**Introduction**

The purpose of this technical memorandum is to provide the New Jersey Department of Environmental Protection (NJDEP) with the proposed Scope of Work (SOW) for additional bedrock investigations being conducted as part of the groundwater Remedial Investigation (RI) at the PPG Garfield Avenue (GA) Group Sites in Jersey City, New Jersey. It is expected that this SOW will be discussed and finalized with NJDEP during technical meetings prior to implementation.

**Proposed Scope of Work**

The proposed bedrock investigation is being implemented in phases using an adaptive management approach pursuant to the revised draft groundwater RI report, which included the following recommendation (AECOM, 2021):

- A limited bedrock investigation should be conducted in the southwestern portion of Site 114 and northern portions of Site 143 and Site 132 to complete the delineation requirements of NJDEP's *Ground Water Technical Guidance for Site Investigation (SI), RI, Remedial Action (RA) Performance Monitoring* (NJDEP, 2012).

The objective of the proposed bedrock investigation is to complete the vertical and horizontal delineation of chromate chemical production waste (CCPW) impacts to bedrock groundwater within the area identified for further investigation in the revised draft groundwater RI report. A site plan showing existing bedrock wells and proposed well and piezometer locations within the investigation area is provided in **Figure 1**. This SOW includes the following activities:

- surface geophysics,
- installation and development of 2 open borehole bedrock wells on Site 114 and Site 132,
- deepening of 3 existing open borehole bedrock wells on Site 114,
- installation, construction, and development of 10 piezometers on Site 114,
- borehole geophysical logging of the newly installed bedrock wells and select existing bedrock wells,
- groundwater elevation gauging,
- packer installation at 114-MW52D,
- groundwater sampling,
- hydraulic testing of bedrock wells,
- FLUTe™ liner installation, and
- data evaluation.

The proposed SOW is consistent with NJDEP's *Ground Water Technical Guidance for SI/RI/RA* (NJDEP, 2012). All drilling work will be conducted in accordance with the New Jersey Administrative Code (N.J.A.C.) 7:9D regulations and will be supervised by an AECOM geologist.

**Surface Geophysics**

A seismic refraction geophysical survey will be performed across Site 114, Site 143, Site 132, Site 137, Site 133, and Site 135 to determine the depth and configuration of the bedrock surface. The seismic refraction data will be integrated with existing bedrock data to provide control points for the seismic survey and to develop an updated top of bedrock surface contour map. The seismic refraction data will also be used to define the contact between the Lockatong Formation and the diabase, if feasible, based on the anticipated velocity contrast between the two rock types.

**Bedrock Well Installation**

Based on borehole geophysical logging data collected at bedrock wells 114-MW4D, 114-MW6D, 114-MW52D, 114-MW57D, 114-MW61D, and 114-MW66D, the following preliminary conclusions can be made regarding the strike and dip of the bedrock:

- The strike direction of the bedding planes of the Lockatong Formation is approximately northeast-southwest. The mean dip azimuth for the bedding of the Lockatong Formation is approximately northwest, with a mean dip angle of approximately 14 to 15 degrees.
- The strike direction of the of the predominant fracture set of the Lockatong Formation is approximately northeast-southwest. The mean dip azimuth for the predominant fracture set of the Lockatong Formation is approximately northwest, with a mean dip angle of approximately 24 to 25 degrees.

- The mean dip azimuth for the predominant fracture set of the diabase is approximately east-southeast, with a mean dip angle of approximately 40 to 41 degrees.
- The strike and dip of the contact between the Lockatong Formation and the diabase is expected to be consistent with that of the bedding planes of the Lockatong Formation.

Based on this understanding of the bedrock structure and the findings presented in the revised draft groundwater RI report, two new bedrock wells will be installed using a combination of sonic and conventional drilling methods. The rationale for each proposed bedrock well is as follows:

- 114-MW71D: To provide horizontal delineation of the diabase unit and underlying Lockatong Formation, down-dip of the Lockatong Formation bedding (northwest) of impacted well 114-MW52D. A cross-section running approximately perpendicular to the predominant strike of the bedding of the Lockatong Formation illustrating the relationship between existing well 114-MW52D and proposed well 114-MW71D is presented on **Figure 2**. The cross-section alignment is shown on **Figure 1**.
- 114-MW72D: To provide horizontal delineation in the Lockatong Formation along the predominant northeast-southwest trending bedding plane strike south of impacted well 114-MW57D and to provide data to refine the bedrock surface south of Carteret Avenue.

At each proposed bedrock well location, the drilling program objectives are to:

- Conduct continuous soil logging from the ground surface to the top of bedrock using sonic drilling methods.
- Determine the top of meadow mat, top of till overlying bedrock, and the depth, thickness, and composition of the till.
- Perform continuous logging of the bedrock by collecting bedrock cores using 2-inch conventional coring equipment (HQ).
- Determine composition of bedrock, including Rock Quality Designation (RQD).
- Complete each borehole as a 6-inch diameter open borehole bedrock well which will be temporarily sealed with a Flute$^{TM}$ liner during data evaluation.

During advancement of the soil borings, continuous soil cores will be collected above and below the meadow mat using sonic drilling methods. Upon reaching the top of bedrock, sonic equipment will be used to advance the borehole through the weathered bedrock to competent rock. Conventional coring equipment will then be used to advance the borehole 10 feet into the competent bedrock. Once this target depth is reached, the borehole will be reamed to 10 inches in diameter and a 6-inch steel casing will be set 10 feet into the competent bedrock (inside the sonic casing) and grouted in place using a Portland cement and bentonite grout slurry. The annular space between the 6-inch steel casing and surrounding native materials will be filled to the ground surface with a Portland cement and bentonite grout slurry from the bottom up using a tremie pipe during removal of the sonic casing. The 6-inch steel casing will extend above the ground surface and the cement and bentonite slurry will be allowed to cure overnight. Additional bedrock coring will follow installation of the 6-inch steel casing.

Bedrock coring will be performed to a depth of up to twenty-five (25) feet below the bottom of the 6-inch steel casing using conventional coring equipment, except at 114-MW71D (situated down-dip along the Lockatong Formation bedding of impacted well 114-MW52D) where the borehole will be advanced up to 25 feet into the Lockatong Formation underlying the diabase. Final borehole depths will be selected based on field observations made during drilling. Upon completion of the bedrock coring, the bedrock borehole will be reamed out (if necessary) so that an open borehole (nominal 6-

inch diameter) remains below the bottom of the 6-inch steel casing. Each bedrock well will be completed with a 3-foot lockable steel stick up.

**Deepening of Existing Bedrock Wells**

Existing open borehole bedrock wells 114-MW4D and 114-MW61D will be deepened by extending each existing open borehole through the diabase and up to 25 feet into the underlying Lockatong Formation to complete horizontal delineation of groundwater impacts at the contact between the diabase and the Lockatong Formation and within the Lockatong Formation. This area is down-dip (along Lockatong Formation bedding) of wells 114-MW57D and 114-MW66D, where groundwater impacts have been identified in the Lockatong Formation. Cross-sections running perpendicular to strike of the bedding of the Lockatong Formation illustrating the relationship between well 114-MW4D and well 114-MW57D, and well 114-MW61D and well 114-MW66D, are presented on **Figure 2**. Cross-section alignments are shown on **Figure 1**. In addition, existing open borehole bedrock well 114-MW66D will be deepened by up to 25 feet to complete vertical delineation of groundwater impacts within the Lockatong Formation at this location. Final borehole depths will be selected based on field observations made during drilling.

**Piezometer Installation**

A total of 10 nested piezometers will be installed within 3 boreholes to assist in the evaluation of vertical hydraulic gradients between the intermediate, deep (including the basal till), weathered bedrock, and competent bedrock water-bearing zones. Piezometers will be paired with existing bedrock wells 114-MW52D, 114-MW57D, and 114-MW66D, and existing wells 114-MW52C (screened in basal till) and 114-MW57C (screened in weathered bedrock), all of which exhibited concentrations of Cr above the NJDEP Groundwater Quality Standard (GWQS).

Paired piezometers will be nested within 10-inch boreholes advanced using sonic drilling techniques. Piezometers will be constructed with either 1.5-inch or 2-inch polyvinyl chloride (PVC) casing and up to 5 feet of 10-slot PVC screen set in the target water-bearing zone for each location, as detailed in **Table 1**. At each boring location, the borehole will be advanced to bedrock and a minimum 5-foot confirmatory bedrock core will be collected using sonic drilling. Final screen intervals will be selected based on field observations made during drilling.

**Bedrock Well and Piezometer Development**

No sooner than 24 hours following installation, the newly installed bedrock wells, the deepened existing wells, and the piezometers will be developed using techniques in accordance with the NJDEP's Field Sampling Procedures Manual (NJDEP, 2005) (FSPM) and PPG's Field Sampling Plan/Quality Assurance Project Plan (FSP-QAPP) (AECOM, 2010).

**Borehole Geophysics**

Geophysical logging will be performed within the open borehole interval of each newly installed bedrock well, and at existing bedrock wells 114-MW4D, 114-MW61D, 114-MW66D following deepening of these boreholes. The following suite of borehole geophysics will be performed at each location:

- acoustic caliper,
- acoustic televiewer (ATV),
- optical televiewer (OTV),
- natural gamma,
- single-point-resistance (SPR),
- spontaneous potential (SP),
- fluid temperature,

- fluid resistivity,
- borehole deviation and
- high resolution heat pulse flow meter (ambient and pumping stressed conditions).

In addition, heat pulse flow meter logging will be performed at wells 114-MW52D and 114-MW57D to evaluate these wells under ambient conditions, as they were previously logged only under stressed conditions. Borehole geophysical logging will be performed by a qualified subcontractor with oversight by an AECOM geologist. Upon completion of the borehole geophysics program, the collected data will be evaluated and target zones for groundwater sampling within each borehole will be selected

**Groundwater Elevation Gauging**

A synoptic round of groundwater elevations will be collected from the newly installed bedrock wells and piezometers, and from select existing monitoring wells, to evaluate bedrock groundwater potentiometry and vertical hydraulic gradients between the intermediate, deep (including the basal till), weathered bedrock, and competent bedrock water-bearing zones. The existing monitoring wells targeted for groundwater elevation gauging are listed on **Table 2** and are identified on **Figure 3**.

**Packer Installation at 114-MW52D**

Additional groundwater sampling will be conducted at existing bedrock well 114-MW52D to complete vertical delineation within this borehole. Previously collected data at this location suggest that Cr-related impacts extend throughout the length of the open borehole, based on samples collected from 81 to 105 feet below top of well casing (ft btwc). However, geophysical logging indicates that flow into the borehole occurs primarily near the top of the open borehole, suggesting that lower intervals may not be impacted. Therefore, a single inflatable packer will be installed in the open borehole at 90 ft btwc to isolate the top and bottom of the borehole. The bottom portion of the borehole will then be purged up to 3 times and a low-flow sample will be collected from this interval in accordance with the NJDEP FSPM and the FSP-QAPP once the well recharges. The sample will be submitted to a NJ-certified laboratory for analysis of total phase hexavalent chromium ($Cr^{+6}$) and total phase Cr, and the data will be validated.

**Groundwater Sampling**

No sooner than 14 days following well development, the newly installed bedrock wells, the deepened portions of existing bedrock wells 114-MW4D, 114-MW61D, and 114-MW66D, and the piezometers completed within weathered bedrock (114-PZ-52WR and 114-PZ-66WR) will be sampled using low-flow sampling protocols as defined in the NJDEP FSPM and the FSP-QAPP.

Groundwater samples will be submitted to a NJ-certified laboratory for analysis of total phase hexavalent chromium ($Cr^{+6}$) and total phase Cr. Field parameters, including depth to water, pH, ORP, dissolved oxygen, temperature, specific conductivity, and turbidity will be recorded in field data collection sheets and groundwater samples will be collected upon stabilization of these parameters as defined in the FSP-QAPP. Upon completion of the groundwater sampling program, the collected data will be validated.

**Hydraulic Testing of Bedrock Wells**

Specific capacity testing will be performed at wells 114-MW52D, 114-MW53C, 114-MW57C, 114-MW57D, 114-MW61C, and 114-MW66D to estimate hydraulic conductivity values for the Lockatong Formation and the diabase in the area where concentrations of Cr above the NJDEP GWQS have been identified in bedrock groundwater. Pressure transducers will be installed in each of these wells during specific capacity testing conducted at individual wells to evaluate potential hydraulic connection between the wells.

### FLUTe™ Liner Installation

Upon completion of the investigation activities described above, the open borehole intervals of each bedrock well will be sealed using a FLUTe™ liner to allow for data evaluation without potential cross-contamination of the bedrock within the open borehole intervals.

### Data Evaluation

The data generated from this SOW will be evaluated and discussed with NJDEP. If the evaluation indicates that vertical and horizontal delineation of CCPW impacts to bedrock groundwater are complete, then PPG will prepare and submit to NJDEP an addendum to the revised groundwater RI report to document the investigation activities and associated findings and conclusions.

### Schedule

The field effort described herein will be executed pending approval of this SOW by NJDEP. The monthly groundwater Gantt chart submittals will reflect the investigation schedule.

**Subject:** [EXTERNAL] RE: PPG - GW RI Bedrock Well Sampling Protocol

Frederick,

Thank you for the explanation and supporting data in Table B-1. Considering the low flow observed from the inflowing fractures, collection of low-flow groundwater samples directly at these inflowing fractures, rather than above and below as recommended by the Guidance, is reasonable. The NJDEP hereby approves the request. (I will upload this correspondence in NJEMS and notify the Weston team.)

Dave

**Subject:** [EXTERNAL] PPG - GW RI Bedrock Well Sampling Protocol

Hi Dave.

As discussed earlier today, AECOM on behalf of PPG intends to collect a single low-flow sample at each inflowing fracture identified via borehole geophysical logging to characterize groundwater quality within the bedrock wells recently completed as part of the ongoing groundwater Remedial Investigation for the Garfield Avenue (GA) Group Sites in Jersey City, New Jersey. This sampling protocol will be applied to the open borehole intervals at newly installed bedrock wells 114-MW71D and 114-MW72D and for the deepened intervals for the existing bedrock wells 114-MW4D, 114-MW61D, and 114-MW66D. As the per bedrock groundwater investigation Scope of Work submitted to New Jersey Department of Environmental Protection on April 21, 2021, the collected samples will be analyzed for total phase hexavalent chromium (Cr+6) and total phase Chromium (Cr).

This sampling protocol deviates from the requirements of Appendix C of the Site Remediation Program Groundwater Technical Guidance. The guidance recommends collecting samples above and below the inflowing fracture in an open-hole section of bedrock, rather than directly at the fracture. The contaminant concentration is then calculated based on the measured vertical flow above and below the inflowing fracture and contaminant concentrations in samples collected above and below the inflowing fracture.

The requirements of Appendix C were previously followed during implementation of the groundwater RI for the collection of samples from bedrock wells in February 2021. Results from these activities were included in Appendix B of the final groundwater RI report submitted to NJDEP on August 31, 2021 and are attached to this email (see attached Table B-1). These results demonstrate that there is no significant difference between the concentrations of samples collected above and below inflowing fractures and the calculated concentration for the fracture. The flow observed in the newly completed and deepened bedrock wells is very low, similar to the low flow rates observed in the previously completed bedrock wells. We expect that there will be no significant difference between the concentrations for samples collected above and below inflowing fractures and the calculated concentration for the associated inflowing fracture due to the low flow rates and similar conditions in the new wells. We have concluded that collection of low-flow groundwater samples directly at the inflowing fractures is an appropriate method for sampling the new bedrock wells, rather than sampling above and below the fracture as recommended by the Guidance.

Best regards,

---

**Notes:**

[1]Results reported are for total fraction (unfiltered)

[2]Concentrations at inflowing fractures calculated in accordance with Appendix C of Groundwater Technical Guidance: Site Investigation, Remedial Investigation, Remedial Action Performance Monitoring, Site Remediation Program, NJDEP, April 3, 2012.

For non-detected results, the laboratory detection limit was used as the sample chromium concentration for calculation of chromium concentration at target inflowing fracture.

The following sample intervals exhibited non-detect chromium levels, with a reporting limit of 2.0 micrograms per liter: 114-MW61D at 106.5 ft btc and 114-MW61D at 110 ft btc.

For depth intervals where no flow was detected by the heat pulse flow meter but the geophyiscal logging results indicated possible minor flow into the borehole, a flow rate of of 0.01 gallons per minute was assigned to the interval.

**Abbreviations:**

bTOC - below top of inner casing
ft - feet
gpm - gallons per minute
NAVD88 - North American Vertical Datum of 1988
NJDEP - New Jersey Department of Environmental Protection
ug/L - micrograms per liter

| Categories: | Yellow Category |

As discussed during the January 19, 2022 Principals' Call, and on behalf of PPG, AECOM is providing the following for information purposes, only:

- Attached file, which includes a table (Table 1) summarizing the bedrock well installation and sampling data from the Sept-Dec 2021 Bedrock Field Investigation and a figure (Figure 1) showing the bedrock well locations; and
- Summary of additional Bedrock Field Investigation to occur in 2022 (below).

*2022 Bedrock Field Investigation Summary*

Bedrock Well Installation, Development, and Geophysics: One new bedrock well (114-MW73D) will be installed on Site 132 using sonic and/or conventional drilling methods to provide horizontal delineation in the Lockatong Formation along the predominant northeast-southwest trending bedding plane strike south of impacted well 114-MW72D. No sooner than 24 hours following installation, the newly installed bedrock well will be developed using techniques in accordance with the NJDEP's Field Sampling Procedures Manual (NJDEP, 2005) (FSPM) and PPG's Field Sampling Plan/Quality Assurance Project Plan (FSP-QAPP) (AECOM, 2010). Geophysical logging will be performed within the open borehole interval of the newly installed bedrock well. The same suite of borehole geophysics will be performed at each location as was conducted for the Sept-Dec 2021 Bedrock Field Investigation.

Groundwater Elevation Gauging and Sampling: No sooner than 14 days following well development, the newly installed open hole bedrock well will be sampled using low-flow sampling protocols as defined in the NJDEP FSPM and the FSP-QAPP. Groundwater samples will be submitted to a NJ-certified laboratory for analysis of total phase Cr+6 and total phase Cr. Field parameters, including depth to water, pH, ORP, dissolved oxygen, temperature, specific conductivity, and turbidity will be recorded on field data collection sheets and groundwater samples will be collected upon stabilization of these parameters as defined in the FSP-QAPP. Upon completion of the groundwater sampling program, the collected data will be validated. Prior to sampling activities, a synoptic round of groundwater elevations will be collected from the newly installed bedrock well and existing bedrock wells to evaluate bedrock groundwater potentiometry. The wells targeted for groundwater elevation gauging include: 114-MW16B, 114-MW4D, 114-MW52D, 114-MW57D, 114-MW61D, 114-MW66D, 114-MW6D, 114-MW7D, 114-MW71D, 114-MW72D, and 114-MW73D.

Resampling of Bedrock Well 114-MW61D: The open borehole interval at well 114-MW61D was extended to 135 feet (ft) below ground surface (bgs) in November 2021 to complete horizontal delineation of groundwater impacts at the contact between the diabase and the Lockatong Formation, and within the Lockatong Formation, in the area down-dip (along Lockatong Formation bedding) of well 114-MW66D where groundwater impacts have been identified in the Lockatong Formation. Due to instability of the borehole (highly weathered/fractured rock causing borehole cave-in), well 114-

MW61D was completed with 2-inch polyvinyl chloride (PVC) casing and a 25-foot section of 10-slot PVC screen set from 110 to 135 ft bgs. Based on samples collected from well 114-MW61D in February 2021 (from 88 to 110 ft below top of well casing [btwc]) and in December 2021 (from 117 to 135 ft btwc), all intervals sampled exhibit Cr concentrations below the GWQS for Cr of 70 µg/L except for one field duplicate sample collected at 130.8 ft btwc where Cr was detected at 88.3 µg/L. Based on these findings, the result for the 130.8 depth interval seems anomalous and this interval will be re-sampled and compliance averaging will be used to complete delineation at this location. Well 114-MW61D will be sampled at 130.8 ft btwc using low-flow sampling protocols as defined in the NJDEP FSPM and the FSP-QAPP. Two samples will be collected, one month apart, to allow for compliance averaging. Groundwater samples will be submitted to a NJ-certified laboratory for analysis of total phase Cr. Field parameters, including depth to water, pH, ORP, dissolved oxygen, temperature, specific conductivity, and turbidity will be recorded in field data collection sheets and groundwater samples will be collected upon stabilization of these parameters as defined in the FSP-QAPP.

Multi-port Water FLUTe™ System Installation: Multi-port Water FLUTe™ systems will be installed at bedrock wells 114-MW52D, 114-MW66D, and 114-MW72D to conduct depth-discrete multilevel groundwater sampling within the boreholes to complete vertical delineation at these locations. Previously collected data at well 114-MW52D suggested that Cr-related impacts extended throughout the length of the open borehole, based on samples collected in February 2021 from 81 to 105 feet below top of well casing (ft btwc) which exhibited Cr concentrations ranging from 42,200 to 46,500 micrograms per liter (µg/L). However, a sample collected at 114-MW52D in December 2021 from a depth of 104 ft btwc, after installation of a packer at 100 ft btwc to isolate the bottom 5-foot section of the open borehole, exhibited a Cr concentration of 5,630 µg/L demonstrating that Cr concentrations attenuate with depth within the borehole. During sampling of the packered interval, it was difficult to fully purge the isolated portion of the open borehole due to the extremely low yield for this portion of the well (heat pulse flow meter logging showed no measurable flow in the borehole below 90 feet). Therefore, it is likely that the sample collected at 104 ft btwc exhibited residual Cr concentrations associated with impacted groundwater remaining within the borehole which could not be removed during purging. A similar condition is expected at wells 114-MW66D and 114-MW72D, where heat pulse flow meter logging showed no measurable flow at 114-MW66D below 125 feet and no measurable flow at 114-MW72D below 106 feet. The Multi-port Water FLUTe™ systems will be installed to allow for the collection of groundwater samples at fracture intervals identified within the boreholes based on geophysical logging and at the bottom of each borehole. The collected samples will be submitted to a NJ-certified laboratory for analysis of total phase Cr+6 and total phase Cr and the data will be validated.

Contingency Bedrock Well Installation to Achieve Vertical Delineation: Should the Multi-port Water FLUTe™ program not achieve vertical delineation, one new bedrock well will be installed next each of the existing bedrock wells 114-MW52D, 114-MW66D, and 114-MW72D for a total of three new bedrock wells (114-MW74D, 114-MW75D, 114-MW76D). Proposed contingency well locations are depicted on Figure 1.

Data Evaluation: The data generated will be evaluated. If the evaluation indicates that vertical and horizontal delineation of CCPW impacts to bedrock groundwater are complete, then PPG will prepare an addendum to the revised groundwater RI report to document the investigation activities and associated findings and conclusions.

Anticipated Schedule:

- Installation of the Multi-port Water FLUTe™ System is expected in March 2022;
- Installation of new bedrock wells, geophysics, elevation gauging and groundwater sampling are expected to occur between April and June 2022;
- Laboratory analysis and data validation are expected to occur in July 2022; and
- Preparation and submittal of the RIR Addendum for Bedrock is expected by the end of August 2022.

**Notes:**
-- = not applicable
* = denotes depth interval at which a field duplicate sample was collected
bgs = below ground surface
btwc = below top of well casing
Cr = total chromium
$Cr^{+6}$ = hexavalent chromium
ft = feet
gal = gallons
NA = not applicable
NAD83 = North American Datum of 1983
NAVD88 = North American Vertical Datum of 1988
NE = not encountered
NTU = Nephelometric Turbidity Units
PVC = polyvinyl chloride
ug/L = micrograms per liter

**Data validation qualifiers:**
J = Indicates the result was an estimated value; the associated numerical value was an approximate concentration of the analyte in the sample.
J+ = Indicates the analyte was positively identified; the associated numerical value is an estimated quantity with a potential high bias.
JB = The analyte concentration is greater than three (3) times, but less than or equal to ten (10) times the concentration in the associated method/prep blank. The presence of that analyte in the sample is considered "real." The concentration is quantitatively qualified (JB) due to method blank contamination.
U = Indicates the analyte was not detected in the sample above the sample reporting limit.
UB = The analyte concentration is less than or equal to three (3) times the concentration in the associated method/prep blank. The presence of the analyte in the sample is negated (UB) due to laboratory contamination.

2. Vertical Elevations are in North American Vertical Datum of 1988 (NAVD88), U.S. Survey Feet.
3. Parcels of Hudson County, New Jersey State Plane NAD83, Hudson County Department of Planning, Jersey City, New Jersey, May 21, 2013.

**Notes:**

1. Data used to develop the interpreted top of bedrock surface was obtained from historical investigations conducted by PPG and Public Service Electric and Gas Company (PSEG), as well as bedrock investigations and monitoring well installations on Site 114 as part of the groundwater remedial investigation.
2. The bedrock type for 114-MW7D, B-1, and B-2 is noted as indeterminate based on review of Project Area data and published bedrock geology for this area. Information for the bedrock interval noted on the boring logs for these wells is inconsistent with the information compiled for the Project Area.

## Introduction

This Technical Memorandum presents the results of borehole geophysical logging conducted as part of the groundwater Remedial Investigation (RI) at the Garfield Avenue (GA) Group Sites in Jersey City, New Jersey. Borehole geophysical logging was conducted in the open bedrock portions of the boreholes for wells 114-MW4D and 114-MW6D on September 22, 2020 and at wells 114-MW52D, 114-MW57D, 114-MW61D, and 114-MW66D from January 14 to 15, 2021. Borehole geophysical logging was conducted by Hager-Richter Geoscience, an AECOM subcontractor. Borehole geophysical logging reports are included in Attachment 1.

Borehole geophysical logging included the following at each location:

- Optical Televiewer (OTV) - ALT QL40-OBI-2G optical televiewer
- Acoustic Televiewer (ATV) - ALT QL40-ABI-2G acoustic televiewer
- Acoustic Caliper - ALT QL40-ABI-2G acoustic televiewer
- Natural Gamma - Mount Sopris 2PGA-1000 poly-gamma probe
- Spontaneous Potential (SP) - Mount Sopris 2PGA-1000 poly-gamma probe
- Single Point Resistance (SPR) - Mount Sopris 2PGA-1000 poly-gamma probe
- Fluid Temperature - Mount Sopris QL40-FTC fluid temperature and conductivity/resistivity probe
- Fluid Conductivity - Mount Sopris QL40-FTC fluid temperature and conductivity/resistivity probe
- Heat Pulse Flow Meter (HPFM) Under Ambient Conditions - Mount Sopris HFP-2293 heat pulse flow meter
- HPFM Under Stressed (Low Constant Rate Pumping) Conditions - Mount Sopris HFP-2293 heat pulse flow meter

A Mount Sopris Matrix portable digital logging system with a 4MXA-1000 winch was used to conduct the borehole geophysical logging. Results and key findings for each logged borehole are presented in the following sections.

## Borehole Geophysical Logging Results

### 114-MW4D

The open borehole at well 114-MW4D was logged from the bottom of the 6-inch steel casing to the bottom of the open borehole, approximately 85.5 to 105 feet (ft) below the top of the 6-inch steel casing (btc). Results of the borehole geophysical logging show a high density of fracturing along the length of the logged interval, as indicated by the OTV and ATV logs and high degree of variability in the acoustic caliper log. Natural gamma response slightly increases with depth but does not show repeatable increases and decreases that would be indicative of sedimentary layering. No flow was detected in the ambient and stressed HPFM, indicating that this highly fractured zone is relatively inactive. The fluid temperature log shows a generally linear decrease in temperature with depth and small perturbations in the log at 86 and 91 ft btc. SPR and SP logs indicate potential minor activity with lower SPR and slight increases in SP at the features identified at 87 and 91 ft btc. Similarly, minor fluctuations in the fluid conductivity log between 91 and 98 ft btc may be associated with the features identified at 91 and 95.5 ft btc. These perturbations may be indicative of minor flow in the borehole. The SPR tool measures the resistance between the sensor in the borehole and the surface. The SPR response decreased from 87 to 91 ft btc, which may be indicative of a higher degree of weathering or fracturing within this interval. Overall, the conditions in the open-borehole at 114-MW4D appear to be highly fractured with very limited flow over the logged interval. Based on the borehole geophysical logging and Site knowledge, the bedrock in this well is consistent with diabase.

### 114-MW6D

The open borehole at well 114-MW6D was logged from the bottom of the 6-inch steel casing to the bottom of the open borehole, approximately 85.5 to 110.5 ft btc. The OTV and ATV logs identify foliations or layered sedimentary lithology along the length of the borehole. No flow was detected in the ambient and stressed HPFM, indicative of no active flowing features in the borehole. Fluid temperature variation is extremely limited in the log (<0.2 degrees Fahrenheit), with a general increase in temperature with depth. Natural gamma is variable, showing peaks in specific layers which is consistent with sedimentary lithology where finer-grained materials would be deposited. Since there was no detected flow in the borehole, variability in SP and SPR are more likely attributable to lithology changes than to fractures or flow. Small variations in the fluid conductivity log are evident at 89.5 and 95.5 ft btc, which could potentially be contributing to minor flow below the resolution of the HPFM. Based on the borehole geophysical logging and Site knowledge, the bedrock is sedimentary rock consistent with the Lockatong formation.

### 114-MW52D

The open borehole at well 114-MW52D was logged from the bottom of the 6-inch steel casing to the bottom of the open borehole, approximately 80.5 to 107 ft btc. The OTV and ATV logs identify foliations or layered sedimentary lithology along the length of the borehole. Features identified in the ATV logs are generally characterized as bedding features or minor fractures (not distinct or continuous around the borehole). One fracture identified at 81.3 ft btc was classified as an intermediate fracture (distinct and continuous around the borehole with little apparent aperature). HPFM data was collected under stressed conditions imposed by slow water level recovery after well development, which occurred the day before geophysical logging. Two fracture sets appeared to be recharging the borehole under the stressed conditions. One set from the bottom of the casing to about 83 ft btc includes the more prominent fracture described above at 81.3 ft btc. The second set has a steeply dipping fracture at approximately 85.2 ft btc and two smaller fractures at 86.2 and 86.3 ft btc. Bedding features occur below this second set of fractures between 86.4 and 96.6 ft btc.

Minor fractures are also noted from 98 ft btc to the bottom of the borehole but no flow is evident based on the HPFM, fluid temperature, or fluid conductivity logs. The bedrock is sedimentary rock consistent with the Lockatong formation.

**114-MW57D**

The open borehole at well 114-MW57D was logged from the bottom of the 6-inch steel casing to the bottom of the open borehole, approximately 86.5 to 113.5 ft btc. The OTV and ATV logs identify foliations of layered sedimentary lithology along the length of the borehole with the majority of the features representing bedding and minor fractures that dip at a shallow angle to the northwest. Similar to well 114-MW52D, this well was logged while water levels were recovering from well development that occurred the previous day. Therefore the HPFM data that was collected simulated stressed conditions. HPFM indicated active recharge occurring in a fracture set between the bottom of the casing and 89 ft btc. These fractures are minor to intermediate fractures that dip at high angles toward the northwest. Fluid temperature and conductivity logs show inflections indicative of active features. No flow was detected by the HPFM below 90 ft btc. However, there is an inflection point in the fluid conductivity at about 100 ft btc associated with an increase in natural gamma and a steeply dipping intermediate fracture that may indicate minor flow into the borehole. This intermediate fracture is sub vertical with a dip direction toward the southeast. There was no flow detected by the HPFM below 100.5 ft btc. Variation in the SP log below this point is likely due to geochemical variation rather than fracture flow. This conclusion is based primarily on bedding and minor fractures being present, with no significant changes in the fluid temperature or conductivity logs. The SPR log shows gradual changes along the entire depth profile without significant/abrupt changes indicative of discrete open fractures. The bedrock is sedimentary rock consistent with the Lockatong formation.

**114-MW61D**

The open borehole at well 114-MW61D was logged from the bottom of the 6-inch steel casing to the bottom of the open borehole, approximately 87.5 to 110 ft btc. The OTV and ATV logs identify a highly fractured environment without clear bedding structure, indicative of weathered/weak bedrock. The caliper log indicates variability in the borehole diameter throughout the depth profile confirming a weak/highly fractured environment. The HPFM data was collected prior to the borehole hydraulic conditions stabilizing from well development the previous day. Therefore, the HPFM data collected is analogous to logging under pumped or stressed conditions. The HPFM detected flow in the interval between the bottom of the casing and 93 ft btc. Three or four major fractures (distinct and continuous around the borehole with apparent aperature) were observed in this depth interval on the OTV and ATV logs. There are numerous minor to intermediate fractures throughout the length of the borehole. A slight inflection in the fluid temperature log at 95.5 ft btc that may indicate very minor flow. Three major fractures located between 102.5 and 104.5 may be exhibiting minor flow based on slight deflections in the fluid temperature and conductivity logs. One major fracture at 109.5 ft btc near the bottom of the borehole may have minor flow into the borehole based on slight fluid conductivity increases. Natural gamma appears to increase with increasing depth. However, there are no indications of discrete layers normally observed in sedimentary rock. The SP and SPR logs show variability in this highly fractured/weathered environment but do not correlate with discrete features. The geophysical logs and Site knowledge indicate that the bedrock in this well is weathered diabase.

**114-MW66D**

The open borehole at well 114-MW66D was logged from the bottom of the 6-inch steel casing to the bottom of the open borehole, approximately 92 to 114.5 ft btc. The OTV and ATV logs identify foliations or layered sedimentary lithology along the length of the borehole with the majority of the features representing bedding and minor fractures that dip at a shallow angle to the northwest. More steeply dipping intermediate fractures, dipping toward the east were observed at 95.5, 97.5, 104, 107.5, 110, and 114 feet btc. The HPFM data was collected under stressed conditions due to prior day well development. The borehole was observed to be recharging with contribution attributed to a major fracture near the bottom of the casing. Fluid conductivity increases at this depth, with corresponding low SPR and high SP, are indicative of a major fracture with flowing water. While not indicated on the HPFM or fluid logs, an increase in SP with a decrease in SPR may indicate a feature of interest at 100 ft btc, where the ATV identified a minor fracture above bedding features. The HPFM data show minor fractures at about 110 and 111 ft btc, where low flow was observed. The bedrock is sedimentary rock consistent with the Lockatong formation.

**Key Findings**

Wells 114-MW6D, 114-MW52D, 114-MW57D, and 114-MW66D were installed in the sedimentary unit identified as the Lockatong Formation at the Site. In general, the bedding and primary fracture features have shallow dipping angles on the order of 10 to 20 degrees toward the northwest. A secondary set of fractures dip more steeply (60 to 80 degrees) to the southeast. Bedding dip azimuth is 299 degrees northwest. The majority of flow observed in these wells was observed within the top 10 ft of the borehole, but some minor fractures with very low flow were identified at greater depths based on smaller perturbations in the logs as described for each well.

Wells 114-MW4D and 114-MW61D were installed in the Jurassic Diabase unit. Regional bedrock geology maps identify this unit west of the Site, but based on drill logs and borehole geophysical logging, the boundary of this unit is farther east than indicated on the United States Geological Survey maps. The Jurassic Diabase is highly fractured without coherent structure, and fracture dip angles tend to be steeper than the sedimentary unit with the majority of fractures dipping in an easterly direction. Active fractures were identified in shallow portions of the logged hole where minor flow was present. The diabase is highly fractured and weak rock in the wells that were logged.

## Bedrock Well Sampling

Sampling of bedrock wells 114-MW52D, 114-MW57D, 114-MW61D, and 114-MW66D was performed from February 9 to 15, 2021 in accordance with Appendix C (Depth-Discrete Sampling and Profiling of Vertical Cross-Flows) of the New Jersey Department of Environmental Protection (NJDEP) *Groundwater Technical Guidance* (NJDEP, 2012). Selection of final sample intervals was completed upon review of preliminary geophysical logging results and approved by NJDEP during a technical meeting held on January 26, 2021. Results of the bedrock well sampling program are presented on Table B-1.

**Notes:**

[1]Results reported are for total fraction (unfiltered)

[2]Concentrations at inflowing fractures calculated in accordance with Appendix C of Groundwater Technical Guidance: Site Investigation, Remedial Investigation, Remedial Action Performance Monitoring, Site Remediation Program, NJDEP, April 3, 2012.

For non-detected results, the laboratory detection limit was used as the sample chromium concentration for calculation of chromium concentration at target inflowing fracture.

The following sample intervals exhibited non-detect chromium levels, with a reporting limit of 2.0 micrograms per liter: 114-MW61D at 106.5 ft btc and 114-MW61D at 110 ft btc.

For depth intervals where no flow was detected by the heat pulse flow meter but the geophyiscal logging results indicated possible minor flow into the borehole, a flow rate of of 0.01 gallons per minute was assigned to the interval.

**Abbreviations:**

bTOC - below top of inner casing
ft - feet
gpm - gallons per minute
NAVD88 - North American Vertical Datum of 1988

|  | Fracture Rank 2 (Blue) | Intermediate Fracture - distinct and continuous around the borehole with little or no apparent aperture |
|  | Fracture Rank 3 (Red) | Major Fracture - distinct and continuous around the borehole with apparent aperture |

**Figure 1.** Key to bedrock structure categories.

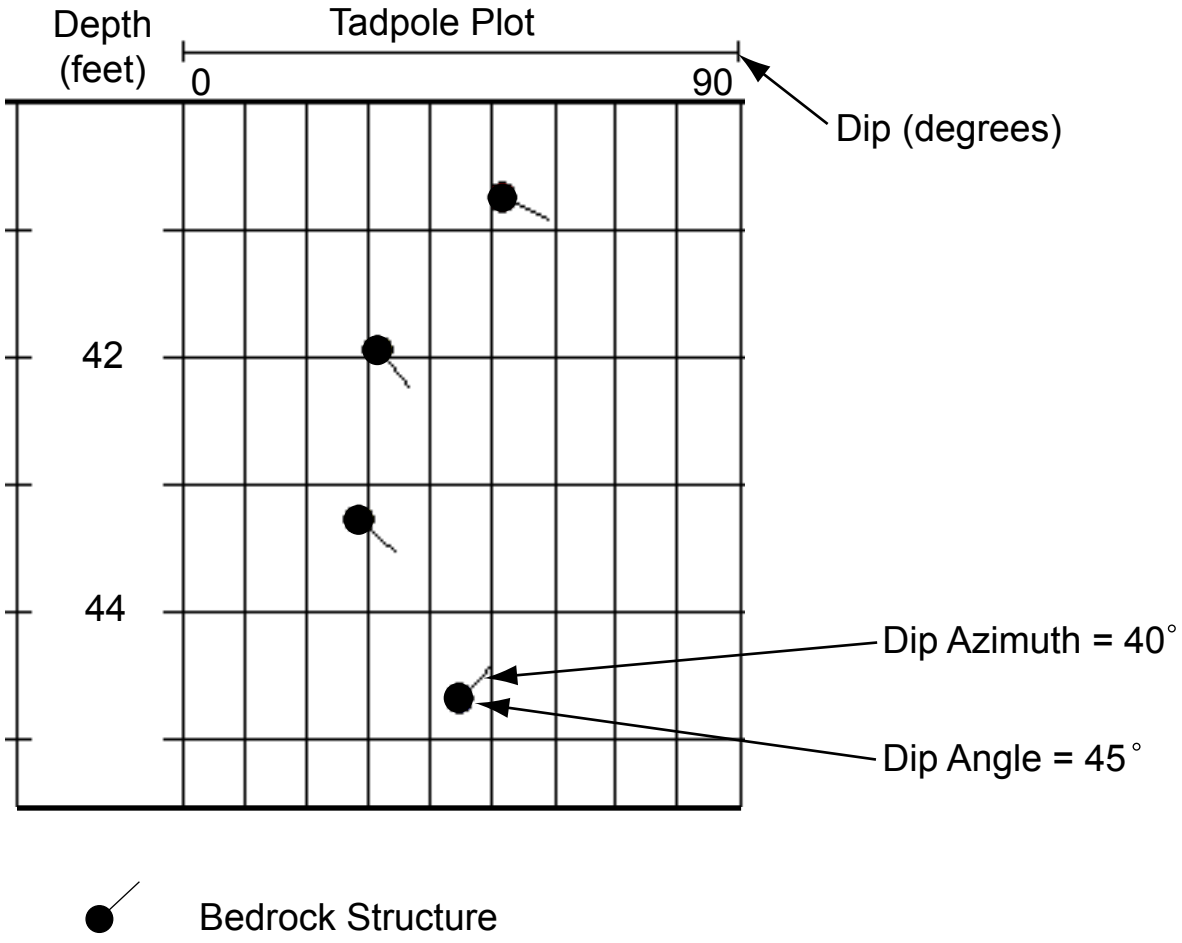

**Figure 2.** Tadpole plot explanation. The orientation of the bedrock structures is graphically displayed by a tadpole consisting of a circle, the head, and a line, the tail. The position of the head, left to right on the tadpole plot, gives the dip angle of the structure. The left side of the track indicates a dip angle of 0°, and the right side of the track indicates a dip angle of 90° from horizontal. The orientation of the tail gives the dip azimuth of the structure and can be read like a compass. The tail pointing directly up is 0°, north.

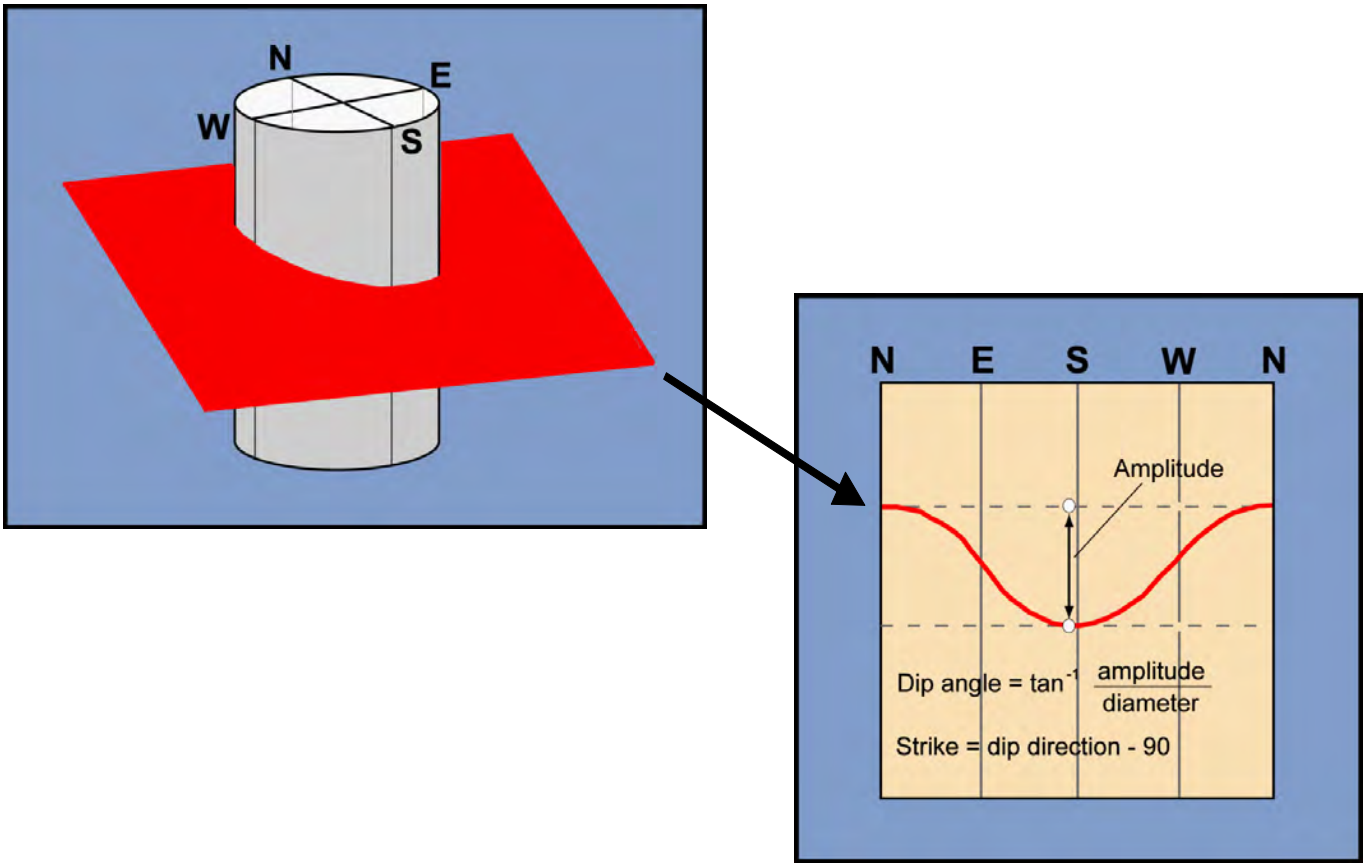

**Figure 3.** Televiewer explanation. The image on the left depicts a planar structure in red, such as a fracture or bedding plane, intersected by a borehole. The image on the right depicts the same structure unwrapped as it would be displayed in an optical televiewer (OTV) or acoustic televiewer (ATV) log.

Figure modified from: Garfield, R.L., Day-Lewis, F.D., Gray, M.B., Johnson, C.D., Williams, J.H. and Day-Lewis, A.D.F., 2003, Fractured-Rock Aquifer Characterization within a Regional Geologic Context: Results from the Bucknell University Hydrogeophysics Test Site, GSA Northeastern Section, 38th Annual Meeting, Paper No. 25-19.

Attached please find the data report for the borehole geophysical logging conducted in boreholes 114-MW4D and 114-MW6D at the PPG Site 114 – Garfield Avenue Group Sites in Jersey City, New Jersey. The data report consists of the borehole geophysical logs, bedrock structure statistics plots, tables of bedrock structures, and the borehole geophysical logging figures. The tables of bedrock structures are also provided in Microsoft Excel format for your use.

The borehole geophysical logging program consisted of the following in the of the logged boreholes:

- Optical Televiewer (OTV)
- Acoustic Televiewer (ATV)
- Acoustic Caliper
- Natural Gamma Ray
- Spontaneous Potential (SP)
- Single Point Resistance (SPR)
- Fluid Temperature
- Fluid Conductivity
- Heat Pulse Flow Meter (HPFM) Under Ambient Conditions
- HPFM Under Stressed (Low Constant Rate Pumping) Conditions

Explanation of the Borehole Geophysical Data Interpretation and Presentation

The datum for depths in this report is the top of the steel casing at the location of each borehole. The depths of bedrock structures are reported as the average depths of the top and bottom intersections of the bedrock structures and the borehole wall. The orientations of bedrock structures are reported as the dip azimuth (dip direction) and dip angle of each structure, as shown in the Televiewer Explanation Figure. The OTV, ATV, and bedrock structure dip azimuth data are referenced to true north using a magnetic declination of 12.8° west and the bedrock structure dip angle data are reported from horizontal. Please note that the bedrock structure dip azimuth data are perpendicular to strike as used commonly by geologists.

Bedrock structures detected in the televiewer (OTV & ATV) data are grouped into four categories (Fracture Rank 1, Fracture Rank 2, Fracture Rank 3, and Bedding) and are shown as color-coded lines and symbols on the structure projection plots and tadpole plots. The Key to Bedrock Structure Categories figure describes the bedrock structure categories and associated colors and tadpole shapes. The Tadpole Explanation Figure explains how to "read" the tadpole plots. Fracture Rank 1 consists of minor fractures that are not distinct and may not be continuous around the borehole. Fracture Rank 2 consists of intermediate fractures that are distinct and continuous around the borehole with little or no apparent aperture. Fracture Rank 3 consists of major fractures that are distinct and continuous around the borehole with apparent aperture. The Bedding category consists of planar geologic structures in the bedrock interpreted as bedding.

The data report consist of the following.

- Borehole Geophysical Logging Figures

  Figure 1. Key to bedrock structure categories
  Figure 2. Tadpole plot explanation figure
  Figure 3. Televiewer explanation figure

- Borehole Geophysical Logs – The borehole geophysical logs are provided at a scale of 1-inch to 2.5-feet, meant to be printed on portrait 11" x 17" paper, and consist of the following.

| Track # | Log & Description |
|---|---|
| 1. | OTV Image |
| 2. | Depth |
| 3. | ATV Amplitude |
| 4. | ATV Travel Time<br>Structure Projection – bedrock structure interpretation plotted in projection view |
| 5. | Acoustic Caliper – borehole diameter in inches<br>Tadpole Plot – bedrock structure interpretation plotted as tadpoles |
| 6. | Natural Gamma Ray, SP, & SPR |
| 7. | Depth |
| 8. | Fluid Temperature & Fluid Conductivity |
| 9. | HPFM Under Ambient & Pumping Conditions<br>Borehole Flow Interpretation |

- Bedrock Fracture Statistics Plots for 114-MW4D – The statistics plots include all detected bedrock fractures in borehole 114-MW4D, are meant to be printed on landscape 11" x 17" paper, and consist of the following:

| Track # | Description |
|---|---|
| 1. | Stereogram of Fractures – poles of fractures plotted on an equal area lower hemisphere stereogram |
| 2. | Contoured Stereogram of Fractures – contours of poles of fractures plotted on an equal area lower hemisphere stereogram |
| 3. | Dip Azimuth Rose Diagram of Fractures |
| 4. | Dip Angle Histogram of Fractures |

- Bedrock Structure Statistics Plots for 114-MW6D – The statistics plots consist of all detected bedrock structures in borehole 114-MW6D, are meant to be printed on landscape 11" x 17" paper, and consist of the following.

| Track # | Description |
|---|---|
| 1. | Stereogram of Fractures – poles/contours of fractures plotted on an equal area lower hemisphere stereogram |
| 2. | Dip Azimuth Rose Diagram of Fractures |
| 3. | Dip Angle Histogram of Fractures |
| 4. | Stereogram of Bedding – poles/ contours of bedding plotted on an equal area lower hemisphere stereogram |
| 5. | Dip Azimuth Rose Diagram of Bedding |
| 6. | Dip Angle Histogram of Bedding |

- Tables of Bedrock Structures – The tables of bedrock structures consist of all detected bedrock structures (fractures & bedding) in each borehole individually, are meant to be printed on standard portrait 8.5" x 11" paper, and consists of the following:

| Column # | Description |
|---|---|
| 1. | Depth |
| 2. | Bedrock Structure Dip Azimuth |
| 3. | Bedrock Structure Dip Angle |
| 4. | Bedrock Structure Category |

Summary of Borehole Flow

Flow was not detected in boreholes 114-MW4D or 114-MW6D with the HPFM under ambient or under pumping conditions. However, possible minor flow was detected in borehole 114-MW4D at the following depth interval.

- 85.5 – 87.7 feet (fractures at/near the bottom of casing):
  - possible minor flow into or out of the borehole based on the fluid temperature data

Summary of Bedrock Results

Based on the borehole geophysical logging data from the two logged boreholes, the bedrock encountered in borehole 114-MW4D appears to be igneous bedrock, possibly diabase based on information provided by AECOM; and the bedrock encountered in borehole 114-MW6D appears to be sedimentary bedrock, likely from the Lockatong Formation based on information provided by AECOM. The bedrock structure orientations and statistics are plotted and reported on the borehole geophysical logs, the bedrock structure statistics plots, and the bedrock structure tables.

114-MW4D. Based on the televiewer (OTV & ATV) data, the bedrock in 114-MW4D is highly fractured with many moderately to steeply dipping bedrock fractures, has no evidence of bedding, and has low gamma radiation (~30 cps) compared to borehole 114-MW6D. The most prominent orientation of bedrock fractures detected in borehole 114-MW4D has a dip azimuth to the east-southeast of 90° - 105° and a moderate dip angle of 25° - 45° from horizontal.

114-MW6D. Based on the televiewer data, the bedrock in 114-MW6D is relatively unfractured with the most prominent orientation of bedrock fractures being approximately parallel to the bedrock bedding evident in the bedrock. The bedrock in 114-MW6D also has much higher gamma radiation (~150-400 cps) as one would expect in the siltstones and mudstones found in the Lockatong formation. The most prominent orientation of bedding and bedrock fractures detected in borehole 114-MW6D has a dip azimuth to the northwest of 300° - 330° and a shallow dip angle of 0° - 20° from horizontal. A second, but significantly less prominent, bedrock fracture set was also detected in borehole 114-MW6D with is a dip azimuth to the southeast of 120° - 135° and a steep dip angle of 70° - 85° from horizontal.

The number of bedrock fractures and bedding detected and the most prominent orientations (dip azimuths and dip angles) of these bedrock fractures and bedding are reported in the tables below.

Summary of Bedrock Fracture Statistics

| Borehole ID | Number of Structures | Most Prominent Bedrock Fracture Dip Azimuths | Most Prominent Bedrock Fracture Dip Angles |
|---|---|---|---|
| 114-MW4D | 95 | east-southeast (90° - 105°) | 25° - 45° from horizontal |
| 114-MW6D | 38 | primary: northwest (300° - 330°)<br>secondary: southeast (120° - 135°) | 0° - 20° from horizontal<br>70° - 85° from horizontal |

Summary of Bedrock Bedding Statistics

| Borehole | Number of | Most Prominent Bedrock | Most Prominent Bedrock |
|---|---|---|---|

| ID | Structures | Bedding Dip Azimuths | Bedding Dip Angles |
|---|---|---|---|
| 114-MW4D | no bedding in igneous bedrock | | |
| 114-MW6D | 33 | northwest (285° - 315°) | 10° - 15° from horizontal |

| Tadpole | Structure Category (Symbol Color) | Description |
|---|---|---|
|  | Bedding (Brown) | Planar geologic feature interpreted as bedding |
|  | Fracture Rank 1 (Light Blue) | Minor Fracture - not distinct and may not be continuous around the borehole |
|  | Fracture Rank 2 (Blue) | Intermediate Fracture - distinct and continuous around the borehole with little or no apparent aperture |
|  | Fracture Rank 3 (Red) | Major Fracture - distinct and continuous around the borehole with apparent aperture |

**Figure 1.** Key to bedrock structure categories.

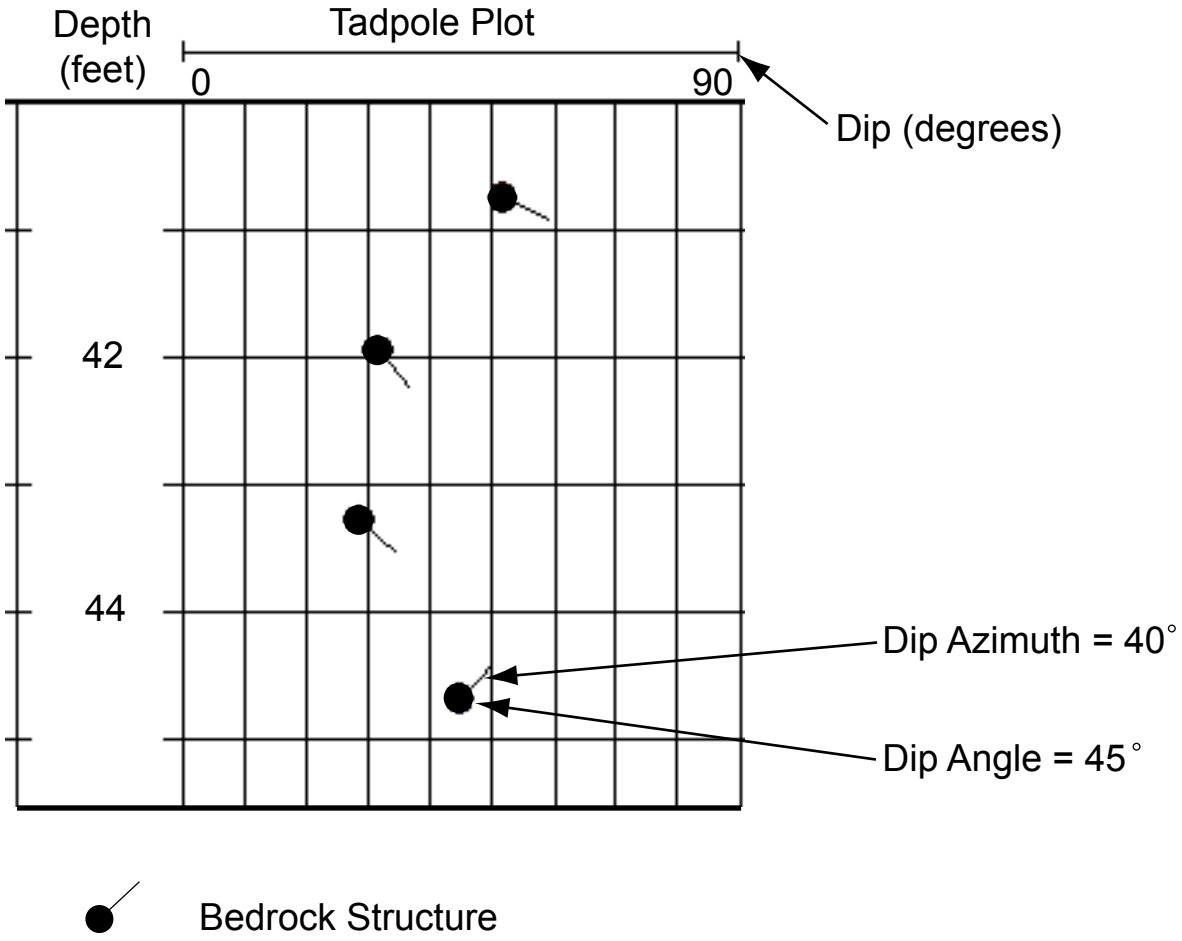

**Figure 2.** Tadpole plot explanation. The orientation of the bedrock structures is graphically displayed by a tadpole consisting of a circle, the head, and a line, the tail. The position of the head, left to right on the tadpole plot, gives the dip angle of the structure. The left side of the track indicates a dip angle of 0°, and the right side of the track indicates a dip angle of 90°from horizontal. The orientation of the tail gives the dip azimuth of the structure and can be read like a compass. The tail pointing directly up is 0°, north.

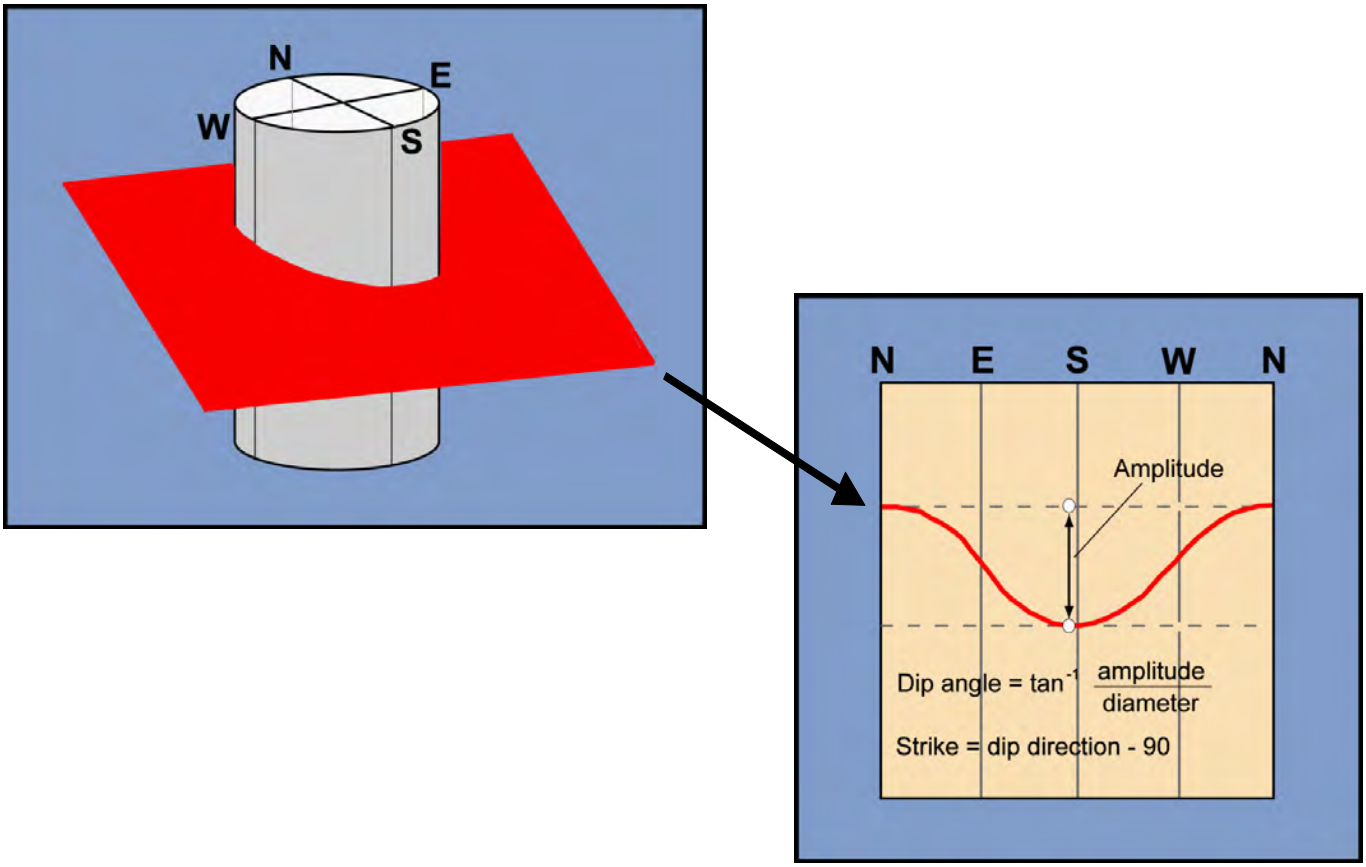

**Figure 3.** Televiewer explanation. The image on the left depicts a planar structure in red, such as a fracture or bedding plane, intersected by a borehole. The image on the right depicts the same structure unwrapped as it would be displayed in an optical televiewer (OTV) or acoustic televiewer (ATV) log.

NOTES: The borehole was developed the day before logging. The pumping associated with the development of the borehole caused the water level to drop in the borehole. At the time of logging the borehole the day after development, water was still rising (recovering) in the borehole at a rate of ~0.02 gpm. Because water was still filling the borehole at the time of logging, the borehole was under stressed conditions during the HPFM logging. When water in a borehole is rising/recovering during HPFM logging, the conditions mimic acquiring HPFM data under pumping conditions.

Attached please find the data report for the borehole geophysical logging conducted in the 4 boreholes listed below at the PPG Site 114 – Garfield Avenue Group (GAG) Sites in Jersey City, New Jersey on January 14 and 15, 2021. The data report consists of the borehole geophysical logs, bedrock structure statistics plots, tables of bedrock structures, and the borehole geophysical logging figures. The tables of bedrock structures and the linear logging data are also provided attached to this email in Microsoft Excel format as requested.

- 114-MW52D
- 114-MW57D
- 114-MW61D
- 114-MW66D

As you know, we also conducted borehole geophysical logging at this site in boreholes 114-MW4D and 114-MW6D on September 22, 2020. We refer to and include the bedrock structure results from these two boreholes in the bedrock structure portion of this report.

The borehole geophysical logging program consisted of the following in the logged boreholes:

- Optical Televiewer (OTV)
- Acoustic Televiewer (ATV)
- Acoustic Caliper
- Natural Gamma Ray
- Spontaneous Potential (SP)
- Single Point Resistance (SPR)
- Fluid Temperature
- Fluid Conductivity
- Heat Pulse Flow Meter (HPFM) Under Stressed Conditions*

*The boreholes were developed the day before the borehole geophysical logging was conducted in each borehole. The pumping associated with the development of the boreholes caused the water level to drop in all of the boreholes. At the time of logging the boreholes the day after development, water was still rising (recovering) in the boreholes. Because water was still rising each borehole at the time of logging, the boreholes were under stressed conditions during the

HPFM logging. When water in a borehole is rising/recovering during HPFM logging, the conditions mimic acquiring HPFM data under pumping conditions.

Based on the borehole televiewer images (OTV & ATV), the bedrock encountered in boreholes 114-MW6D, 114-MW52D, 114-MW57D, and 114-MW66D appears to be sedimentary bedrock, likely from the Lockatong Formation based on information provided by AECOM; and the bedrock encountered in boreholes 114-MW4D and 114-MW61D appears to be igneous bedrock, possibly diabase based on information provided by AECOM.

Explanation of the Borehole Geophysical Data Interpretation and Presentation

The datum for depths in this report is the top of the steel casing at the location of each borehole. The depths of bedrock structures are reported as the average depths of the top and bottom intersections of the bedrock structures and the borehole wall. The orientations of bedrock structures are reported as the dip azimuth (dip direction) and dip angle of each structure, as shown in the Televiewer Explanation Figure. The OTV, ATV, and bedrock structure dip azimuth data are referenced to true north using a magnetic declination of 12.8° west and the bedrock structure dip angle data are reported from horizontal. Please note that the bedrock structure dip azimuth data are perpendicular to strike as used commonly by geologists.

Bedrock structures detected in the televiewer (OTV & ATV) data are grouped into four categories (Fracture Rank 1, Fracture Rank 2, Fracture Rank 3, and Bedding) and are shown as color-coded lines and symbols on the structure projection plots and tadpole plots. The Key to Bedrock Structure Categories figure describes the bedrock structure categories and associated colors and tadpole shapes. The Tadpole Explanation Figure explains how to "read" the tadpole plots. Fracture Rank 1 consists of minor fractures that are not distinct and may not be continuous around the borehole. Fracture Rank 2 consists of intermediate fractures that are distinct and continuous around the borehole with little or no apparent aperture. Fracture Rank 3 consists of major fractures that are distinct and continuous around the borehole with apparent aperture. The Bedding category consists of planar geologic structures in the bedrock interpreted as bedding.

The data report consist of the following.

- Borehole Geophysical Logging Figures

  Figure 1. Key to bedrock structure categories
  Figure 2. Tadpole plot explanation figure
  Figure 3. Televiewer explanation figure

- Borehole Geophysical Logs – The borehole geophysical logs are provided at a scale of 1-inch to 2.5-feet, meant to be printed on portrait 11” x 17” paper, and consist of the following.

| Track # | Log & Description |
|---|---|
| 1. | OTV Image |
| 2. | Depth |
| 3. | ATV Amplitude |
| 4. | ATV Travel Time |
| | Structure Projection – bedrock structure interpretation plotted in projection view |
| 5. | Acoustic Caliper – borehole diameter in inches |
| | Tadpole Plot – bedrock structure interpretation plotted as tadpoles |
| 6. | Natural Gamma Ray, SP, & SPR |
| 7. | Depth |
| 8. | Fluid Temperature & Fluid Conductivity |
| 9. | HPFM Under Stressed Conditions |
| | Borehole Flow Interpretation |

- Bedrock Structure Statistics Plots for Sedimentary Bedrock – The statistics plots consist of all detected bedrock structures in each borehole individually and from all of the logged boreholes in sedimentary bedrock in 2020 and 2021 combined (114-MW6D, 114-MW52D, 114-MW57D, 114-MW66D), are meant to be printed on landscape 11" x 17" paper, and consist of the following.

| Track # | Description |
|---|---|
| 1. | Stereogram of Fractures – poles/contours of fractures plotted on an equal area lower hemisphere stereogram |
| 2. | Dip Azimuth Rose Diagram of Fractures |
| 3. | Dip Angle Histogram of Fractures |
| 4. | Stereogram of Bedding – poles/ contours of bedding plotted on an equal area lower hemisphere stereogram |
| 5. | Dip Azimuth Rose Diagram of Bedding |
| 6. | Dip Angle Histogram of Bedding |

- Bedrock Fracture Statistics Plots for Igneous Bedrock – The statistics plots consist of all detected bedrock structures in borehole 114-MW61D individually and from both of the logged boreholes in igneous bedrock in 2020 and 2021 combined (114-MW4D and 114-MW61D), are meant to be printed on landscape 11" x 17" paper, and consist of the following.

| Track # | Description |
|---|---|
| 1. | Stereogram of Fractures – poles of fractures plotted on an equal area lower hemisphere stereogram |
| 2. | Contoured Stereogram of Fractures – contours of poles of fractures plotted on an equal area lower hemisphere stereogram |
| 3. | Dip Azimuth Rose Diagram of Fractures |
| 4. | Dip Angle Histogram of Fractures |

- Tables of Bedrock Structures – The tables of bedrock structures consist of all detected bedrock structures (fractures & bedding) in each borehole individually, are meant to be printed on standard portrait 8.5" x 11" paper, and consists of the following:

| Column # | Description |
|---|---|
| 1. | Depth |
| 2. | Bedrock Structure Dip Azimuth |
| 3. | Bedrock Structure Dip Angle |
| 4. | Bedrock Structure Category |

Borehole Geophysical Logging Results

Summary of Borehole Flow

The boreholes were developed the day before the borehole geophysical logging was conducted in each borehole. The pumping associated with the development of the boreholes caused the water level to drop in all of the boreholes. At the time of logging the boreholes the day after development, water was still rising (recovering) in the boreholes. Because water was still rising each borehole at the time of logging, the boreholes were under stressed conditions during the HPFM logging. When water in a borehole is rising/recovering during HPFM logging, the conditions mimic acquiring HPFM data under pumping conditions.

Vertical flow was detected in each of the logged boreholes with the HPFM under the stressed conditions encountered in the boreholes at the time of logging. Below are tables summarizing the borehole flow conditions based on the borehole

geophysical logging data, specifically the approximate depths and rates where flow was detected with the HPFM into and up the boreholes from hydraulically transmissive fractures.

114-MW52D - Summary of Borehole Flow Under Stressed Conditions

| Depth (Feet) | Comments |
|---|---|
| 79.1 | Water Level - 79.1 Feet at 14:00 |
| 79.1 - 81.1 | flow up the borehole in the casing at 0.02 gpm under stressed conditions |
| 81.1 | Bottom of the 6-Inch Steel Casing |
| 81.1 - 89.3 | minor flow into & up the borehole under stressed conditions |
| 89.3 - 102.5 | no flow detected under stressed conditions |
| 102.5 - 104.2 | possible minor flow into the borehole based on the fluid temp & cond data |
| 104.2 - 106.9 | no flow detected under stressed conditions |
| 106.9 | Bottom of the Borehole (based on the geophysical logging) |

114-MW57D - Summary of Borehole Flow Under Stressed Conditions

| Depth (Feet) | Comments |
|---|---|
| 39.5 | Water Level - 39.5 Feet at 14:15 |
| 39.5 - 86.8 | flow up the borehole in the casing at 0.04 gpm under stressed conditions |
| 86.8 | Bottom of the 6-Inch Steel Casing |
| 86.8 - 89.9 | flow into & up the borehole under stressed conditions |
| 89.9 - 97.6 | no flow detected under pumping conditions |
| 97.6 - 100.4 | possible minor flow into the borehole based on the fluid temp & cond data |
| 100.4 - 113.4 | no flow detected under stressed conditions |
| 113.4 | Bottom of the Borehole (based on the geophysical logging) |

114-MW61D - Summary of Borehole Flow Under Stressed Conditions

| Depth (Feet) | Comments |
|---|---|
| 42.5 | Water Level - 42.5 Feet at 10:45 |
| 42.5 - 87.5 | flow up the borehole in the casing at 0.04 gpm under stressed conditions |
| 87.5 | Bottom of the 6-Inch Steel Casing |
| 87.5 - 93.7 | flow into & up the borehole under stressed conditions |
| 93.7 - 101.8 | no flow detected under pumping conditions |
| 101.8 - 105.0 | possible minor flow into the borehole based on the fluid temp & cond data |
| 105.0 - 109.0 | no flow detected under stressed conditions |
| 109.0 - 110.3 | possible minor flow into the borehole based on the fluid cond data |
| 110.3 | Bottom of the Borehole (based on the geophysical logging) |

114-MW66D - Summary of Borehole Flow Under Stressed Conditions

| Depth (Feet) | Comments |
|---|---|
| 51.3 | Water Level - 51.3 at 11:00 |
| 51.3 - 91.9 | flow up the borehole in the casing at 0.05 gpm under stressed conditions |
| 91.9 | Bottom of the 6-Inch Steel Casing |
| 91.9 - 93.3 | flow into & up the borehole under stressed conditions |
| 93.3 - 111.6 | flow up the borehole at 0.01 gpm under stressed conditions |
| 111.6 - 112.4 | minor flow into & up the borehole under stressed conditions |

| | |
|---|---|
| 112.4 - 114.6 | no flow detected under stressed conditions |
| 114.6 | Bottom of the Borehole (based on the geophysical logging) |

Summary of Bedrock Results

Based on the borehole televiewer images (OTV & ATV), the bedrock encountered in boreholes 114-MW6D, 114-MW52D, 114-MW57D, and 114-MW66D appears to be sedimentary bedrock, likely from the Lockatong Formation based on information provided by AECOM; and the bedrock encountered in boreholes 114-MW4D and 114-MW61D appears to be igneous bedrock, possibly diabase based on information provided by AECOM. The bedrock structure orientations and statistics are plotted and reported on the borehole geophysical logs, the bedrock structure statistics plots, and the bedrock structure tables.

Sedimentary Bedrock – Boreholes 114-MW6D, 114-MW52D, 114-MW57D, 114-MW66D. Based on the televiewer data, the sedimentary bedrock is relatively unfractured with the most prominent orientation of bedrock fractures being approximately parallel to the bedrock bedding evident in the bedrock. The bedrock in these boreholes also has much higher gamma radiation (~150-500 cps) as one would expect in the siltstones and mudstones found in the Lockatong formation. The most prominent orientation of bedding and bedrock fractures detected in the sedimentary bedrock has a dip azimuth to the northwest of 300° - 330° and a shallow dip angle of 0° - 20° from horizontal. A second, but significantly less prominent, bedrock fracture set was also detected in the sedimentary bedrock with a dip azimuth to the southeast of 105° - 135° and a steep dip angle of 65° - 85° from horizontal.

Igneous Bedrock – Boreholes 114-MW4D & 114-MW61D. Based on the televiewer data, the igneous bedrock is highly fractured with many moderately to steeply dipping bedrock fractures, has no evidence of bedding, and has low gamma radiation (~30 cps) compared to the sedimentary bedrock. The most prominent orientation of bedrock fractures detected in the igneous bedrock has a dip azimuth to the east-southeast of 90° - 120° and a moderate dip angle of 25° - 45° from horizontal.

The number of bedrock fractures and bedding detected and the most prominent orientations (dip azimuths and dip angles) of these bedrock fractures and bedding are reported in the tables below.

Summary of Bedrock Structure Statistics in the Sedimentary Bedrock
for Boreholes 114-MW6D, 114-MW52D, 114-MW57D, 114-MW66D

| Borehole ID & Date Logged | Structure Type | Number of Structures | Most Prominent Bedrock Structure Dip Azimuths | Most Prominent Bedrock Structure Dip Angles |
|---|---|---|---|---|
| 114-MW6D (September 22, 2020 | Fractures | 38 | primary: northwest (300° - 330°) secondary: southeast (120° - 135°) | primary: 0° - 20° from horizontal secondary: 70° - 85° from horizontal |
| | Bedding | 33 | northwest (285° - 315°) | 10° - 15° from horizontal |
| 114-MW52D (January 14, 2021) | Fractures | 30 | northwest (300° - 315°) | 0° - 15° from horizontal |
| | Bedding | 45 | northwest (285° - 315°) | 10° - 15° from horizontal |
| 114-MW57D (January 15, 2021) | Fractures | 25 | northwest (315° - 345°) | 10° - 15° from horizontal |
| | Bedding | 44 | northwest (285° - 300°) | 10° - 20° from horizontal |
| 114-MW66D (January 14, 2021) | Fractures | 40 | primary: northwest (300° - 315°) secondary: southeast (105° - 120°) | primary: 10° - 20° from horizontal secondary: 65° - 85° from horizontal |
| | Bedding | 54 | northwest (285° - 300°) | 15° - 20° from horizontal |
| All Boreholes in Sedimentary Bedrock | Fractures | 133 | primary: northwest (300° - 330°) secondary: southeast (105° - 135°) | primary: 0° - 20° from horizontal secondary: 65° - 85° from horizontal |
| | Bedding | 176 | northwest (285° - 300°) | 10° - 20° from horizontal |

Summary of Bedrock Structure Statistics in the Igneous Bedrock
for Boreholes 114-MW4D & 114-MW61D

| Borehole ID & Date Logged | Structure Type | Number of Structures | Most Prominent Bedrock Fracture Dip Azimuths | Most Prominent Bedrock Fracture Dip Angles |
|---|---|---|---|---|
| 114-MW4D (September 22, 2020) | Fractures | 95 | east-southeast (90° - 105°) | 25° - 45° from horizontal |
| 114-MW61D (January 15, 2021) | Fractures | 149 | east-southeast (90° - 120°) | 35° - 45° from horizontal |
| All Boreholes in Igneous Bedrock | Fractures | 244 | east-southeast (90° - 120°) | 25° - 45° from horizontal |

# Implications of Soil Heterogeneities on Fate and Transport

# APPENDIX E – Implication of Soil Heterogeneities on Fate and Transport

## I. Relationship Between Soil Heterogeneities and Fate and Transport

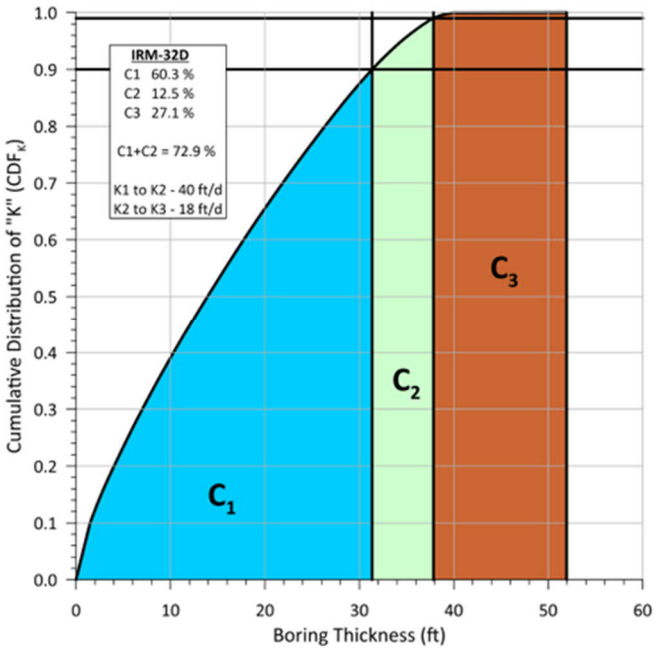
## II. Matrix Diffusion Modeling – $Cr^{+6}$ Distribution and Future Transport

## I. Relationship Between Soil Heterogeneities and Fate and Transport

During implementation of the Phase II and Phase III IRM remediation and monitoring well networks, approximately 2,824 vertical feet of HPT boring was conducted at 54 different locations. Vertical depths ranged from approximately 22.08 feet (ft) below ground surface (bgs) to 85.05 feet bgs (-9.4 ft NAVD88 to -73.95 ft NAVD88). These borings were performed to obtain high-resolution hydraulic conductivity data within the Phase II and III IRM areas. This high-resolution IRM characterization information improved the understanding of site stratigraphic resolution and heterogeneities in the intermediate and deep water-bearing zones. The hydraulic conductivity response measured via HPT is obtained via minor injections of water from the tooling along the vertical extent of the boring, with concurrent measurements of downhole pressure change. This methodology has sufficient resolution to reliably identify hydraulic conductivity differences throughout the vertical extent of each boring. Outputs from the Phase II and III IRM HPT borings are included on **Figures E1** through **E33** and **Figures E34** through **E54**, respectively.

The data from individual high-resolution HPT borings are useful in understanding changes in relative permeability and apparent differences in boring-specific groundwater and Cr flux. A review of these individual borings also provides a clear indication that the migration of groundwater and Cr at Site 114 is not uniform. To support this analysis, the direct hydraulic conductivity data obtained from each HPT profile were sorted using a cumulative distribution function ($CDF_K$) plot to group individual aquifer fractions for relative permeability evaluation (see inset example at right) (Horst et al. 2017[1]). The $CDF_K$ figures are an effective method to sort and understand the relative fraction of hydraulic conductivity distribution on the y-axis (0.0 to 1.0) with the corresponding boring thickness along the x-axis. This improves visualization of the order of magnitude differences in hydraulic conductivity data to identify the fraction of the groundwater flow (approximated from the hydraulic conductivity) that occurs across the boring thickness. Based on the relative hydraulic conductivities observed across each HPT profile, the order of magnitude differences in relative permeability are illustrated by sorting them from most permeable to least permeable into three compartments: C1, C2, and C3. Given the order of magnitude changes between each compartment, these compartments identify the overall fraction of the soil profile through which 90%, 9%, and 1%, respectively, of the groundwater flux moves through Site 114 soils. In the inset figure at right for boring 114-P2-IRM-32D, the C1 compartment representing 90% of the flux ($CDF_K$ between 0.0 – 0.9) is encountered across

**Cumulative distribution function plot for 114-P2-IRM-32D**



[1] Horst, J., S. Potter, M. Schnobrich, N. Welty, A. Gupta, and J. Quinan. 2017. *Advancing Contaminant Mass Flux Analysis to Focus Remediation: The Three-Compartment Model. Groundwater Monitoring & Remediation 37, no. 4, Fall.*

approximately 31 feet of the boring, the C2 compartment representing 9% of the flux ($CDF_K$ between 0.90 – 0.99) is encountered across 7 feet of the boring, and the C3 compartment representing 1% of the flow ($CDF_K$ between 0.99 – 1.0) is encountered across 14 feet of the boring.

C1 and C3 are separated by two orders of magnitude difference in relative permeability, which defines the difference between advection (C1) and diffusion (C3) transport processes (ESTCP 2012[2]). C2 resides between these two zones and is dominated by slow advection processes. Both advection-dominated zones (C1 and C2) can be considered permeable, whereas the diffusion-dominated zone (C3) can be considered to have little to no permeability. The net result for the inset example on the previous page is that 38 feet of the boring (73%) consists of permeable soils and 14 feet of the boring (27%) consists of soils with little to no permeability.

A summary of the $CDF_K$ plot output metrics for each of the Phase II and III IRM borings are presented in **Tables E1** and **E2**. When the individual borings are sorted via the above methods, the total 1,560 feet of Phase II IRM HPT borings indicate that approximately 852 feet (55%) are identified as C1 soils, 306 feet (20%) are identified as C2 soils, and 401 feet (25%) are identified as C3 soils (**Table E1**). Similarly, the total 1,264 feet of Phase III IRM HPT borings indicate that approximately 693 feet (55%) are identified as C1 soils, 203 feet (16%) are identified as C2 soils, and 368 feet (29%) are identified as C3 soils (**Table E2**). The compiled totals for each zone in the Phase II and Phase III IRM borings are considered equivalent considering the heterogeneities of the GAG site soils. Combining all 2,824 feet of HPT boring information from both Phase II and III IRM areas, approximately 73% of the intermediate and deep water-bearing zones soils are considered permeable and 27% of these soils are characterized by little to no permeability.

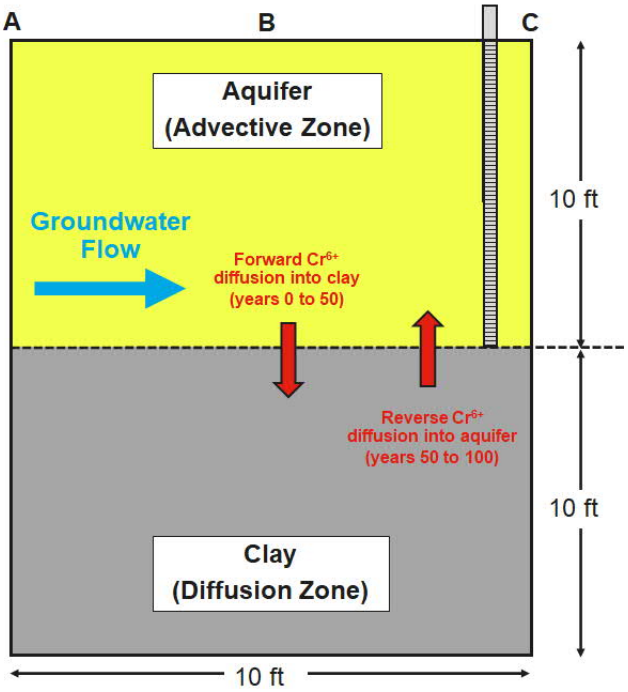
## II. Matrix Diffusion Modeling – $Cr^{+6}$ Distribution and Future Transport

To understand the effects of diffusive $Cr^{+6}$ mass discharge from the low permeability strata of the intermediate and deep water-bearing zones, two different matrix diffusion modeling methods were used to simulate both the loading and release phases between higher permeability and adjacent low permeability soils. These include a Numerical Diffusion Model developed by Arcadis as well as the Matrix Diffusion Toolkit (ESTCP 2012[3]). These models were designed to evaluate matrix diffusion relationships between soils of varied relative permeability. Both models leverage a loading phase wherein a groundwater analyte migrates via diffusion from a higher permeability advection zone into a lower permeability diffusion zone. The loading phase is then followed by a subsequent diffusion phase to assess: 1) mass discharge from the low permeability to the high permeability zone (i.e., back or reverse diffusion); and 2) continued diffusion deeper into the low permeability zone (i.e., forward diffusion).

Both models were set up using a range of parameters applicable to understanding diffusion at and near Site 114. The advective zone was assumed to be 10 feet (ft) thick with an average groundwater flow velocity of 0.01 ft/day. Groundwater velocity was determined within the sheet pile area using a hydraulic conductivity value of 5 ft per day, a gradient of 0.00025 ft per ft, and a mobile porosity of 12.5%. This slow flow rate is considered representative of flow within the sheet pile, but groundwater velocity does not have a significant bearing on the diffusion model outputs. The underlying mass storage zone was represented by a 10 ft thick clay unit with a total porosity (n) of 40% and no advective flow (Text Figure 1). While many of the clay sequences identified in the intermediate and deep water-bearing-zones are thinner than 10 ft, this thickness was selected to understand the extent of $Cr^{+6}$ diffusion over the modeled durations knowing that the outputs can therefore be applied to any other clay sequence of comparable or thinner thickness. An effective diffusivity ($D_e$) term of 5.60E-6 $cm^2$/sec was assigned for $Cr^{+6}$ based on the diffusivity (D) term of chloride in water value of 1.89E-5 $cm^2$/sec (Cussler, 1984[4]) using the equation $D_e = D^*n^{1.33}$.



**Text Figure 1 – Conceptual numerical model domain**

To simulate the forward diffusion of $Cr^{+6}$ from the advective zone to the mass storage zone, a fixed concentration of 100 milligrams per liter (mg/L) $Cr^{+6}$ was simulated in the advective zone for a period of 50 years. The 100 mg/L $Cr^{+6}$ concentration was selected as it applies to most of the impacted groundwater area at Site 114. Investigation data have demonstrated that $Cr^{+6}$ concentrations are higher

[3] ESTCP, 2012. Farhat, S.K., C.J. Newell, T.C. Sale, D.S. Dandy, J.J. Wahlberg, M.A. Seyedabbasi, J.M. McDade, and N.T. Mahler, 2012. Matrix Diffusion Toolkit, developed for the Environmental Security Technology Certification Program (ESTCP) by GSI Environmental Inc., Houston, Texas.

[4] Cussler, E.L. 1984. Diffusion: Mass transfer in fluid systems. Cambridge University Press.

than this in select areas of the site and have also demonstrated that $Cr^{+6}$ attenuates in concentration with increased depth in other areas. Ultimately, the resulting outputs of the matrix diffusion modeling programs are proportional to the starting concentration, so can be easily modified based on the assumed starting concentration relative to that applied for the model. As an example, if 200 mg/L was used as the loading concentration, the model outputs would be two-fold higher than the concentration obtained using a 100 mg/L loading value. Given the spatial and vertical variability of $Cr^{+6}$ at the site, the 100 mg/L number therefore serves as a representative midpoint of what is found at Site 114 and is easily scalable to guide interpretations. While chromite ore processing predates the assumed timeframe of the 50-year loading period, it is challenging to pinpoint exactly when dissolved $Cr^{+6}$ migrated through the shallow zone, the meadow mat, and then the more permeable soils of the intermediate and deep water-bearing-zones where it began diffusing into lower permeability soils. Based on plume dynamics, it is expected that $Cr^{+6}$ transport would have started at lower concentrations and then built in $Cr^{+6}$ concentration over time. Given that the 50-year modeling duration assumes a stable $Cr^{+6}$ concentration (100 mg/L) and that diffusion is concentration dependent, the 50-year duration was chosen to account for the dynamics of early $Cr^{+6}$ plume invasion and to allow a long enough timeframe to understand matrix diffusion effects. Considering that the outputs of both models demonstrate that 50 years is sufficient longevity for $Cr^{+6}$ diffusion through the 10-ft clay zone, variability around the 50-year timeframe does not substantively affect the analysis.

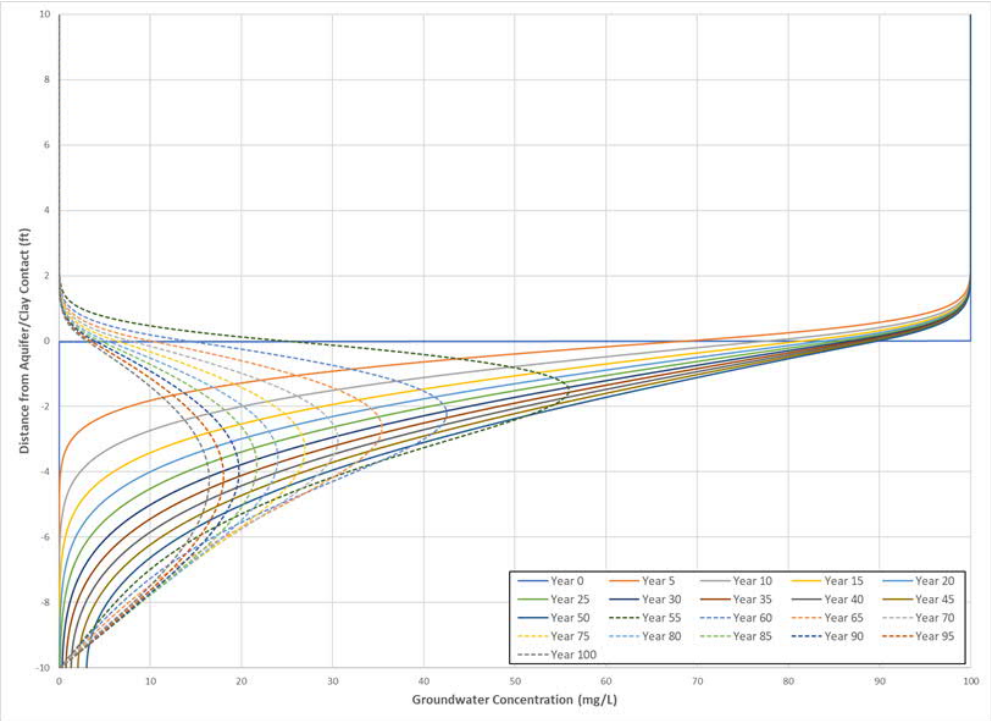
The final modeling step included a step governed by diffusion only. After the loading period of 50 years, the advective zone $Cr^{+6}$ source concentration in both models was set to 0 mg/L to allow projection of the future mass discharge of $Cr^{+6}$ from the low permeability soils back into the advective zone. This reverse modeling portion was run for an additional 50 years. The outputs of both models employed are outlined in the sections below.

## Numerical Modeling Approach

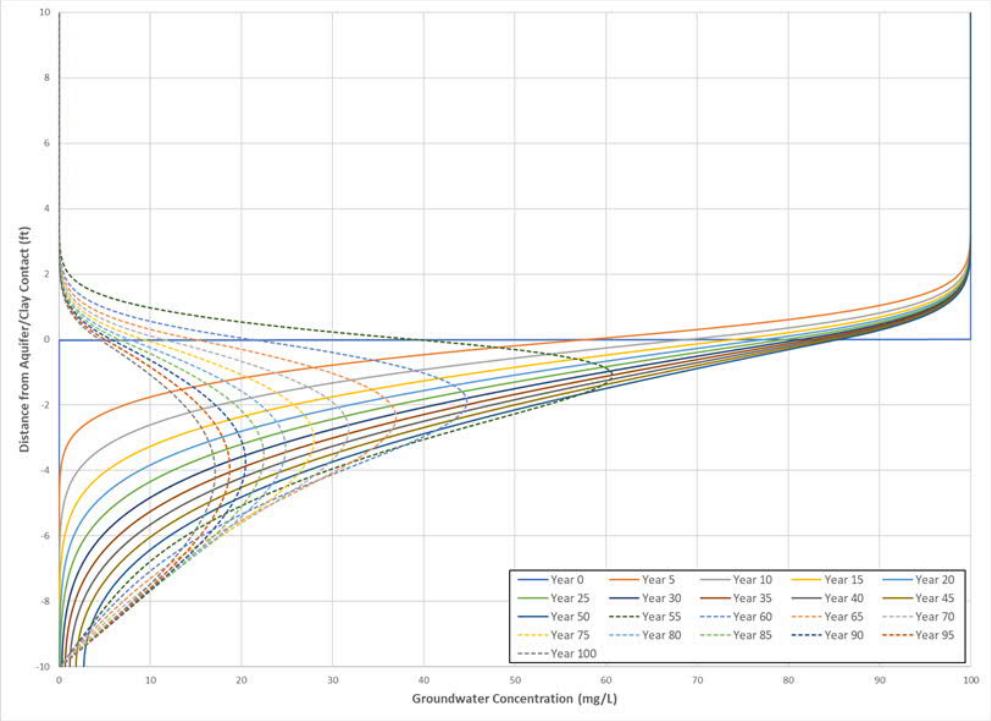
For the numerical modeling simulation, the model domain established as outlined on the previous page and used to simulate 100 years of diffusion split between both the forward and reverse diffusion stages. The model was constructed in accordance with Text Figure 1 and with the model parameters stated on the previous page to allow evaluation of differences in diffusion profiles along a plume flow path (locations B and C) downgradient of the initial source (location A).

The results profiles for locations B and C are plotted on the following page. Solid lines represent incremental 5-year intervals during the forward diffusion phase and dashed lines represent the projections once the $Cr^{+6}$ concentration in the permeable zone is reduced to 0 mg/L after year 50.

The profiles on Text Figures 2 and 3 show that during the 50-year loading period, $Cr^{+6}$ concentrations are expected to gradually diffuse into at least 10 feet of lower permeability soils where they decline in concentration with depth. Following reduction of the $Cr^{+6}$ concentration to 0 mg/L after year 50, the reverse diffusion period begins and lower concentrations of $Cr^{+6}$ are predicted within the advective zone just above the interface. The highest mass discharge from the low permeability zone into the advective zone occurs immediately following source removal (years 51 through 55), following which mass discharge release from the low permeability soils declines. This decrease in mass discharge occurs due to the reduced concentrations of $Cr^{+6}$ at the diffusion zone interface associated with the loss of $Cr^{+6}$ from the low to high permeability zones and the further diffusion of $Cr^{+6}$ deeper into the low permeability zone. This pattern progresses with time, with sequential declines in mass discharge from low to high permeability zones and the gradual downward migration of the center of $Cr^{+6}$ mass into the low permeability zone where it stabilizes. While modeled for a 10-foot sequence of low permeability zone soils, this same relative pattern would be expected in zones that are both narrower or thicker in vertical thickness.

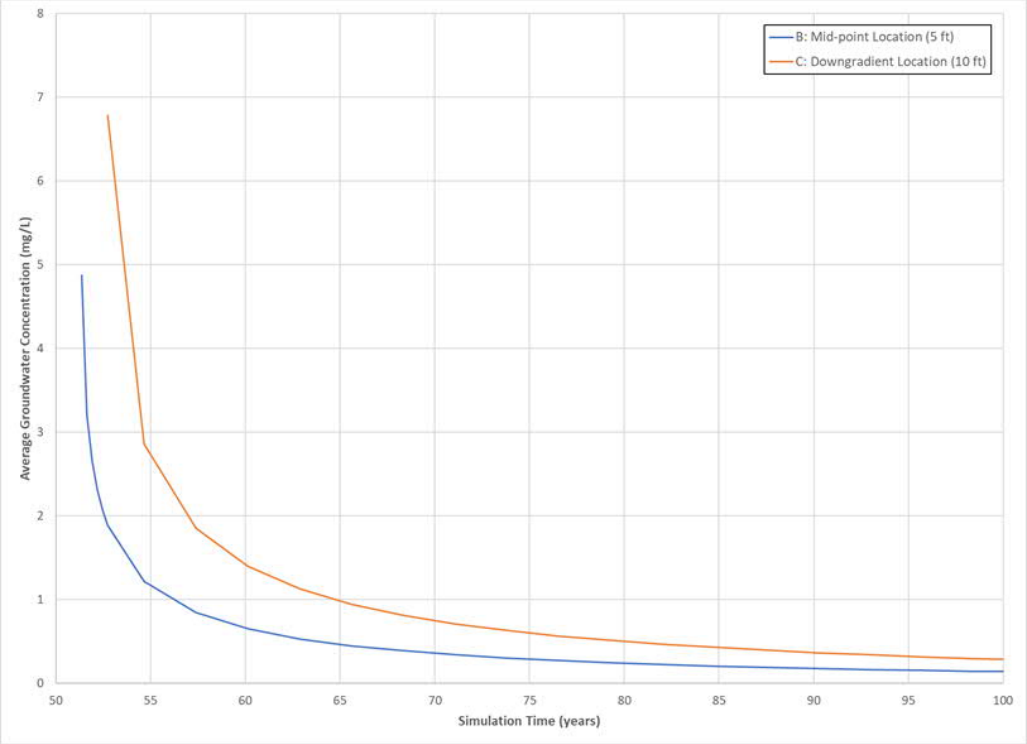


**Text Figure 2 – Forward and reverse diffusion projections for 100-year model duration 5 ft downgradient from source (B).**



**Text Figure 3 – Forward and reverse diffusion projections for 100-year model duration 10 ft downgradient from source (C).**

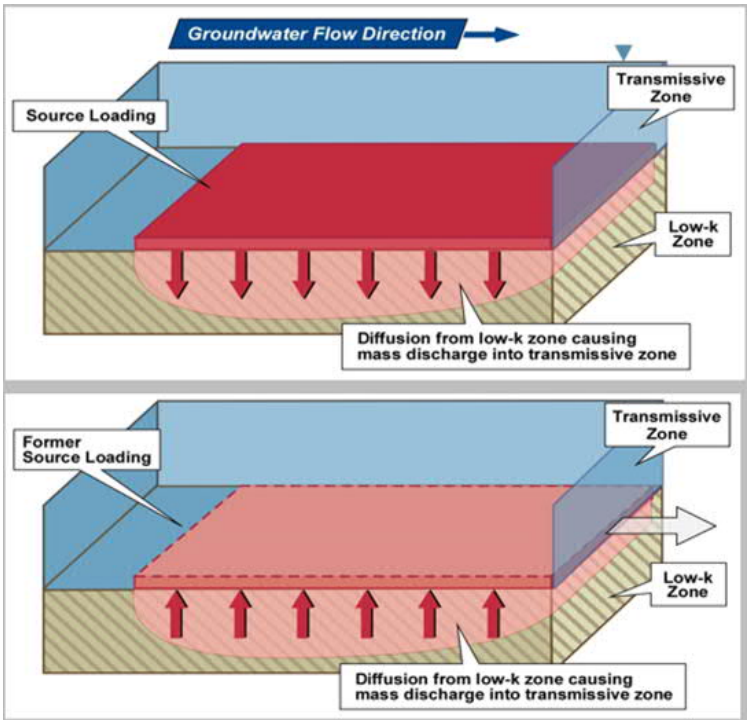
The mass discharge profiles modeled on the previous page can be leveraged to calculate the expected $Cr^{+6}$ concentration in advection zone groundwater for each of the 5-year time periods between year 50 and 100. The graph presented on Text Figure 4 includes the predicted concentration in a theoretical monitoring well installed at both locations B and C and screened across 10 ft of the advection zone.



**Text Figure 4 – Predicted $Cr^{+6}$ concentrations at two theoretical monitoring wells installed at locations 5 ft (B) and 10 ft (C) within the model domain.**

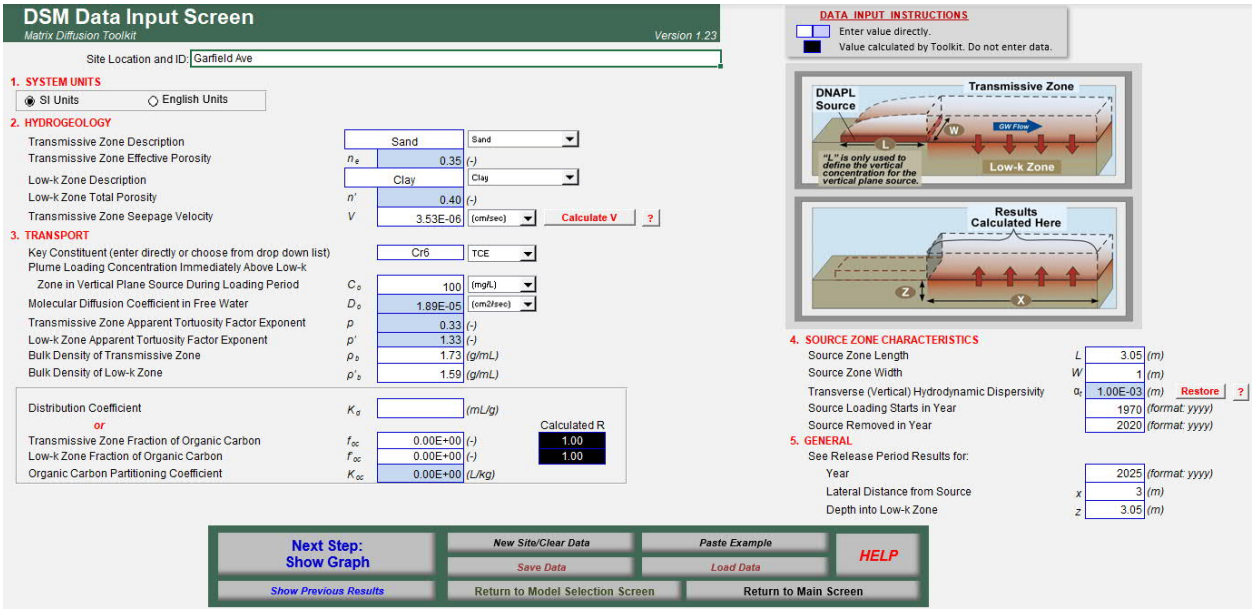
## Matrix Diffusion Toolkit Application

The second model used to assess both forward and reverse $Cr^{+6}$ diffusion was the Matrix Diffusion Toolkit, which is an industry-accepted and publicly available method served to validate the simulations of the first modeling approach. The estimates were developed using the square root model input parameters, the same model domain size specifications, and the same source $Cr^{+6}$ concentration as outlined in the preceding section. The modeling process adhered to the guidance provided and used the Dandy-Sale Model (DSM) approach. The conceptual modeling approach related to both source loading and diffusion phases is outlined on Text Figure 5 at right.



**Text Figure 5 - Dandy-Sale Model Domain**

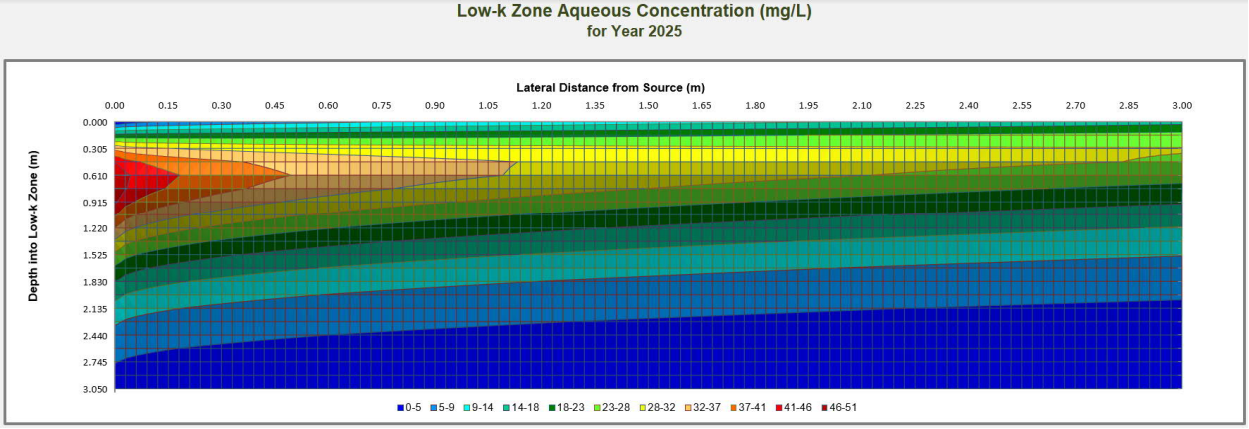
A summary of the model data input parameters used as a basis for diffusion simulation are included in Text Figure 6. These utilized the same value for molecular diffusion, assumed no sorption, and assumed a source concentration of 100 mg/L.



**Text Figure 6 - Matrix Diffusion Toolkit assumptions and input parameters**

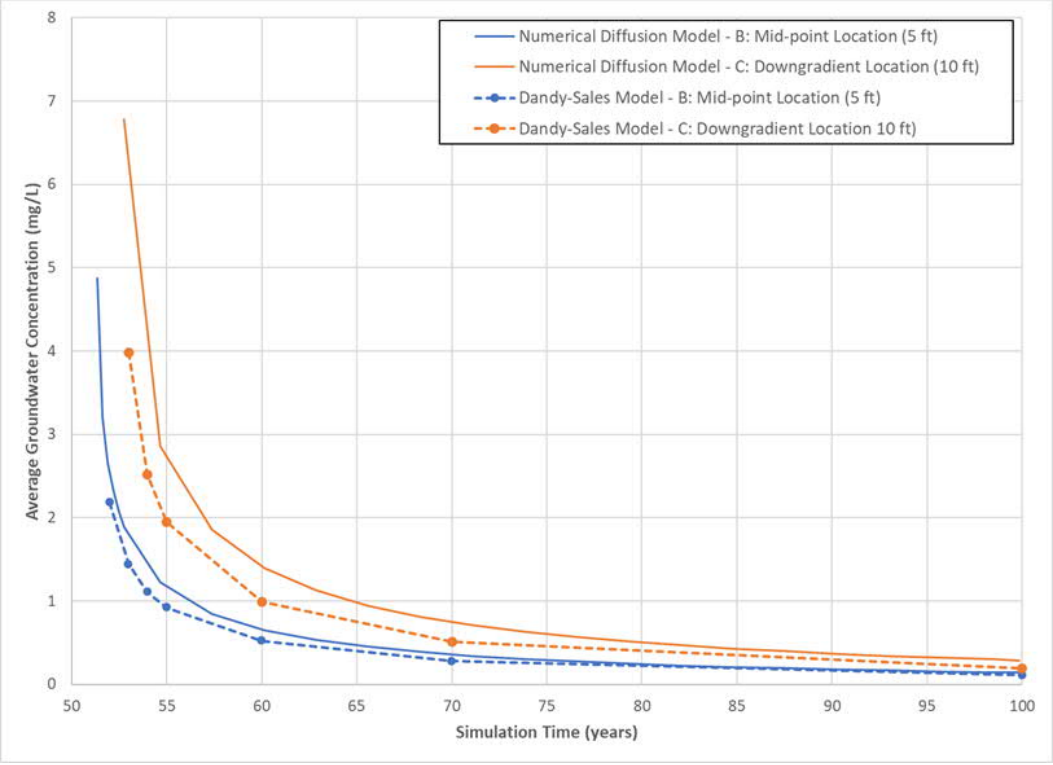
Similar to the outputs of the first numerical model, the DSM methodology allows estimation of the potential diffusion depths of $Cr^{+6}$ during the initial 50-year loading period and then allows time-based estimates of the advective zone concentrations following source removal. Using the input entries from the

DSM interface on the preceding page, the plots for $Cr^{+6}$ diffusion into the low permeability zone and an example profile for $Cr^{+6}$ concentrations within the advective zone are included on Text Figure 7.



**Text Figure 7 - Projected $Cr^{+6}$ concentrations in low permeability soils during year 55, 5 years following source elimination.**

The Matrix Diffusion Toolkit approach does not allow outputs of multiple time series data over a prolonged timeframe similar to Text Figure 4; therefore, the data from the individual time periods (e.g., years 55, 60, 65, etc) were compiled from the 50- to 100-year durations to develop profiles for comparison both modeling approaches. Text Figure 8 is therefore provided the compare the predicted $Cr^{+6}$ concentrations within the advection zone in a theoretical 10-ft monitoring well for both modeling approaches.



**Text Figure 8 - Predicted $Cr^{+6}$ concentrations at theoretical monitoring wells within modeled domains.**

## Diffusion Model Summary

Separate modeling runs were conducted in two different modeling packages to assess consistency of the results. The concentrations of $Cr^{+6}$ predicted in monitoring wells installed at the diffusion interface from both models are in good general agreement. Both models predicted that the highest $Cr^{+6}$ rate of diffusion-based $Cr^{+6}$ discharge occurs within the first 5 to 10 years after removing the $Cr^{+6}$ model source (55 to 60 years from beginning of loading), following which they gradually decline to less than 1 mg/L by year 15 (65 years from beginning of loading) (Text Figure 8).

The diffusion modeling provides information useful to understanding the relative distribution of $Cr^{+6}$ within lower permeability soils and its expected behavior following source removal in the more permeable zone soils. These are conceptualized in Section I as the C1 and C2 compartments which are dominated by advection, and the C3 compartment which is dominated by diffusion. In conjunction with the HPT $CDF_K$ analysis from Site 114, these collective findings have the following implications for the Conceptual Site Model and remedy development:

- Low permeability materials account for approximately 27% of the intermediate and deep water-bearing zones and are expected to contain $Cr^{+6}$ concentrations that are within one order of magnitude less than the concentrations measured in the adjacent higher permeability zones (prior to any treatment). The $Cr^{+6}$ concentrations within these low permeability soils decline with increased vertical thickness, and diffusion gradients limit migration deeper into the soil column.

- The models predicted that dissolved $Cr^{+6}$ is expected to reside in the low permeability soils for an extended period (at least an additional 50 years), but also demonstrate that the slow rate of diffusion serves to immobilize $Cr^{+6}$ within these soils, limits future migration of $Cr^{+6}$, and stabilizes $Cr^{+6}$ within the aquifer.

- The expected release of $Cr^{+6}$ from the low permeability zone will be highest within the first several years following $Cr^{+6}$ treatment, following which mass discharge from low to high permeability zones will decline significantly within 5 to 10 years.

**Notes:**

Boring logs were not generated for wells that were "shared" between this groundwater RI and the Phase I groundwater IRM on Site 114. These include: 114-P1-IRM-5I, 114-P1-IRM-27D, 114-P1-IRM-40D, and 114-P1-MW2I. These monitoring wells were installed by another consultant (ARCADIS).

[1] - 114-MW24AR is a replacement for original RI program well 114-MW24A, and was installed in the same location as the original. The boring log for original well 114-MW24A is provided.

[2] - 114-MW40B was installed in the same location as boring 114-SS-40B. Refer to the boring log for 114-SS-40B for borehole lithology.

[3] - 114-MW42A was installed in the same location as soil PDI boring GAR-PDI-B`2A. Refer to the boring log for GAR-PDI-B`2A for borehole lithology.

[4] - 114-SS-43A and 114-MW43A were installed in the same location as soil PDI boring GAR-PDI-A11B. Refer to the boring log for GAR-PDI-A11B for borehole lithology.

[5] - 132-P3A-MW104D-1 and 132-P3A-MW104D-2 were installed within the same boring. Borehole lithology for both of these locations is provided on the boring log for 132-P3A-MW104D-2.

IRM - interim remedial measure

PDI - pre-design investigation

RI - Remedial Investigation

| 2 | | | wet | FILL | | fine to coarse SAND, little fill debris, (5YR 4/3) reddish brown, medium dense, wet no odor green staining, water at 4.5 feet | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | moist | FILL | | GGM (90%), little fill debris, (10GY 5/1) greenish gray, soft, wet no odor no staining | |
| 6 | | | | | | | |
| 7 | | | | | | | |
| 8 | | | | | | | |
| 9 | | | | | | | |
| 10 | 6 | 0.0 | wet | FILL | | CINDERS and ASH, little fill debris, (5YR 2.5/1) black, medium dense, wet moderate MGP-like odor, free product globules and sheen | |
| 11 | | | | | | | |
| 12 | | | | | | | |
| 13 | | | | | | | |
| 14 | | | | | | | |
| 15 | | | wet | FILL | | SILT, some fine sand, little fill debris, (7.5YR 4/2) brown, firm, wet slight organic odor no staining | |
| 16 | | | | | | | |

**Notes:**
bgs - below surface grade
MM - meadow mat
COPR - chromite ore processing residue
GGM - green grey mud
UNDno - non-organic undisturbed native deposits
UNDorg - organic undisturbed native deposits
MGP - manufactured gas plant
CCPW - chromate chemical production waste

| Depth Range (ft bgs) | Recovery (ft/ft) | PID (ppm) | Moisture Content | USCS | Graphic Log | Material Description | Well Construction | Remarks |
|---|---|---|---|---|---|---|---|---|
| 101 | 4.5 / 5 | 0 | DAMP | SM | | Pinkish gray (7.5YR 6/1) silty SAND, fine sand, few silt, few fine to coarse gravel, very dense, damp (Basal Till). | | |
| | | | DAMP | SM/SC | | Gray silty/clayey SAND, fine sand, subangular fine to coarse gravel, very dense, damp (Basal Till). | | |
| 102 | | | DRY TO DAMP | GW | | Gray powder (pulverized rock) with some subangular and subrounded fine to coarse gravel, loose, dry to damp (Basal Till). | | |
| 103 | | | DRY TO DAMP | GM | | Angular gray rock pieces with some fine sandy SILT, loose, dry to damp (Basal Till). | | |
| 104 | | | DRY TO DAMP | ML | | Gray sandy SILT, fine sand with little embedded subangular fine to coarse gravel, very dense, dry to damp (Basal Till). | | |
| 105 | 4 / 5 | 0 | DAMP | GP-GM | | Gray sandy SILT, interbedded with large gravel, very dense, damp. Solid core sections of till (sizes of up to 2 inch, 3 inch and 6 inch in length) (Basal Till). | | |
| 106 | | | DAMP | GW | | Gray powder (pulverized rock) with fine to coarse GRAVEL (up to 3 inches in diameter), loose, damp (Basal Till). | | |
| 107 | | | DAMP | ML/SM | | Very dark grayish brown (10YR 4/3) sandy SILT with subrounded to subangular fine to coarse gravel, very dense, damp (Basal Till). | | |
| 108 | | | | | | | | |
| 109 | | | | | | | | |
| 110 | 4 / 5 | 0 | WET | GW | | Black fine to coarse GRAVEL, little silt, loose, wet (Basal Till). | | |
| 111 | | | WET | CL | | Gray sandy CLAY with little fine to coarse gravel, loose, wet (Basal Till). | | |
| 112 | | | DAMP | CL | | Gray sandy CLAY with few subrounded coarse gravel, very hard, dense, damp (Basal Till). | | |
| 113 | | | | | | | | |
| 114 | | | DAMP | GP | | Gray subrounded coarse GRAVEL, one large gravel piece (1.5 inch in diameter), little silt, loose, damp (Basal Till). | | |
| 115 | 6 / 10 | 0 | WET | SP | | Gray coarse SAND, fine to coarse gravel, little silt or clay, loose, wet (Basal Till). | | |
| 116 | | | WET | SM | | Fine SAND with some silt, few medium to coarse rock pieces, loose, soft, wet (Basal Till). | | 116 ft: 35% fines (silt/clay) |
| 117 | | | WET | SM | | Reddish gray (5YR 5/2) SAND with silt, dense, wet (Basal Till). | | Bentonite seal: 117-119 ft bgs |
| 118 | | | WET | ML | | Reddish brown (5YR 5/3) sandy SILT, trace coarse sand, trace gravel, medium stiff, wet (Basal Till). | | 118 ft: 75% fines (silt/clay) |
| 119 | | | DAMP | CL | | Gray sandy CLAY, some fine to coarse rock pieces, very dense, damp (Basal Till). | | #0 Filter sand: 119-122 ft bgs |
| | | | NA | BEDROCK | | Gray bedrock (Stockton Formation), weathered with | | |

**Notes:** bgs = below surface grade; DGA = dense graded aggregate; NAD83 = North American Horizontal Datum of 1983; NAVD88 = North American Vertical Datum of 1988; NJSP = New Jersey State Plane; PID = photoionization detector; ppm = parts per million; USCS = Unified Soil Classification System; ft = feet; in = inches

**Comments:** Percentage of fines (silt/clay) shown are an estimated value based on a field-testing method.

# Evaluation of Permeable Zones Within the Basal Till
# Groundwater Remedial Investigation Report
# Garfield Avenue Group of Sites
# PPG, Jersey City, New Jersey

AECOM

| Well ID | Top (ft bgs) | Bottom (ft bgs) | USCS Code | Description | Total Basal Till Thickness (ft) | Interval Thickness (ft) | Permeable Zone Within Basal Till? |
|---|---|---|---|---|---|---|---|
| 114-MW45C | 65.0 | 70.0 | SW-GW | Brown, fine to coarse SAND and fine to coarse gravel, medium dense to dense, well graded (Basal Till), damp. | 6.0 | 5.0 | No |
| 114-MW45C | 70.0 | 71.0 | SW | Gray, tighly compressed, very dense SAND and angular gravel, some subangular pieces (Basal Till), damp. | | 1.0 | No |
| 114-MW48C | 48.0 | 50.0 | SW-SC | Reddish brown (5YR 5/3) clayey SAND, fine to coarse sand, little angular fine to coarse gravelclay, dense, compacted, damp (Basal Till). | 10.0 | 2.0 | No |
| 114-MW48C | 50.0 | 58.0 | SW-SC | Reddish brown (5YR 5/3) clayey SAND, fine to coarse sand, little subrounded to subangular fine to coarse gravel, clay, damp (becomes dry to damp at 57.5' to 58') (Basal Till). Boulder at 52 ft bgs. | | 8.0 | No |
| 114-MW49C | 49.5 | 60.0 | SW-SC | Reddish brown (2.5YR 4/3) clayey SAND, fine to coarse sand, little subangular fine to coarse gravel (up to 2.5 inch across), very hard, dense and compacted, damp (Basal Till). | 20.5 | 10.5 | No |
| 114-MW49C | 60.0 | 65.0 | SC | Dark reddish gray (5YR 4/2) poorly graded SAND with clay, fine to coarse angular sand with little fine to coarse gravel, varies from loose to hard, wet to moist (Basal Till). | | 5.0 | No |
| 114-MW49C | 65.0 | 65.2 | SP | Interbedded SAND, poorly graded sand, fine to medium sand (Basal Till). | | 0.2 | Yes |
| 114-MW49C | 65.2 | 70.0 | SC | Dark reddish gray (5YR 4/2) poorly graded SAND with clay, fine to coarse angular sand with little fine to coarse gravel, varies from loose to hard, wet to moist (Basal Till). | | 4.8 | No |
| 114-MW50C | 49.0 | 50.0 | SC-SM | Light brown (7.5YR 6/4) clayey SAND or silty SAND, fine to coarse SAND, SILT, few to little sub-angular to sub-rounded fine to coarse GRAVEL, coarse GRAVEL (up to 2" across), moist, firm (Basal Till). | 13.0 | 1.0 | No |
| 114-MW50C | 50.0 | 60.0 | SC-SM | Dark reddish brown (2.5YR 3/3) clayey SAND or silty SAND, few to little sub-angular to sub-rounded fine to coarse GRAVEL, hard, moist (50' to 52.5') to dry (52.5' to 60') (Basal Till). | | 10.0 | No |
| 114-MW50C | 60.0 | 62.0 | SC | Light brown (7.5YR 6/3) sandy CLAY, little sub-angular fine to coarse GRAVEL, very firm, moist (Basal Till). | | 2.0 | No |
| 114-MW51C | 66.5 | 69.5 | CL | Dark reddish gray (2.5YR 4/1) sandy CLAY, angular, fine to coarse SAND, little fine to coarse GRAVEL, hard, very dense, dry (Basal Till). | 10.5 | 3.0 | No |
| 114-MW51C | 69.5 | 70.0 | CL | Dark reddish gray (2.5YR 4/1) sandy CLAY, angular, fine to coarse SAND, little fine to coarse GRAVEL, hard, very dense, dry (Basal Till). | | 0.5 | No |
| 114-MW51C | 70.0 | 76.5 | CL | Dark reddish gray (2.5YR 4/1) sandy CLAY, angular, fine to coarse SAND, little fine to coarse GRAVEL, hard, very dense, dry (Basal Till). | | 6.5 | No |
| 114-MW51C | 76.5 | 77.0 | CL | Dark reddish gray (2.5YR 4/1) sandy CLAY, angular, fine to coarse SAND, little fine to coarse GRAVEL, hard, very dense, dry (Basal Till). | | 0.5 | No |

**(For Department use only)**

## SECTION A. SITE

Forrest Street and Forrest Street Properties, Al Smith Moving & Storage, Fishbein, Roadways

Site Name: Hudson County Chromate Sites 114, 132, 133, 135, 137, 143, 186, 199, Ten West Apparel, Halsted Co.,

Program Interest (PI) Number(s): G000005480, G000008749, 25695, 246332, 629345, G000008753, G000008759,

Communication Center Number(s) and/or ISRA number(s) for this submission: (as *many as will fit in the space provided)*

N/A

**This form must be attached to the Cover/Certification Form if not submitted through a Remedial Phase Online Service**

PI Numbers continued: 777089, 722429, 775706, 775998, 629388, G000044581, G000011477

**Indicate the type of submission:**

☐ Initial RE Submission

☒ Updated RE Submission

Indicate the reason for submission of an updated RE form

- ☐ Submission of an Immediate Environmental Concern (IEC) source control report;
- ☒ Submission of a Remedial Investigation Report;
- ☐ Submission of a Remedial Action Report;

Check if included in updated RE

- ☐ The known concentration or extent of contamination in any medium has increased;
- ☐ A new AOC has been identified;
- ☐ A new receptor is identified;
- ☐ A new exposure pathway has been identified.

## SECTION B. ON SITE AND SURROUNDING PROPERTY USE

1. Identify any sensitive populations/uses that are currently on-site or surrounding property usage within 200 feet of the site property boundary (*check all that apply*):

| | On-site | Off-site |
|---|---|---|
| None of the following | ☒ | ☐ |
| Residences or residential property | ☐ | ☒ |
| Public or Private Schools Grades K-12 | ☐ | ☐ |
| Child care centers | ☐ | ☐ |
| Public parks, playgrounds or other recreation areas | ☐ | ☒ |
| Other sensitive population use(s) Explain _____ | ☐ | ☐ |

If any of the above applies, attach a list of addresses, facility names, type of use, and a map depicting each location relative to the site.

2. Current site uses (*check all that apply*): See Attachment 1

| | | |
|---|---|---|
| ☐ Industrial | ☐ Residential | ☒ Commercial |
| ☐ School or child care | ☐ Government | ☐ Park or recreational use |
| ☒ Vacant | ☐ Agricultural | ☒ Other: Roadways |

3. Planned future on-site uses and off-site uses within 200 feet of the site boundary (*check all that apply*):

| On-Site | Off-Site | | On-Site | Off-Site | | On-Site | Off-Site | |
|---|---|---|---|---|---|---|---|---|
| ☐ | ☐ | Industrial | ☒ | ☒ | Residential | ☒ | ☒ | Commercial |
| ☐ | ☐ | School or child care | ☐ | ☐ | Government | ☒ | ☒ | Park or recreational use |
| ☐ | ☐ | Vacant | ☐ | ☐ | Agricultural | ☒ | ☒ | Other: Canal Crossing Redevelopment ** |

Provide a map depicting the location of the proposed changes in land use.

** Refer to http://www.tandmassociates.com/projects/planning-design-environmental-services-canal-crossing-redevelopment-area/

## SECTION C. DESCRIPTION OF CONTAMINATION

1. Identify if any of the following exist at the site:

| Yes | No | |
|---|---|---|
| ☒ | ☐ | Free product [N.J.A.C. 7:26E-1.8] identified is ☐ LNAPL* or ☒ DNAPL**. |
| | | Date identified: 10/01/2007 |
| ☐ | ☒ | Residual product [N.J.A.C. 7:26E-1.8] |
| ☒ | ☐ | Other primary source materials not identified above (e.g., buried drums, containers, unsecured friable asbestos). See form instructions for additional information. |
| | | Explain: Source material has been remediated or is in the process of being remediated. |

* LNAPL – measured thickness of .01 feet or more

**DNAPL – See *Ground Water Technical Guidance* and *USEPA Assessment and Delineation of DNAPL Source Zones at Hazardous Waste Sites* (attached as Appendix A of the NJDEP GW Guidance) available at: http://www.nj.gov/dep/srp/guidance/#pa_si_ri_gw. Also, see US EPA DNAPL Overview available at: http://cluin.org/contaminantfocus/default.focus/sec/Dense_Nonaqueous_Phase_Liquids_(DNAPLS)/cat/Overview

2. Soil Migration Pathway

Has soil contamination been delineated to the applicable Direct Contact Soil Remediation Standard pursuant to N.J.A.C. 7:26E-4.2? ☒ Yes ☐ No

Are all soils either below the applicable Direct Contact Criteria or under an institutional control (i.e. deed notice)? Source material has been remediated or is in the process of being remediated. ☐ Yes ☒ No

3. If this evaluation is submitted with a technical document that includes contaminant summary information, proceed to Section D. Otherwise, attach a brief summary of all currently available data and information to be included in the site investigation or remedial investigation report. Included with a Remedial Investigation Report

## SECTION D. GROUND WATER USE

1. Have all potentially contaminated areas of concern been evaluated to determine if there is a potential that ground water is contaminated pursuant to N.J.A.C. 7:26E-3.5? ☒ Yes ☐ No

   If "**No**," proceed to Section E.

2. Is a ground water investigation required? ☒ Yes ☐ No

   If "**No**," proceed to Section E.

3. Has a groundwater investigation been conducted? ☒ Yes ☐ No

   If "**Yes**":
   Has the laboratory data package been received? ☒ Yes ☐ No

   If the laboratory data package has not been received, provide the expected due date for data: _____ and proceed to Section E.

   If "**No**":
   Proceed to Section E.

4. Is ground water contaminated above the Ground Water Remediation Standards [N.J.A.C.7:9C]? ☒ Yes ☐ No

   If "**Yes**": Provide the date that the laboratory data package was available and confirmed contamination was identified above the Ground Water Remediation Standards. Date: 05/15/2007

   If "**No**": Proceed to Section E.

5. Has ground water contamination been delineated to the applicable Remediation Standard pursuant to N.J.A.C 7:26E-4.3? ☒ Yes ☐ No

6. What is the ground water classification for this site as per N.J.A.C. 7:9C? (*check all that apply*) See Note 1.

| | |
|---|---|
| ☐ Class I-A | ☒ Class II-A |
| ☐ Class I-PL Pinelands Protection Area | ☐ Class III-A |
| ☐ Class I-PL Pinelands Preservation Area | ☐ Class III-B |

Note 1: Groundwater contamination in the overburden has been delineated to the applicable remediation standards pursuant to N.J.A.C. 7:26E-4.3. Delineation of impacts in the bedrock zone will be discussed in a future addendum to this report.

7. Has a well search been completed? ☒ Yes ☐ No

Date of most recent or updated well search: 02/01/2021 See Attachment 2

8. Is a completed Well Search Spreadsheet or historical well search table attached and has an electronic copy of the spreadsheet been submitted to srpgis_wrs@dep.nj.gov. ☒ Yes ☐ No

**Note: Redacted wells must be excluded from all non-confidential documents including maps, tables, etc. (see RE Instructions).**

If "**No**," explain: _____

9. Are any potable or irrigation wells located within ½ mile of the currently known extent of contamination? ☐ Yes ☒ No

If "**Yes**,":

- A door to door survey is required in accordance with [N.J.A.C.7:26E-1.14(a)ii]. Attach results of the door to door survey.
- Identify if any of the following conditions exist based on the well search and door to door survey [N.J.A.C.7:26E-1.14(a)]:

| Yes | No | |
|---|---|---|
| ☐ | ☐ | Potable wells located within 500 feet from the downgradient edge of the currently known extent of contamination. |
| ☐ | ☐ | Potable wells located 250 feet upgradient or 500 feet side gradient of the currently known extent of contamination. |
| ☐ | ☐ | Ground water contamination from the discharge is located within a Tier 1 wellhead protection area (WHPA). |

10. Has sampling been conducted of ☐ potable well(s) and /or ☐ non-potable use well(s)? ☐ Yes ☒ No

If "No," provide justification then proceed to Question 12.

No potable wells or non-potable wells within 1/2 mile

11. Has contamination been identified in potable well(s), **not attributed to background conditions**, above the Class II Ground Water Remediation Standards or State Safe Drinking Water levels, N.J.A.C 7:1E, whichever is applicable? ☐ Yes ☐ No

If "**Yes**":

- Provide the date laboratory data package was received: _____
- Follow the **IEC** Guidance Document at http://www.nj.gov/dep/srp/guidance/IEC/index.html for required actions and answer the following:
- Has an engineered system response action been completed on all impacted receptors? ☐ Yes ☐ No
  Provide a brief narrative description:

Date completed: _____ NJDEP Case Manager: _____

12. Has contamination been identified in non-potable well(s), **not attributed to background conditions**, above the Class II Ground Water Remediation Standards? ☐ Yes ☒ No

If "**Yes**," provide the date laboratory data package was received: _____

13. Has the ground water use evaluation been completed pursuant to N.J.A.C. 7:26E-1.14? ☒ Yes ☐ No

This receptor evaluation is being submitted as part of a Groundwater Remedial Investigation Report. PPG and Public Service Electric and Gas Company (PSEG) are jointly responsible for remediation of manufactured gas plant (MGP) impacts including those emanating from Site 114. PSEG, as the former MGP operator, is the lead party for addressing these impacts. In 2012 and 2013, PSEG performed a VI investigation in accordance with CMX s March 2010 *Vapor Intrusion Investigation Work Plan, Former Halladay Street Gas Works, Jersey City, New Jersey.* No further evaluation of vapor intrusion as part of the Groundwater RI is necessary.

## SECTION E. VAPOR INTRUSION (VI)

1. Indicate if any of the following conditions exist that trigger a Vapor Intrusion investigation. For each condition checked "Yes", provide the date the condition was first identified (e.g. date laboratory data package was available). (*see NJDEP Vapor Intrusion Technical Guidance*)

| Yes | No | | Date Condition First Identified |
|---|---|---|---|
| ☐ | ☐ | Ground water contamination in excess of the NJDEP Vapor Intrusion Ground Water Screening Levels (VIGWSL) and within 30 feet of a building for Petroleum Hydrocarbon Compounds (PHC) or 100 feet for non-PHC compounds | _____ |
| ☐ | ☐ | Free product within 30 feet of a building for PHC or 100 feet for non-PHC compounds | _____ |
| ☐ | ☐ | Soil gas contamination detected at concentrations that exceed the Soil Gas Screening Levels (SGSL) | _____ |
| ☐ | ☐ | Indoor air contamination that exceeds the Indoor Air Screening Levels | _____ |
| ☐ | ☐ | Wet basement or sump containing free product or ground water containing detectable concentration of volatile organic contaminants | _____ |
| ☐ | ☐ | Methane generating conditions causing oxygen deficient or explosion concern | _____ |
| ☐ | ☐ | Other human or safety concern from the VI pathway (i.e. elemental mercury, unsaturated soil contamination), *explain below:* | _____ |

**If you checked "No" to <u>all</u> boxes in Question 1., proceed to Section F, "Ecological Receptors", otherwise complete the rest of this section.**

2. Has ground water contamination been delineated to the applicable Vapor Intrusion Ground Water Screening Levels pursuant to N.J.A.C 7:26E-4.3? ☐ Yes ☐ No

3. Was a site-specific screening level, modeling or other alternative approach employed for the VI pathway? ☐ Yes ☐ No

4. Identify and locate, on a scaled map, any buildings/sensitive populations that exist within the following distances from ground water contaminant concentrations above the Vapor Intrusion Ground Water Screening Levels or other specific triggers noted in Question 1 above.:

| Yes | No | |
|---|---|---|
| ☐ | ☐ | 30 feet of petroleum free product or dissolved petroleum hydrocarbon contamination in ground water |
| ☐ | ☐ | 100 feet of any non-petroleum free product (e.g. chlorinated hydrocarbons) or any non-petroleum dissolved volatile organic ground water contamination |
| ☐ | ☐ | Other specific triggers |
| ☐ | ☐ | No buildings exist within the specified distances or other specific triggers |

5. Is the vapor intrusion pathway a concern at or adjacent to the site? (if "No," attach justification) ☐ Yes ☐ No

6. Has soil gas sampling of the building(s) been conducted? ☐ Yes ☐ No
   If "**Yes**," has the laboratory data package been received? ☐ Yes ☐ No
   If the data package was received, did constituents exceed the Soil Gas Screening Levels? ☐ Yes ☐ No
   If "**No**," attach technical justification consistent with the NJDEP Vapor Intrusion Technical Guidance.

7. Has indoor air sampling been conducted at the identified building(s)? ☐ Yes ☐ No
   If "**Yes**," has the laboratory data package been received? ☐ Yes ☐ No
   If the data package has been received, did constituents exceed the Indoor Air Screening Levels? ☐ Yes ☐ No
   If "**No**," or awaiting indoor air laboratory data package, proceed to Question 12.

8 Has indoor air contamination been identified but not suspected to be from a discharge? (if "**Yes**," attach justification) ..... ☐ Yes ☐ No

9. Were indoor air results above the NJDEP's Rapid Action Levels? ..... ☐ Yes ☐ No

If "**Yes**":

- Provide the date laboratory data package was received: _____
- Follow the **IEC** Guidance Document at http://www.nj.gov/dep/srp/guidance/index.html#iec for required actions and answer the following:
- Was the IEC engineering system response for control implemented for all impacted structures? ..... ☐ Yes ☐ No

  Date implemented: _____ NJDEP Case Manager: _____

10. Were the results of indoor air sampling above the NJDEP's Indoor Air Screening Levels but at, or below, the Rapid Action Levels ..... ☐ Yes ☐ No

If "**Yes**," answer the following:

- Provide the date laboratory data package was received: _____
- Has the Vapor Concern (VC) Response Action Form notifying the NJDEP of the exceedances been submitted? ..... ☐ Yes ☐ No

  Date: _____
- Has a plan to mitigate and monitor the exposure been submitted? ..... ☐ Yes ☐ No

  Date: _____
- Has the Mitigation Response Action Report been submitted? ..... ☐ Yes ☐ No

  Date: _____

11. Do one or more buildings have an Indeterminate VI Pathway status? ..... ☐ Yes ☐ No

If "**Yes**," attach a list of the building(s) with address(s) and block/lot(s)

12. Has the vapor intrusion investigation been completed? ..... ☐ Yes ☐ No

If "**No**", is the vapor intrusion investigation stepping out as part of the site investigation or remedial investigation. (If "No," attach justification) ..... ☐ Yes ☐ No

## SECTION F. ECOLOGICAL RECEPTORS

1. Has an Ecological Evaluation (EE) been conducted? [N.J.A.C. 7:26E-1.16] ..... ☒ Yes ☐ No

   Date conducted: 05/13/2011
2. Are any site-related contaminants above any Ecological Screening Criteria? ..... ☐ Yes ☒ No
3. Are there any Environmentally Sensitive Natural Resources (ESNRs) on or adjacent to the site, or potentially impacted by site related contamination? [N.J.A.C. 7:26E-1.16] ..... ☐ Yes ☒ No
4. Do any potential or complete migration pathways exist between Contaminant of Potential Ecological Concern (COPECs) and ESNRs, or did historic migration pathways exist? ..... ☐ Yes ☒ No

**If You answered "No" to Questions 2, 3, or 4, above <u>Stop Here</u> (form is complete).**

5. If site-related free or residual product is/was present, does/did a potential or complete migration pathway exist to an ESNR? ..... ☐ Yes ☐ No
6. Do the results of an EE trigger a remedial investigation of ecological receptors? [N.J.A.C. 7:26E-4.8] ..... ☐ Yes ☐ No

   If "**Yes**", has a remedial investigation of ecological receptors been conducted? ..... ☐ Yes ☐ No

   Date conducted: _____

7. Do available data indicate an impact (COPECs above Ecological Screening Criteria in ESNRs) to Ecological Receptor(s), Surface water, or Sediment? ☐ Yes ☐ No

   If "**Yes**,"

   a) Check all ESNRs or media that apply:

   ☐ Surface water ☐ Sediment ☐ Soil ☐ Wetlands

   b) If this information is not submitted with an ecological evaluation that includes contaminant summary information, attach a brief summary of all currently available data and a description of all actions to be taken to mitigate exposure.

8. Have COPECs been fully delineated to the Ecological Screening Criteria [N.J.A.C. 7:26E-4.8(a)] in:

   a) Migration pathways ☐ Yes ☐ No

   b) ESNR ☐ Yes ☐ No

9. Has an Ecological Risk Assessment been conducted? ☐ Yes ☐ No

10. Provide the following information for any on-site and/or off-site surface water body, which is potentially impacted by the site related discharges:

| Surface Water Body Name | Stream Classification | Antidegradation Designation | Trout Production | Trout Maintenance |
|---|---|---|---|---|
| | | | ☐ | ☐ |
| | | | ☐ | ☐ |
| | | | ☐ | ☐ |
| | | | ☐ | ☐ |
| | | | ☐ | ☐ |
| | | | ☐ | ☐ |

11. Has a Program Interest (PI) or Permit number been issued for any regulated areas by the Division of Land Use Regulation? (e.g. wetlands, transition areas, flood hazard areas, coastal areas, tidelands, etc.). ☐ Yes ☐ No

    If "**Yes**,":

    Identify the type(s) of regulated areas: _____

    Provide the Land Use Regulation Program (LURP) PI or Permit number(s) for the site:

    _____

12 Are there any **pending** applications for LURP jurisdiction letters or approvals under review by the NJDEP for the remediation? ☐ Yes ☐ No

13. Are there any **valid** LURP jurisdiction letters or approvals issued for the remediation? ☐ Yes ☐ No

Completed forms should be sent to the municipal clerk, designate health department, and:

**Project: Geophysical Survey – Garfield Avenue and Caven Point Road, Jersey City, NJ**

Dear Ron;

The following is a brief letter report detailing the results of the geophysical survey performed at the above referenced site. Site maps and/or pertinent ground penetrating radar (GPR) transects are contained in the report and Appendix A. It would be helpful to review Appendix A and the site maps when reading this report. TPI's standard practice is to indicate the results of the geophysical survey by marking all identified utility lines, tanks, and GPR anomalies etc. with chalk, paint or flags. It should be noted that this report is a means of transferring data and results of data interpretation, which was performed during the time allotted for the fieldwork.

Project Scope and Visual Site Inspection

TPI Environmental, Inc. (TPI) was contracted by Aecom (client) to clear soil borings and locate private utilities in the immediate vicinity of the soil borings. The site consists of multiple businesses and a warehouse located at the above address and as indicated on Figure 1. Upon arrival to the site on July 07, 2017, TPI performed a site walk to review One Call utility mark outs and evidence of other on-site utilities in the vicinity of the soil boring locations. During the site walk the following areas of interest were noted;

- Utilities to be investigated during this survey include private electric, communication, sanitary sewer, storm sewer, water, and gas.

Methodology

Geophysical surveys are typically accomplished by employing the following techniques; GPR, Fisher TW6 electromagnetic metal detection (TW6 EM), a Geonics EM61-MK2 Time – Domain Electromagnetic Detector unit (EM61), radio frequency line locating (RF), and magnetics. Known utilities are typically traced with the RF unit, GPR, and the TW6 EM unit depending on the size, matrix and conductive properties of the line. The EM61 is a high power, high sensitivity metal detector capable of detecting both ferrous and non-ferrous metal. The TW6 EM unit sounds an audible alarm in the presence of a large mass of metal such as an UST. A description and discussion of these geophysical methods as well as TPI's standard procedures for performing geophysical surveys is found in Appendix A. In general, "blind surveys" are typically performed by initially scanning the site with a TW6 EM unit and/or an EM61 unit and noting areas of relatively high EM response. Then locations with high EM response are further investigated with GPR. EM units are typically not effective and practical in areas underlain with reinforced concrete and/or the presence of ubiquitous metallic objects.

Geophysical Survey Results

The geophysical survey at this site was accomplished with the RF and GPR units. Known utilities were traced with RF and confirmed with GPR. Proposed soil boring locations were scanned and cleared with a combination of RF and GPR. Results of the geophysical survey were marked on the ground with paint and a map of the survey results, as well as pertinent GPR images, are contained in this report. Results of the geophysical survey are as follows;

- Private water, sanitary sewer, storm sewer, and gas utilities were located and marked with paint in addition to any linear, "pipe-style" anomalies.
- Eight (8) soil boring locations were scanned, moved as needed, and marked with white paint.

TPI completes non-intrusive geophysical surveys using equipment and techniques representing best available technology. TPI does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen and varying site-specific conditions such as metal-reinforced concrete. In practical terms, TPI serves to reduce the risk of encountering subsurface utilities during excavation operations or greatly increase the chance of locating man made subsurface objects depending on the goal of the project. The results of this investigation should only be used as a tool and should not be considered a guarantee regarding the presence or absence of USTs or piping.

If you should have any questions or concerns, please do not hesitate to contact us.

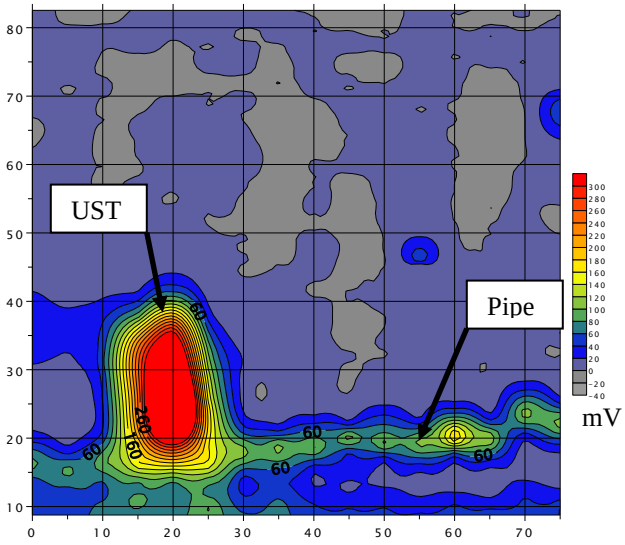
## Geonics EM61-MK2

The EM61 is a high resolution time-domain metal detector which is used to detect ferrous and non-ferrous metallic objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field, which induces eddy currents in nearby metallic objects. The decay of these currents is measured by two receiver coils mounted on the coil assembly. The responses are recorded and displayed by an integrated computer based digital data logger with real time numeric and graphic display. Two ports on the logger allows simultaneous collection of EM and GPS data. For further processing and interpretation data can be transferred to a laptop computer in the field and a color contoured map of the EM61 reponse is prepared (see below).

**EM61 Color Contoured Map**



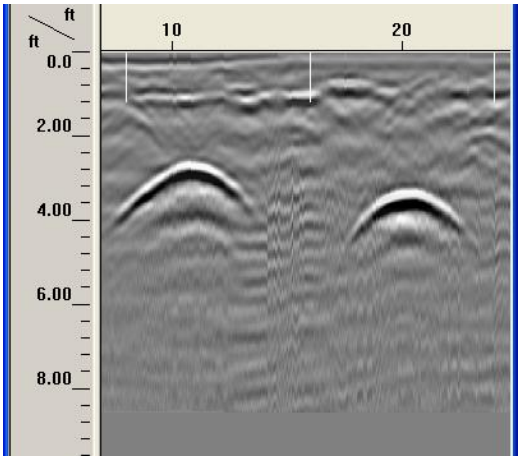
The EM61-MK2 detects a single 55 gallon drum at a depth of over 10-feet beneath the instrument, yet it is relatively insentsitive to interference from nearby surface metal such as fences, buildings, cars, etc. By making the measurement at a relatively long time after termination of the primary pulse, the response is practically independent of the electrical conductivity of the ground.

Due to its unique coil arrangements, the response curve is a single well defined positive peak greatly facilitating quick and accurate location of the target, the depth of which can usually be estimated from the width of the response and/or from relative response from each of the two receiver coils.

## GPR

This method is one of the most powerful and cost effective methods of locating man made objects and stratigraphic layers in the subsurface. It is an active method that transmits electromagnetic pulses into the ground, the radar pulses are reflected from materials or layers of differing dielectric and electrical conductive properties. The GPR computer measures the elapsed time in billionths of a second (nanoseconds) from when the pulses are sent and when they are received back at the surface that can then be converted to depth. Results of the radar scan are displayed as a continuous cross-section of the subsurface on the computer screen in real time. Metallic materials such as tanks, pipes, conduits, rebar etc. have vastly different dielectric properties then soils so there reflections are striking and relatively easy to identify. Pipes and tanks constructed of PVC, concrete, and terracotta also produce distinct reflections, however, these reflections are typically not as striking as metallic materials. A typical radar image of two metallic underground storage tanks is found below.

**GPR Image of Two Metallic USTs**



GPR surveys are conducted with the most advanced GPR equipment currently available

including a Geophysical Survey Systems (GSSI) SIR-3000 subsurface radar unit with a 400 MHz antenna. The 400 MHz antenna has a depth range of approximately 20-feet and other antennas may be employed with the system depending on specific site conditions and objectives of the survey. The GPR transect data may be saved on the internal hard drive and transferred to a PC for storage, printing, and post processing. GSSI is the world leader in the development of GPR systems and was the first company to commercialize GPR in 1970. GPR hardware and software has improved dramatically over the last several years allowing for relatively rapid and economical GPR surveys. With 3-dimensional capabilities, the latest GPR software takes data processing a step farther then the former 2-dimensional viewing method. Three-dimensional visualization helps you to see the whole picture, giving you a powerful tool to interpret complex utility layouts and identify subtle linear features that may have otherwise been missed.

GPR surveys are typically conducted by searching for GPR hyperbolas indicative of subsurface pipes or tanks signatures in the vicinity of known entities. Theses signatures are marked on the ground and areas progressively further from the known entity are scanned and marked. This process is continued until the GPR operator performed enough scans to determine and mark the subsurface pipe, tank or anomaly. During this process the GPR data is typically not saved due to the immense size of the data files. After this phase of the GPR survey is completed, representative GPR transects or grids are performed and saved for the report and post processing. Some of the factors that may negatively affect GPR results include clay soils, rebar in concrete, high moisture content, depth of the target, and the integrity, size, and material of the target.

## TW-6 EM Unit

TPI routinely employs a Fisher TW-6 electromagnetic metal detector when performing GPR surveys. The TW-6 creates an electromagnetic field with a transmitting coil and measures the strength of that field with a receiving coil. As the TW-6 passes over electrically conductive materials such as metal tanks or drums the field is distorted and the instrument produces an audible alarm based on the degree of the distortion. The TW-6 can detect conductive materials the size of drums or small tanks to depths of 10-feet. The instrument is actually a relatively poor metal detector which makes it ideal for locating large conductive materials such as metal drums, medium to large metal pipes, reinforced concrete pipes, and metal tanks. A more sensitive metal detector would produce "false positives" on small pieces of metal that are typically found in fill and throughout developed sites. If the survey area is underlain by reinforced concrete or cars and other large surficial metallic features are within 10-feet, the TW-6 will not be useful.

## Line Locating

Line locating is performed with a Radiodetection RD400 PXL-2 line locator with a 433 HCTX-2 transmitter. The transmitter emits a specific radio or electromagnetic signal which is indirectly induced or directly conducted onto the metallic line. The transmitter is capable of producing frequencies of 512 Hz, 8 kHz, or 33 kHz and the receiver is configured for the specific transmitted frequency. The induced signal is coupled with the line by either using an induction clamp which surrounds an exposed line or placing the transmitter above a buried line and transmitting the signal to it. The receiver may also be used in a passive locate mode (power) to identify the presence of current carrying lines. Nonmetallic lines may also be located by snaking a sonde down accessible lines with push rods. A sonde is a small transmitter that emits a specific electromagnetic frequency which can be detected by the receiver at depths of 12 to 16-feet.

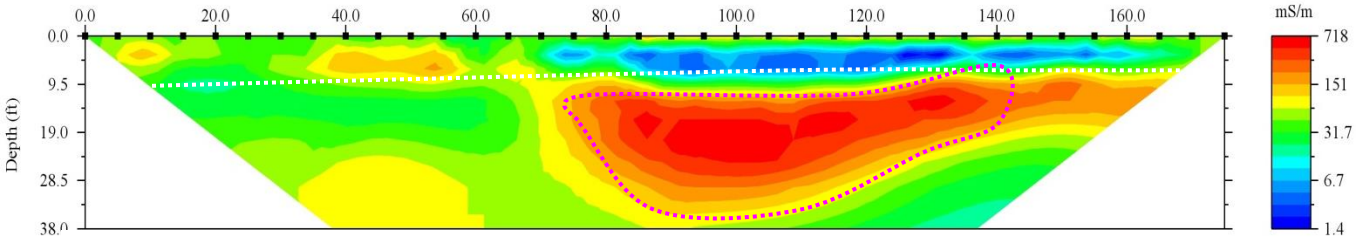
## Resistivity

TPI conducts subsurface resistivity surveys using the AGI SuperSting R8 IP Earth Resistivity and IP Meter. The SuperSting unit measures the voltage drop of an induced electrical current across numerous electrodes as it travels through the electrically heterogenous subsurface. Multiple survey profiles are completed in this manner based upon the specific conditions of the field area in order to assemble a complete characterization of the ground resistivity properties. The resistivity data is then processed and examined for evidence of significant subsurface features including bedrock surfaces, perched groundwater tables, cavities/sinkholes, or potential contaminant plumes.

**AGI SuperSting R8 IP Earth Resistivity and IP Meter assembly.**



**Resistivity pseudosection across a backfilled canal. Approximately 10' of high resistivity/low conductivity surficial fill (blue) over low resistivity/high conductivity canal backfill (orange-red).**

## Down-hole Conductivity

TPI is also able to collect down-hole soil conductivity data with an electric conductivity probe. The EC probe is driven into the subsurface by a direct push unit. A current is induced in the native soil between two contacts at opposite ends of the probe. The soil conductivity is then calculated based upon the ratio of induced current to resultant voltage across the probe. Down-hole EC profiling is particularly useful in the efficient determination of soil grain size (permeable sands vs impermeable clays), water content, and metal content.

**Project: Geophysical Survey – Forrest Street and Garfield Avenue, Jersey City, NJ**

Dear Ron;

The following is a brief letter report detailing the results of the geophysical survey performed at the above referenced site. Site maps and/or pertinent ground penetrating radar (GPR) transects are contained in the report and Appendix A. It would be helpful to review Appendix A and the site maps when reading this report. TPI's standard practice is to indicate the results of the geophysical survey by marking all identified utility lines, tanks, and GPR anomalies etc. with chalk, paint or flags. It should be noted that this report is a means of transferring data and results of data interpretation, which was performed during the time allotted for the fieldwork.

Project Scope and Visual Site Inspection

TPI Environmental, Inc. (TPI) was contracted by Aecom (client) to clear soil borings and locate private utilities in the immediate vicinity of the soil borings. The site consists of a parking lot, sidewalk, construction area, and building with adjacent paved areas located at the above address and as indicated on Figures 1 through 5. Upon arrival to the site on September 27, 2017, TPI performed a site walk to review One Call utility mark outs and evidence of other on-site utilities in the vicinity of the soil boring locations. During the site walk the following areas of interest were noted;

- Utilities to be investigated during this survey include private electric, communication, sanitary sewer, storm sewer, water, and gas.

Methodology

Geophysical surveys are typically accomplished by employing the following techniques; GPR, Fisher TW6 electromagnetic metal detection (TW6 EM), a Geonics EM61-MK2 Time – Domain Electromagnetic Detector unit (EM61), radio frequency line locating (RF), and magnetics. Known utilities are typically traced with the RF unit, GPR, and the TW6 EM unit depending on the size, matrix and conductive properties of the line. The EM61 is a high power, high sensitivity metal detector capable of detecting both ferrous and non-ferrous metal. The TW6 EM unit sounds an audible alarm in the presence of a large mass of metal such as an UST. A description and discussion of these geophysical methods as well as TPI's standard procedures for performing geophysical surveys is found in Appendix A. In general, "blind surveys" are typically performed by initially scanning the site with a TW6 EM unit and/or an EM61 unit and noting areas of relatively high EM response. Then locations with high EM response are further investigated with GPR. EM units are typically not effective and practical in areas underlain with reinforced concrete and/or the presence of ubiquitous metallic objects.

Geophysical Survey Results

The geophysical survey at this site was accomplished with the RF and GPR units. Known utilities were traced with RF and confirmed with GPR. Proposed soil boring locations were scanned and cleared with a combination of RF and GPR. Results of the geophysical survey were marked on the ground with paint and a map of the survey results, as well as pertinent GPR images, are contained in this report. Results of the geophysical survey are as follows;

- Private electric, communication, sanitary sewer, storm sewer, water, and gas utilities were located and marked with paint in addition to sheet piling and any linear, "pipe-style" anomalies.
- Six (6) soil boring locations were scanned, moved as needed, and marked with white paint.

TPI completes non-intrusive geophysical surveys using equipment and techniques representing best available technology. TPI does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen and varying site-specific conditions such as metal-reinforced concrete. In practical terms, TPI serves to reduce the risk of encountering subsurface utilities during excavation operations or greatly increase the chance of locating man made subsurface objects depending on the goal of the project. The results of this investigation should only be used as a tool and should not be considered a guarantee regarding the presence or absence of USTs or piping.

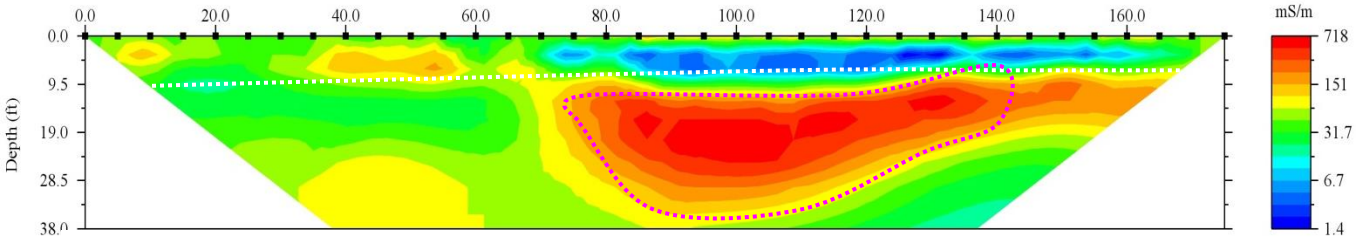
## Resistivity

TPI conducts subsurface resistivity surveys using the AGI SuperSting R8 IP Earth Resistivity and IP Meter. The SuperSting unit measures the voltage drop of an induced electrical current across numerous electrodes as it travels through the electrically heterogenous subsurface. Multiple survey profiles are completed in this manner based upon the specific conditions of the field area in order to assemble a complete characterization of the ground resistivity properties. The resistivity data is then processed and examined for evidence of significant subsurface features including bedrock surfaces, perched groundwater tables, cavities/sinkholes, or potential contaminant plumes.

**AGI SuperSting R8 IP Earth Resistivity and IP Meter assembly.**



**Resistivity pseudosection across a backfilled canal. Approximately 10' of high resistivity/low conductivity surficial fill (blue) over low resistivity/high conductivity canal backfill (orange-red).**

## Down-hole Conductivity

TPI is also able to collect down-hole soil conductivity data with an electric conductivity probe. The EC probe is driven into the subsurface by a direct push unit. A current is induced in the native soil between two contacts at opposite ends of the probe. The soil conductivity is then calculated based upon the ratio of induced current to resultant voltage across the probe. Down-hole EC profiling is particularly useful in the efficient determination of soil grain size (permeable sands vs impermeable clays), water content, and metal content.

**Project: Geophysical Survey – Berry Lane Park, 1000 Garfield Avenue, Jersey City, NJ**

Dear Shannon;

The following is a brief letter report detailing the results of the geophysical survey performed at the above referenced site. Site maps and/or pertinent ground penetrating radar (GPR) transects are contained in the report and Appendix A. It would be helpful to review Appendix A and the site maps when reading this report. TPI's standard practice is to indicate the results of the geophysical survey by marking all identified utility lines, tanks, and GPR anomalies etc. with chalk, paint or flags. It should be noted that this report is a means of transferring data and results of data interpretation, which was performed during the time allotted for the fieldwork.

Project Scope and Visual Site Inspection

TPI Environmental, Inc. (TPI) was contracted by AECOM (client) to clear proposed monitoring well locations and to locate private utilities in the immediate vicinity of the wells. The site consists of a recreational park located at the above address and as indicated on Figure 1. Upon arrival to the site on January 24, 2018, TPI performed a site walk to review One Call utility mark outs and evidence of other on-site utilities in the vicinity of the well locations. During the site walk the following areas of interest were noted;

- Utilities to be investigated during this survey include; electric, water, storm sewer, communication, and irrigation.

Methodology

Geophysical surveys are typically accomplished by employing the following techniques; GPR, Fisher TW6 electromagnetic metal detection (TW6 EM), a Geonics EM61-MK2 Time – Domain Electromagnetic Detector unit (EM61), radio frequency line locating (RF), and magnetics. Known utilities are typically traced with the RF unit, GPR, and the TW6 EM unit depending on the size, matrix and conductive properties of the line. The EM61 is a high power, high sensitivity metal detector capable of detecting both ferrous and non-ferrous metal. The TW6 EM unit sounds an audible alarm in the presence of a large mass of metal such as an UST. A description and discussion of these geophysical methods as well as TPI's standard procedures for performing geophysical surveys is found in Appendix A. In general, "blind surveys" are typically performed by initially scanning the site with a TW6 EM unit and/or an EM61 unit and noting areas of relatively high EM response. Then locations with high EM response are further investigated with GPR. EM units are typically not effective and practical in areas underlain with reinforced concrete and/or the presence of ubiquitous metallic objects.

Geophysical Survey Results

The geophysical survey at this site was accomplished with the RF and GPR units. Known utilities were traced with RF and confirmed with GPR. Proposed monitoring well locations were scanned and cleared with a combination of RF and GPR. Results of the geophysical survey were marked on the ground with paint and a map of the survey results, as well as pertinent GPR images, are contained in this report. Results of the geophysical survey are as follows;

- Electric, water, storm sewer, communication, and irrigation utilities in addition to linear pipe-style anomalies, were located and marked with paint.
- Two monitoring well locations were scanned, moved as needed, and marked with paint.

TPI completes non-intrusive geophysical surveys using equipment and techniques representing best available technology. TPI does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen and varying site-specific conditions such as metal-reinforced concrete. In practical terms, TPI serves to reduce the risk of encountering subsurface utilities during excavation operations or greatly increase the chance of locating man made subsurface objects depending on the goal of the project. The results of this investigation should only be used as a tool and should not be considered a guarantee regarding the presence or absence of USTs or piping.

If you should have any questions or concerns, please do not hesitate to contact us.

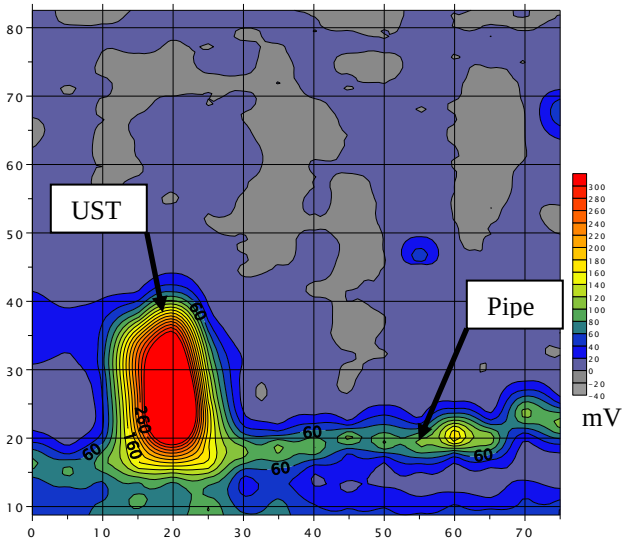
## Geonics EM61-MK2

The EM61 is a high resolution time-domain metal detector which is used to detect ferrous and non-ferrous metallic objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field, which induces eddy currents in nearby metallic objects. The decay of these currents is measured by two receiver coils mounted on the coil assembly. The responses are recorded and displayed by an integrated computer based digital data logger with real time numeric and graphic display. Two ports on the logger allows simultaneous collection of EM and GPS data. For further processing and interpretation data can be transferred to a laptop computer in the field and a color contoured map of the EM61 reponse is prepared (see below).

**EM61 Color Contoured Map**



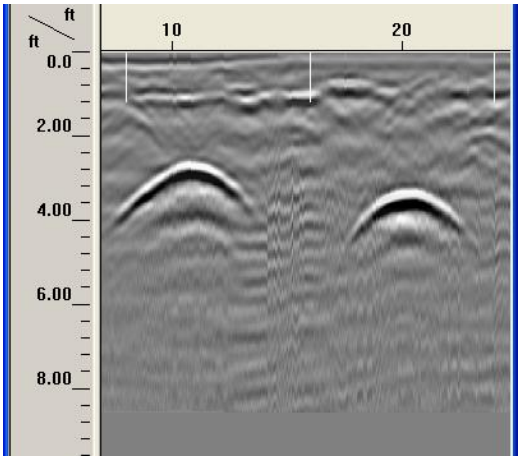
The EM61-MK2 detects a single 55 gallon drum at a depth of over 10-feet beneath the instrument, yet it is relatively insentsitive to interference from nearby surface metal such as fences, buildings, cars, etc. By making the measurement at a relatively long time after termination of the primary pulse, the response is practically independent of the electrical conductivity of the ground.

Due to its unique coil arrangements, the response curve is a single well defined positive peak greatly facilitating quick and accurate location of the target, the depth of which can usually be estimated from the width of the response and/or from relative response from each of the two receiver coils.

## GPR

This method is one of the most powerful and cost effective methods of locating man made objects and stratigraphic layers in the subsurface. It is an active method that transmits electromagnetic pulses into the ground, the radar pulses are reflected from materials or layers of differing dielectric and electrical conductive properties. The GPR computer measures the elapsed time in billionths of a second (nanoseconds) from when the pulses are sent and when they are received back at the surface that can then be converted to depth. Results of the radar scan are displayed as a continuous cross-section of the subsurface on the computer screen in real time. Metallic materials such as tanks, pipes, conduits, rebar etc. have vastly different dielectric properties then soils so there reflections are striking and relatively easy to identify. Pipes and tanks constructed of PVC, concrete, and terracotta also produce distinct reflections, however, these reflections are typically not as striking as metallic materials. A typical radar image of two metallic underground storage tanks is found below.

**GPR Image of Two Metallic USTs**



GPR surveys are conducted with the most advanced GPR equipment currently available

724 S. 27th Street

including a Geophysical Survey Systems (GSSI) SIR-3000 subsurface radar unit with a 400 MHz antenna. The 400 MHz antenna has a depth range of approximately 20-feet and other antennas may be employed with the system depending on specific site conditions and objectives of the survey. The GPR transect data may be saved on the internal hard drive and transferred to a PC for storage, printing, and post processing. GSSI is the world leader in the development of GPR systems and was the first company to commercialize GPR in 1970. GPR hardware and software has improved dramatically over the last several years allowing for relatively rapid and economical GPR surveys. With 3-dimensional capabilities, the latest GPR software takes data processing a step farther then the former 2-dimensional viewing method. Three-dimensional visualization helps you to see the whole picture, giving you a powerful tool to interpret complex utility layouts and identify subtle linear features that may have otherwise been missed.

GPR surveys are typically conducted by searching for GPR hyperbolas indicative of subsurface pipes or tanks signatures in the vicinity of known entities. Theses signatures are marked on the ground and areas progressively further from the known entity are scanned and marked. This process is continued until the GPR operator performed enough scans to determine and mark the subsurface pipe, tank or anomaly. During this process the GPR data is typically not saved due to the immense size of the data files. After this phase of the GPR survey is completed, representative GPR transects or grids are performed and saved for the report and post processing. Some of the factors that may negatively affect GPR results include clay soils, rebar in concrete, high moisture content, depth of the target, and the integrity, size, and material of the target.

## TW-6 EM Unit

TPI routinely employs a Fisher TW-6 electromagnetic metal detector when performing GPR surveys. The TW-6 creates an electromagnetic field with a transmitting coil and measures the strength of that field with a receiving coil. As the TW-6 passes over electrically conductive materials such as metal tanks or drums the field is distorted and the instrument produces an audible alarm based on the degree of the distortion. The TW-6 can detect conductive materials the size of drums or small tanks to depths of 10-feet. The instrument is actually a relatively poor metal detector which makes it ideal for locating large conductive materials such as metal drums, medium to large metal pipes, reinforced concrete pipes, and metal tanks. A more sensitive metal detector would produce "false positives" on small pieces of metal that are typically found in fill and throughout developed sites. If the survey area is underlain by reinforced concrete or cars and other large surficial metallic features are within 10-feet, the TW-6 will not be useful.

## Line Locating

Line locating is performed with a Radiodetection RD400 PXL-2 line locator with a 433 HCTX-2 transmitter. The transmitter emits a specific radio or electromagnetic signal which is indirectly induced or directly conducted onto the metallic line. The transmitter is capable of producing frequencies of 512 Hz, 8 kHz, or 33 kHz and the receiver is configured for the specific transmitted frequency. The induced signal is coupled with the line by either using an induction clamp which surrounds an exposed line or placing the transmitter above a buried line and transmitting the signal to it. The receiver may also be used in a passive locate mode (power) to identify the presence of current carrying lines. Nonmetallic lines may also be located by snaking a sonde down accessible lines with push rods. A sonde is a small transmitter that emits a specific electromagnetic frequency which can be detected by the receiver at depths of 12 to 16-feet.

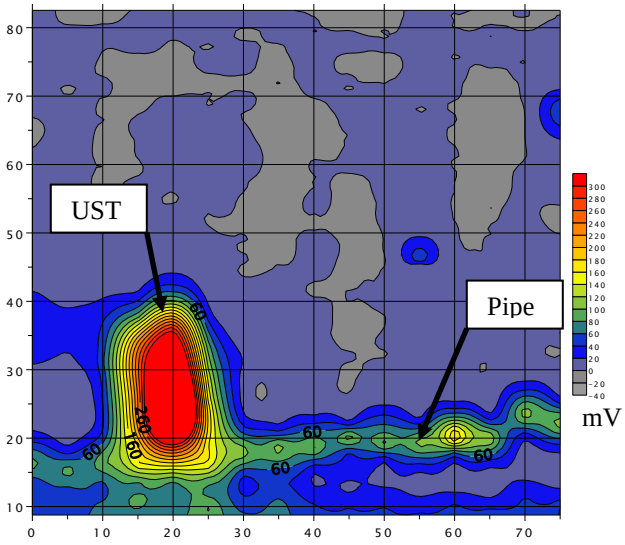
For further processing and interpretation data can be transferred to a laptop computer in the field and a color contoured map of the EM61 reponse is prepared (see below).

**EM61 Color Contoured Map**



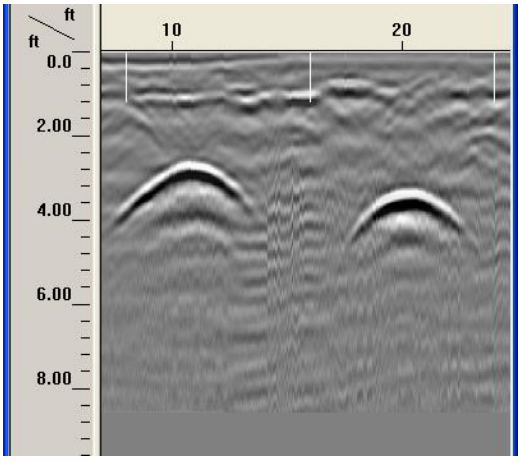
The EM61-MK2 detects a single 55 gallon drum at a depth of over 10-feet beneath the instrument, yet it is relatively insentsitive to interference from nearby surface metal such as fences, buildings, cars, etc. By making the measurement at a relatively long time after termination of the primary pulse, the response is practically independent of the electrical conductivity of the ground.

Due to its unique coil arrangements, the response curve is a single well defined positive peak greatly facilitating quick and accurate location of the target, the depth of which can usually be estimated from the width of the response and/or from relative response from each of the two receiver coils.

## GPR

This method is one of the most powerful and cost effective methods of locating man made objects and stratigraphic layers in the subsurface. It is an active method that transmits electromagnetic pulses into the ground, the radar pulses are reflected from materials or layers of differing dielectric and electrical conductive properties. The GPR computer measures the elapsed time in billionths of a second (nanoseconds) from when the pulses are sent and when they are received back at the surface that can then be converted to depth. Results of the radar scan are displayed as a continuous cross-section of the subsurface on the computer screen in real time. Metallic materials such as tanks, pipes, conduits, rebar etc. have vastly different dielectric properties then soils so there reflections are striking and relatively easy to identify. Pipes and tanks constructed of PVC, concrete, and terracotta also produce distinct reflections, however, these reflections are typically not as striking as metallic materials. A typical radar image of two metallic underground storage tanks is found below.

**GPR Image of Two Metallic USTs**



GPR surveys are conducted with the most advanced GPR equipment currently available

including a Geophysical Survey Systems (GSSI) SIR-3000 subsurface radar unit with a 400 MHz antenna. The 400 MHz antenna has a depth range of approximately 20-feet and other antennas may be employed with the system depending on specific site conditions and objectives of the survey. The GPR transect data may be saved on the internal hard drive and transferred to a PC for storage, printing, and post processing. GSSI is the world leader in the development of GPR systems and was the first company to commercialize GPR in 1970. GPR hardware and software has improved dramatically over the last several years allowing for relatively rapid and economical GPR surveys. With 3-dimensional capabilities, the latest GPR software takes data processing a step farther then the former 2-dimensional viewing method. Three-dimensional visualization helps you to see the whole picture, giving you a powerful tool to interpret complex utility layouts and identify subtle linear features that may have otherwise been missed.

GPR surveys are typically conducted by searching for GPR hyperbolas indicative of subsurface pipes or tanks signatures in the vicinity of known entities. Theses signatures are marked on the ground and areas progressively further from the known entity are scanned and marked. This process is continued until the GPR operator performed enough scans to determine and mark the subsurface pipe, tank or anomaly. During this process the GPR data is typically not saved due to the immense size of the data files. After this phase of the GPR survey is completed, representative GPR transects or grids are performed and saved for the report and post processing. Some of the factors that may negatively affect GPR results include clay soils, rebar in concrete, high moisture content, depth of the target, and the integrity, size, and material of the target.

## TW-6 EM Unit

TPI routinely employs a Fisher TW-6 electromagnetic metal detector when performing GPR surveys. The TW-6 creates an electromagnetic field with a transmitting coil and measures the strength of that field with a receiving coil. As the TW-6 passes over electrically conductive materials such as metal tanks or drums the field is distorted and the instrument produces an audible alarm based on the degree of the distortion. The TW-6 can detect conductive materials the size of drums or small tanks to depths of 10-feet. The instrument is actually a relatively poor metal detector which makes it ideal for locating large conductive materials such as metal drums, medium to large metal pipes, reinforced concrete pipes, and metal tanks. A more sensitive metal detector would produce "false positives" on small pieces of metal that are typically found in fill and throughout developed sites. If the survey area is underlain by reinforced concrete or cars and other large surficial metallic features are within 10-feet, the TW-6 will not be useful.

## Line Locating

Line locating is performed with a Radiodetection RD400 PXL-2 line locator with a 433 HCTX-2 transmitter. The transmitter emits a specific radio or electromagnetic signal which is indirectly induced or directly conducted onto the metallic line. The transmitter is capable of producing frequencies of 512 Hz, 8 kHz, or 33 kHz and the receiver is configured for the specific transmitted frequency. The induced signal is coupled with the line by either using an induction clamp which surrounds an exposed line or placing the transmitter above a buried line and transmitting the signal to it. The receiver may also be used in a passive locate mode (power) to identify the presence of current carrying lines. Nonmetallic lines may also be located by snaking a sonde down accessible lines with push rods. A sonde is a small transmitter that emits a specific electromagnetic frequency which can be detected by the receiver at depths of 12 to 16-feet.

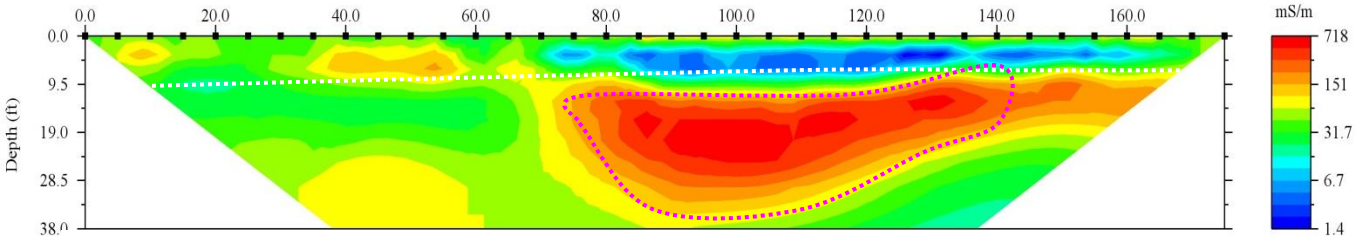
## Resistivity

TPI conducts subsurface resistivity surveys using the AGI SuperSting R8 IP Earth Resistivity and IP Meter. The SuperSting unit measures the voltage drop of an induced electrical current across numerous electrodes as it travels through the electrically heterogenous subsurface. Multiple survey profiles are completed in this manner based upon the specific conditions of the field area in order to assemble a complete characterization of the ground resistivity properties. The resistivity data is then processed and examined for evidence of significant subsurface features including bedrock surfaces, perched groundwater tables, cavities/sinkholes, or potential contaminant plumes.

**AGI SuperSting R8 IP Earth Resistivity and IP Meter assembly.**



**Resistivity pseudosection across a backfilled canal. Approximately 10' of high resistivity/low conductivity surficial fill (blue) over low resistivity/high conductivity canal backfill (orange-red).**

## Down-hole Conductivity

TPI is also able to collect down-hole soil conductivity data with an electric conductivity probe. The EC probe is driven into the subsurface by a direct push unit. A current is induced in the native soil between two contacts at opposite ends of the probe. The soil conductivity is then calculated based upon the ratio of induced current to resultant voltage across the probe. Down-hole EC profiling is particularly useful in the efficient determination of soil grain size (permeable sands vs impermeable clays), water content, and metal content.

Piscataway, NJ 08854

**Project: Geophysical Survey – Site 114, Carteret Avenue, Jersey City, NJ**

Dear Shree;

The following is a brief letter report detailing the results of the geophysical survey performed at the above referenced site. Site maps and/or pertinent ground penetrating radar (GPR) transects are contained in the report and Appendix A. It would be helpful to review Appendix A and the site maps when reading this report. TPI's standard practice is to indicate the results of the geophysical survey by marking all identified utility lines, tanks, and GPR anomalies etc. with chalk, paint or flags. It should be noted that this report is a means of transferring data and results of data interpretation, which was performed during the time allotted for the fieldwork.

Project Scope and Visual Site Inspection

TPI Environmental, Inc. (TPI) was contracted by Aecom (client) to clear proposed well locations and to locate private utilities in the immediate vicinity of the wells. The site consists of an active construction site, located at the above address and as indicated on Figure 1. Upon arrival to the site on March 25, 2020, TPI performed a site walk to review One Call utility mark outs and evidence of other on-site utilities in the vicinity of the soil boring locations. During the site walk the following areas of interest were noted;

- Utilities to be investigated during this survey include private electric and remediation piping.

Methodology

Geophysical surveys are typically accomplished by employing the following techniques; GPR, Fisher TW6 electromagnetic metal detection (TW6 EM), a Geonics EM61-MK2 Time – Domain Electromagnetic Detector unit (EM61), radio frequency line locating (RF), and magnetics. Known utilities are typically traced with the RF unit, GPR, and the TW6 EM unit depending on the size, matrix and conductive properties of the line. The EM61 is a high power, high sensitivity metal detector capable of detecting both ferrous and non-ferrous metal. The TW6 EM unit sounds an audible alarm in the presence of a large mass of metal such as an UST. A description and discussion of these geophysical methods as well as TPI's standard procedures for performing geophysical surveys is found in Appendix A. In general, "blind surveys" are typically performed by initially scanning the site with a TW6 EM unit and/or an EM61 unit and noting areas of relatively high EM response. Then locations with high EM response are further investigated with GPR. EM units are typically not effective and practical in areas underlain with reinforced concrete and/or the presence of ubiquitous metallic objects.

Geophysical Survey Results

The geophysical survey at this site was accomplished with the RF and GPR units. Known utilities were traced with RF and confirmed with GPR. The proposed well locations were scanned and cleared with a combination of RF and GPR. Results of the geophysical survey were marked on the ground with paint and a map of the survey results is contained in this report. Results of the geophysical survey are as follows;

- Private electric utilities, in addition to remediation piping, were located and marked with paint.
- Six (6) proposed well locations were scanned, moved as needed, and marked with white paint.

TPI completes non-intrusive geophysical surveys using equipment and techniques representing best available technology. TPI does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen and varying site-specific conditions such as metal-reinforced concrete. In practical terms, TPI serves to reduce the risk of encountering subsurface utilities during excavation operations or greatly increase the chance of locating man made subsurface objects depending on the goal of the project. The results of this investigation should only be used as a tool and should not be considered a guarantee regarding the presence or absence of USTs or piping.

If you should have any questions or concerns, please do not hesitate to contact us.

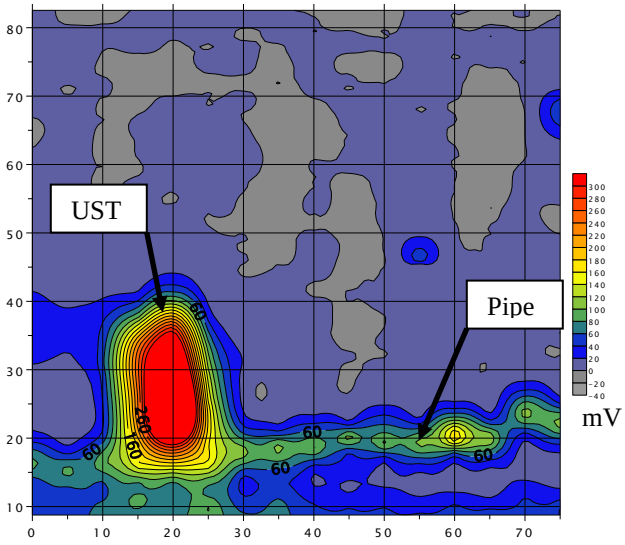
## Geonics EM61-MK2

The EM61 is a high resolution time-domain metal detector which is used to detect ferrous and non-ferrous metallic objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field, which induces eddy currents in nearby metallic objects. The decay of these currents is measured by two receiver coils mounted on the coil assembly. The responses are recorded and displayed by an integrated computer based digital data logger with real time numeric and graphic display. Two ports on the logger allows simultaneous collection of EM and GPS data. For further processing and interpretation data can be transferred to a laptop computer in the field and a color contoured map of the EM61 reponse is prepared (see below).

**EM61 Color Contoured Map**



The EM61-MK2 detects a single 55 gallon drum at a depth of over 10-feet beneath the instrument, yet it is relatively insentsitive to interference from nearby surface metal such as fences, buildings, cars, etc. By making the measurement at a relatively long time after termination of the primary pulse, the response is practically independent of the electrical conductivity of the ground.

Due to its unique coil arrangements, the response curve is a single well defined positive peak greatly facilitating quick and accurate location of the target, the depth of which can usually be estimated from the width of the response and/or from relative response from each of the two receiver coils.

**Project: Geophysical Survey – 70 Carteret Avenue, Jersey City, NJ**

Dear Shree;

The following is a brief letter report detailing the results of the geophysical survey performed at the above referenced site. Site maps and/or pertinent ground penetrating radar (GPR) transects are contained in the report and Appendix A. It would be helpful to review Appendix A and the site maps when reading this report. TPI's standard practice is to indicate the results of the geophysical survey by marking all identified utility lines, tanks, and GPR anomalies etc. with chalk, paint or flags. It should be noted that this report is a means of transferring data and results of data interpretation, which was performed during the time allotted for the fieldwork.

Project Scope and Visual Site Inspection

TPI Environmental, Inc. (TPI) was contracted by AECOM (client) to clear soil borings and to locate private utilities in the immediate vicinity of the soil borings. The site consists of a large gravel-filled lot currently under environmental remediation, located at the above address and as indicated on Figures 1 – 4. Upon arrival to the site on December 01, 2020, TPI performed a site walk to review One Call utility mark outs and evidence of other on-site utilities in the vicinity of the soil boring locations. During the site walk the following areas of interest were noted;

- Utilities to be investigated during this survey include private electric, water, and sheet piling.

Methodology

Geophysical surveys are typically accomplished by employing the following techniques; GPR, Fisher TW6 electromagnetic metal detection (TW6 EM), a Geonics EM61-MK2 Time – Domain Electromagnetic Detector unit (EM61), radio frequency line locating (RF), and magnetics. Known utilities are typically traced with the RF unit, GPR, and the TW6 EM unit depending on the size, matrix and conductive properties of the line. The EM61 is a high power, high sensitivity metal detector capable of detecting both ferrous and non-ferrous metal. The TW6 EM unit sounds an audible alarm in the presence of a large mass of metal such as an UST. A description and discussion of these geophysical methods as well as TPI's standard procedures for performing geophysical surveys is found in Appendix A. In general, "blind surveys" are typically performed by initially scanning the site with a TW6 EM unit and/or an EM61 unit and noting areas of relatively high EM response. Then locations with high EM response are further investigated with GPR. EM units are typically not effective and practical in areas underlain with reinforced concrete and/or the presence of ubiquitous metallic objects.

Geophysical Survey Results

The geophysical survey at this site was accomplished with the RF and GPR units. Known utilities were traced with RF and confirmed with GPR. Proposed soil boring locations were scanned and cleared with a combination of RF and GPR. Results of the geophysical survey were marked on the ground with paint and maps of the survey results are contained in this report. Results of the geophysical survey are as follows;

- Sheet piling, electric and water utilities were located and marked with paint.
- Seven soil boring locations were scanned, moved as needed, and marked with white paint.

TPI completes non-intrusive geophysical surveys using equipment and techniques representing best available technology. TPI does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen and varying site-specific conditions such as metal-reinforced concrete. In practical terms, TPI serves to reduce the risk of encountering subsurface utilities during excavation operations or greatly increase the chance of locating man made subsurface objects depending on the goal of the project. The results of this investigation should only be used as a tool and should not be considered a guarantee regarding the presence or absence of USTs or piping.

If you should have any questions or concerns, please do not hesitate to contact us.

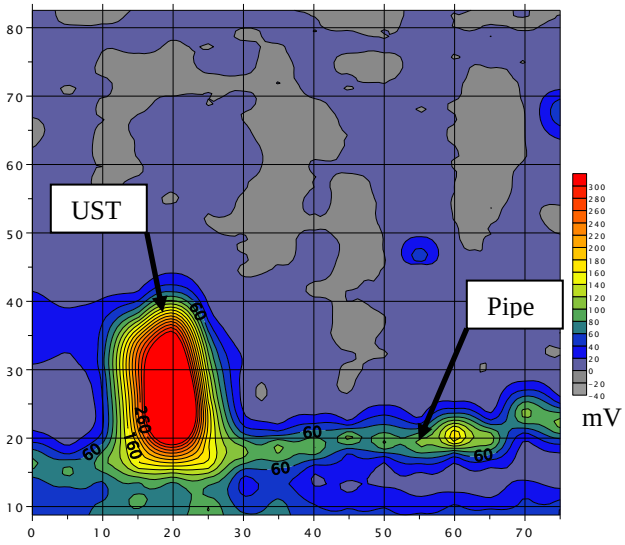
# Survey Methods

**Attachment A**
**TPI's Geophysical Survey Equipment & Methods**

## Geonics EM61-MK2

The EM61 is a high resolution time-domain metal detector which is used to detect ferrous and non-ferrous metallic objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field, which induces eddy currents in nearby metallic objects. The decay of these currents is measured by two receiver coils mounted on the coil assembly. The responses are recorded and displayed by an integrated computer based digital data logger with real time numeric and graphic display. Two ports on the logger allows simultaneous collection of EM and GPS data. For further processing and interpretation data can be transferred to a laptop computer in the field and a color contoured map of the EM61 reponse is prepared (see below).

**EM61 Color Contoured Map**



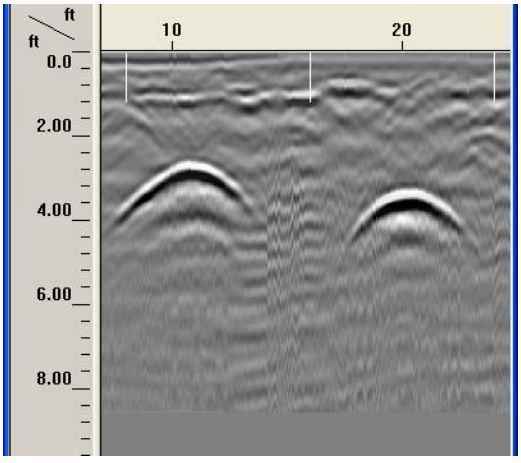
The EM61-MK2 detects a single 55 gallon drum at a depth of over 10-feet beneath the instrument, yet it is relatively insentsitive to interference from nearby surface metal such as fences, buildings, cars, etc. By making the measurement at a relatively long time after termination of the primary pulse, the response is practically independent of the electrical conductivity of the ground.

Due to its unique coil arrangements, the response curve is a single well defined positive peak greatly facilitating quick and accurate location of the target, the depth of which can usually be estimated from the width of the response and/or from relative response from each of the two receiver coils.

## GPR

This method is one of the most powerful and cost effective methods of locating man made objects and stratigraphic layers in the subsurface. It is an active method that transmits electromagnetic pulses into the ground, the radar pulses are reflected from materials or layers of differing dielectric and electrical conductive properties. The GPR computer measures the elapsed time in billionths of a second (nanoseconds) from when the pulses are sent and when they are received back at the surface that can then be converted to depth. Results of the radar scan are displayed as a continuous cross-section of the subsurface on the computer screen in real time. Metallic materials such as tanks, pipes, conduits, rebar etc. have vastly different dielectric properties then soils so there reflections are striking and relatively easy to identify. Pipes and tanks constructed of PVC, concrete, and terracotta also produce distinct reflections, however, these reflections are typically not as striking as metallic materials. A typical radar image of two metallic underground storage tanks is found below.

**GPR Image of Two Metallic USTs**



GPR surveys are conducted with the most advanced GPR equipment currently available

including a Geophysical Survey Systems (GSSI) SIR-3000 subsurface radar unit with a 400 MHz antenna. The 400 MHz antenna has a depth range of approximately 20-feet and other antennas may be employed with the system depending on specific site conditions and objectives of the survey. The GPR transect data may be saved on the internal hard drive and transferred to a PC for storage, printing, and post processing. GSSI is the world leader in the development of GPR systems and was the first company to commercialize GPR in 1970. GPR hardware and software has improved dramatically over the last several years allowing for relatively rapid and economical GPR surveys. With 3-dimensional capabilities, the latest GPR software takes data processing a step farther then the former 2-dimensional viewing method. Three-dimensional visualization helps you to see the whole picture, giving you a powerful tool to interpret complex utility layouts and identify subtle linear features that may have otherwise been missed.

GPR surveys are typically conducted by searching for GPR hyperbolas indicative of subsurface pipes or tanks signatures in the vicinity of known entities. Theses signatures are marked on the ground and areas progressively further from the known entity are scanned and marked. This process is continued until the GPR operator performed enough scans to determine and mark the subsurface pipe, tank or anomaly. During this process the GPR data is typically not saved due to the immense size of the data files. After this phase of the GPR survey is completed, representative GPR transects or grids are performed and saved for the report and post processing. Some of the factors that may negatively affect GPR results include clay soils, rebar in concrete, high moisture content, depth of the target, and the integrity, size, and material of the target.

## TW-6 EM Unit

TPI routinely employs a Fisher TW-6 electromagnetic metal detector when performing GPR surveys. The TW-6 creates an electromagnetic field with a transmitting coil and measures the strength of that field with a receiving coil. As the TW-6 passes over electrically conductive materials such as metal tanks or drums the field is distorted and the instrument produces an audible alarm based on the degree of the distortion. The TW-6 can detect conductive materials the size of drums or small tanks to depths of 10-feet. The instrument is actually a relatively poor metal detector which makes it ideal for locating large conductive materials such as metal drums, medium to large metal pipes, reinforced concrete pipes, and metal tanks. A more sensitive metal detector would produce "false positives" on small pieces of metal that are typically found in fill and throughout developed sites. If the survey area is underlain by reinforced concrete or cars and other large surficial metallic features are within 10-feet, the TW-6 will not be useful.

## Line Locating

Line locating is performed with a Radiodetection RD400 PXL-2 line locator with a 433 HCTX-2 transmitter. The transmitter emits a specific radio or electromagnetic signal which is indirectly induced or directly conducted onto the metallic line. The transmitter is capable of producing frequencies of 512 Hz, 8 kHz, or 33 kHz and the receiver is configured for the specific transmitted frequency. The induced signal is coupled with the line by either using an induction clamp which surrounds an exposed line or placing the transmitter above a buried line and transmitting the signal to it. The receiver may also be used in a passive locate mode (power) to identify the presence of current carrying lines. Nonmetallic lines may also be located by snaking a sonde down accessible lines with push rods. A sonde is a small transmitter that emits a specific electromagnetic frequency which can be detected by the receiver at depths of 12 to 16-feet.

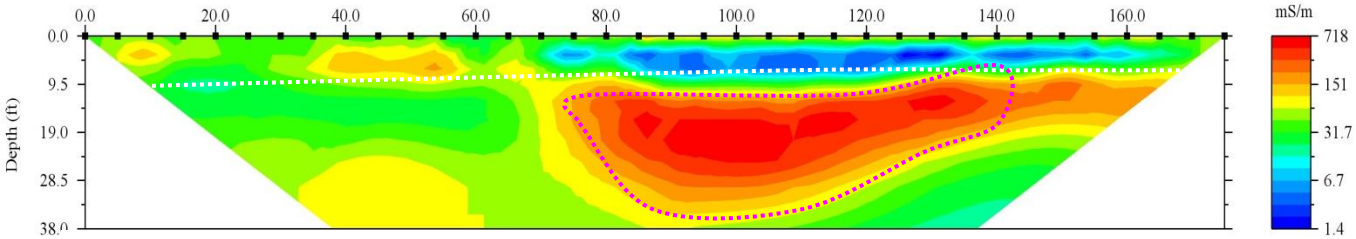
## Resistivity

TPI conducts subsurface resistivity surveys using the AGI SuperSting R8 IP Earth Resistivity and IP Meter. The SuperSting unit measures the voltage drop of an induced electrical current across numerous electrodes as it travels through the electrically heterogenous subsurface. Multiple survey profiles are completed in this manner based upon the specific conditions of the field area in order to assemble a complete characterization of the ground resistivity properties. The resistivity data is then processed and examined for evidence of significant subsurface features including bedrock surfaces, perched groundwater tables, cavities/sinkholes, or potential contaminant plumes.

**AGI SuperSting R8 IP Earth Resistivity and IP Meter assembly.**



**Resistivity pseudosection across a backfilled canal. Approximately 10' of high resistivity/low conductivity surficial fill (blue) over low resistivity/high conductivity canal backfill (orange-red).**

## Down-hole Conductivity

TPI is also able to collect down-hole soil conductivity data with an electric conductivity probe. The EC probe is driven into the subsurface by a direct push unit. A current is induced in the native soil between two contacts at opposite ends of the probe. The soil conductivity is then calculated based upon the ratio of induced current to resultant voltage across the probe. Down-hole EC profiling is particularly useful in the efficient determination of soil grain size (permeable sands vs impermeable clays), water content, and metal content.

**Project: Geophysical Survey – Site 114, Carteret Avenue, Jersey City, NJ**

Dear Shree;

The following is a brief letter report detailing the results of the geophysical survey performed at the above referenced site. Site maps and/or pertinent ground penetrating radar (GPR) transects are contained in the report and Appendix A. It would be helpful to review Appendix A and the site maps when reading this report. TPI's standard practice is to indicate the results of the geophysical survey by marking all identified utility lines, tanks, and GPR anomalies etc. with chalk, paint or flags. It should be noted that this report is a means of transferring data and results of data interpretation, which was performed during the time allotted for the fieldwork.

Project Scope and Visual Site Inspection

TPI Environmental, Inc. (TPI) was contracted by Aecom (client) to clear proposed well locations and to locate private utilities in the immediate vicinity of the wells. The site consists of an active construction site, located at the above address and as indicated on Figure 1. Upon arrival to the site on March 11, 2020, TPI performed a site walk to review One Call utility mark outs and evidence of other on-site utilities in the vicinity of the soil boring locations. During the site walk the following areas of interest were noted;

- Utilities to be investigated during this survey include private electric and remediation piping.

Methodology

Geophysical surveys are typically accomplished by employing the following techniques; GPR, Fisher TW6 electromagnetic metal detection (TW6 EM), a Geonics EM61-MK2 Time – Domain Electromagnetic Detector unit (EM61), radio frequency line locating (RF), and magnetics. Known utilities are typically traced with the RF unit, GPR, and the TW6 EM unit depending on the size, matrix and conductive properties of the line. The EM61 is a high power, high sensitivity metal detector capable of detecting both ferrous and non-ferrous metal. The TW6 EM unit sounds an audible alarm in the presence of a large mass of metal such as an UST. A description and discussion of these geophysical methods as well as TPI's standard procedures for performing geophysical surveys is found in Appendix A. In general, "blind surveys" are typically performed by initially scanning the site with a TW6 EM unit and/or an EM61 unit and noting areas of relatively high EM response. Then locations with high EM response are further investigated with GPR. EM units are typically not effective and practical in areas underlain with reinforced concrete and/or the presence of ubiquitous metallic objects.

Geophysical Survey Results

The geophysical survey at this site was accomplished with the RF and GPR units. Known utilities were traced with RF and confirmed with GPR. The proposed well locations were scanned and cleared with a combination of RF and GPR. Results of the geophysical survey were marked on the ground with paint and a map of the survey results is contained in this report. Results of the geophysical survey are as follows;

- Private electric utilities, in addition to remediation piping, were located and marked with paint.
- Five proposed well locations were scanned, moved as needed, and marked with white paint.

TPI completes non-intrusive geophysical surveys using equipment and techniques representing best available technology. TPI does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen and varying site-specific conditions such as metal-reinforced concrete. In practical terms, TPI serves to reduce the risk of encountering subsurface utilities during excavation operations or greatly increase the chance of locating man made subsurface objects depending on the goal of the project. The results of this investigation should only be used as a tool and should not be considered a guarantee regarding the presence or absence of USTs or piping.

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Date Stamp
(For Department use only)

## SECTION A. SITE NAME AND LOCATION

Site Name: PPG Site 114
List all AKAs: Garfield Avenue Group Chrome Sites (PPG)
Street Address: Garfield Avenue and Carteret Avenue
Municipality: City of Jersey City (Township, Borough or City)
County: Hudson Zip Code: 07305
Program Interest (PI) Number(s): G000008738 Case Tracking Number(s):

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner PPG Industries
2. Well Location (Street Address) Site 114, Garfield Avenue and Carteret Avenue, Jersey City, NJ
3. Well Location (Municipal Block and Lot) Block # Lot #

## SECTION C. WELL LOCATION SPECIFICS

1. Well Permit Number (This number must be permanently affixed to the well casing):
2. Site Well Number (As shown on application or plans): 114-MW2B1-2I
3. Geographic Coordinate NAD 83 to nearest 1/100 of a second:
   Latitude: North 40°42'35.68" Longitude: West 74°04'07.94"
4. New Jersey State Plane Coordinates NAD 83 datum, US survey feet units, to nearest foot:
   North 683809.0 East 611639.0
5. Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 23.95
   Elevation of Top of Outer Casing: 24.14 Elevation of Ground: 24.1
   *Check one:* [X] NAVD 88 [ ] NGVD29 [ ] On Site Datum [ ] Other
6. Source of elevation datum (benchmark, number/description and elevation/datum). If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation (referencing NAVD 88).
   The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS network on May 10, 2012. Benchmark reference stations: NJI2, NJNT, NYBP, NYBR and NYVH.
7. Significant observations and notes:
   On site control points used: Spike and Tag in the top of curb at the intersection of east side of Carteret Avenue and south side of Halladay Street, Elev= 10.76' and Spike and Tag in the face of the retaining wall for the railroad at the north end of Site 114, Elev= 18.02'

## SECTION D. LAND SURVEYOR'S CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

## SECTION A. SITE NAME AND LOCATION

Site Name: Garfield Avenue Group Chrome Sites (PPG)
List all AKAs: PPG Site 114
Street Address: Garfield Avenue and Carteret Avenue
Municipality: City of Jersey City (Township, Borough or City)
County: Hudson Zip Code: 07305
Program Interest (PI) Number(s): Case Tracking Number(s):

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner PPG Industries
2. Well Location (Street Address) 86 Forrest Street, Jersey City, NJ
3. Well Location (Municipal Block and Lot) Block # 21501 Lot # 15

## SECTION C. WELL LOCATION SPECIFICS

1. Well Permit Number (This number must be permanently affixed to the well casing):
2. Site Well Number (As shown on application or plans): 114-MW24AR
3. Geographic Coordinate NAD 83 to nearest 1/100 of a second:
   Latitude: North 40°42'34.42" Longitude: West 74°04'07.55"
4. New Jersey State Plane Coordinates NAD 83 datum, US survey feet units, to nearest foot:
   North 683681.8 East 611670.2
5. Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 11.36
   Elevation of Top of Outer Casing: 11.81 Elevation of Ground: 11.8
   *Check one:* [X] NAVD 88 [ ] NGVD29 [ ] On Site Datum [ ] Other
6. Source of elevation datum (benchmark, number/description and elevation/datum). If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation (referencing NAVD 88).
   The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS Network on May 10, 2012. Benchmark: Reference Stations NJI2, NJNT, NYBP, NYBR and NYVH.
7. Significant observations and notes:
   Lot and Block information is for reference only and does not necessarily indicate that property, boundary, or lot lines have been surveyed relative to this well.

## SECTION D. LAND SURVEYOR'S CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

5. Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 10.64
   Elevation of Top of Outer Casing: 11.07 Elevation of Ground: 11.1
   *Check one:* [X] NAVD 88 [ ] NGVD29 [ ] On Site Datum [ ] Other
6. Source of elevation datum (benchmark, number/description and elevation/datum). If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation (referencing NAVD 88).
   The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS Network on May 10, 2012. Benchmark: Reference Stations NJI2, NJNT, NYBP, NYBR and NYVH.
7. Significant observations and notes:
   Lot and Block information is for reference only and does not necessarily indicate that property, boundary, or lot lines have been surveyed relative to this well.

## SECTION D. LAND SURVEYOR'S CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Service ID: 1173272

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Service ID: 1173313

Street Address: Garfield Avenue and Carteret Avenue
Municipality: City of Jersey City (Township, Borough or City)
County: Hudson Zip Code: 07305
Program Interest (PI) Number(s): Case Tracking Number(s):

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner: PPG Industries
2. Well Location (Street Address): Garfield Avenue and Carteret Avenue, Jersey City, NJ
3. Well Location (Municipal Block and Lot): Block # 21501 Lot # 18

## SECTION C. WELL LOCATION SPECIFICS

1. Well Permit Number (This number must be permanently affixed to the well casing): E202002719
2. Site Well Number (As shown on application or plans): 114-MW52C
3. Geographic Coordinate NAD 83 to nearest 1/100 of a second:
   Latitude: North 40°42'32.93" Longitude: West 74°04'15.81"
4. New Jersey State Plane Coordinates NAD 83 datum, US survey feet units, to nearest foot:
   North 683527.7 East 611034.7
5. Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 15.85
   Elevation of Top of Outer Casing: 16.47 Elevation of Ground: 14.0
   *Check one:* [X] NAVD 88 [ ] NGVD29 [ ] On Site Datum [ ] Other
6. Source of elevation datum (benchmark, number/description and elevation/datum). If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation (referencing NAVD 88).
   The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS network on May 10, 2012. Benchmark: Reference Stations NJI2, NJNT, NYBP, NYBR and NYVH. On-site benchmarks have been set.
7. Significant observations and notes:
   Lot and Block information is for reference only and does not necessarily indicate that property, boundary, or lot lines have been surveyed relative to this well.

## SECTION D. LAND SURVEYOR'S CERTIFICATION

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

**Monitoring Well Certification Form B - Location Certification**

Date Stamp
(For Department use only)

## SECTION A. SITE NAME AND LOCATION

Site Name: Garfield Avenue Group Chrome Sites (PPG)
List all AKAs: PPG Site 114
Street Address: Garfield Avenue and Carteret Avenue
Municipality: City of Jersey City (Township, Borough or City)
County: Hudson Zip Code: 07305
Program Interest (PI) Number(s): Case Tracking Number(s):

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner PPG Industries
2. Well Location (Street Address) Garfield Avenue and Carteret Avenue, Jersey City, NJ
3. Well Location (Municipal Block and Lot) Block # 21501 Lot # 18

## SECTION C. WELL LOCATION SPECIFICS

1. Well Permit Number (This number must be permanently affixed to the well casing): E202002720
2. Site Well Number (As shown on application or plans): 114-MW53C
3. Geographic Coordinate NAD 83 to nearest 1/100 of a second:
   Latitude: North 40°42'32.01" Longitude: West 74°04'14.22"
4. New Jersey State Plane Coordinates NAD 83 datum, US survey feet units, to nearest foot:
   North 683435.6 East 611157.6
5. Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 15.08
   Elevation of Top of Outer Casing: 15.86 Elevation of Ground: 13.9
   *Check one:* [X] NAVD 88 [ ] NGVD29 [ ] On Site Datum [ ] Other
6. Source of elevation datum (benchmark, number/description and elevation/datum). If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation (referencing NAVD 88).
   The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS network on May 10, 2012. Benchmark: Reference Stations NJI2, NJNT, NYBP, NYBR and NYVH. On-site benchmarks have been set.
7. Significant observations and notes:
   Lot and Block information is for reference only and does not necessarily indicate that property, boundary, or lot lines have been surveyed relative to this well.

## SECTION D. LAND SURVEYOR'S CERTIFICATION

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Service ID: 1173381

**(For Department use only)**

## SECTION A. SITE NAME AND LOCATION

Site Name: Hudson COunty Chromate Site 114

List all AKAs: PPG Site 114

Street Address: 70 Carteret Avenue

Municipality: Jersey City (Township, Borough or City)

County: Hudson Zip Code: 07305

Program Interest (PI) Number(s): G000008791; G000005480 Case Tracking Number(s): N/A

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner PPG
2. Well Location (Street Address) 2 Dakota Street
3. Well Location (Municipal Block and Lot) Block# 21501 Lot # 16

## SECTION C. WELL LOCATION SPECIFICS

| | |
|---|---|
| 1. Well Permit Number (This number must be permanently affixed to the well casing):.. | E202002722 |
| 2. Site Well Number as shown on application or plans): ..... | 114-MW55C |
| 3. Well Completion Date: ..... | 3/27/20 |
| 4. Distance from Top of Casing (cap off) to ground surface (nearest 0.01'): ..... | 2.13 (Field measured) |
| 5. Total Depth of Well to the nearest ½ foot: ..... | 70.78 |
| 6. Depth to Top of Screen (or top of open hole) from top of casing (nearest 0.01'):..... | 70.13 (Field Measured) |
| 7. Screen Length (or length of open hole) in feet: ..... | 1 |
| 8. Screen or Slot Size: ..... | 0.01 in |
| 9. Screen or Slot Material: ..... | PVC |
| 10. Casing Material (PVC, steel, or other – specify): ..... | PVC |
| 11. Casing Diameter (inches): ..... | 2 in |
| 12. Static Water Level from top of casing at the time of installation (nearest 0.01'): ..... | 5.59 |
| 13. Yield (gallons per minute): ..... | .5 |
| 14. Development Techinque (specify): ..... | whale pump |
| 15. Length of Time well is developed/pumped or bailed (hours and minutes): ..... | 7 hour 15 minutes |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Service ID: 1173845

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Service ID: 1173769

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Service ID: 1173901

| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |

| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

# WELL PERMIT

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

New Well

| DEVIATION INFORMATION | |
|---|---|
| Purpose: | |
| Unusual Conditions: | |
| Reason for Deviation: | |
| Proposed Well Construction | |

| GENERAL CONDITIONS/REQUIREMENTS |
|---|
| A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1] |
| A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1] |
| All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1] |
| If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1] |
| If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1] |
| If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i] |
| In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1] |
| In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1] |
| In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1] |
| The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1] |
| The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1] |
| This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1] |
| This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1] |
| This permit is NONTRANSFERABLE [N.J.A.C. 7:9D] |
| This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1] |

## SECTION A. SITE NAME AND LOCATION

Site Name: Berry Lane Park

List all AKAs:

Street Address: 1 Berry Road

Municipality: Jersey City (Township, Borough or City)

County: Hudson Zip Code: 07305

Program Interest (PI) Number(s): Case Tracking Number(s):

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner: City of Jersey City
2. Well Location (Street Address): 1 Berry Road
3. Well Location (Municipal Block and Lot) Block# 18901 Lot # 18

## SECTION C. WELL LOCATION SPECIFICS

| | |
|---|---|
| 1. Well Permit Number (This number must be permanently affixed to the well casing): | E201711855 |
| 2. Site Well Number as shown on application or plans): | MW-CR-3D |
| 3. Well Completion Date: | 2/2/18 |
| 4. Distance from Top of Casing (cap off) to ground surface (nearest 0.01'): | |
| 5. Total Depth of Well to the nearest ½ foot: | 46' |
| 6. Depth to Top of Screen (or top of open hole) from top of casing (nearest 0.01'): | 41' |
| 7. Screen Length (or length of open hole) in feet: | 5' |
| 8. Screen or Slot Size: | 0.010" |
| 9. Screen or Slot Material: | PVC |
| 10. Casing Material (PVC, steel, or other – specify): | PVC |
| 11. Casing Diameter (inches): | 2" |
| 12. Static Water Level from top of casing at the time of installation (nearest 0.01'): | 7.5 |
| 13. Yield (gallons per minute): | 2 GPM |
| 14. Development Techinque (specify): | Pump and Surge |
| 15. Length of Time well is developed/pumped or bailed (hours and minutes): | 2 hours |

**New Jersey Department of Environmental Protection**
Site Remediation Program

**Monitoring Well Certification Form B - Location Certification**

Date Stamp
(For Department use only)

## SECTION A. SITE NAME AND LOCATION

Site Name: Garfield Avenue Group Chrome Sites (PPG)
List all AKAs: PPG Site 114
Street Address: Garfield Avenue and Carteret Avenue
Municipality: City of Jersey City (Township, Borough or City)
County: Hudson Zip Code: 07305
Program Interest (PI) Number(s): Case Tracking Number(s):

## SECTION B. WELL OWNER AND LOCATION

1. Name of Well Owner PPG Industries
2. Well Location (Street Address) 1000 Garfield Avenue, Jersey City, NJ
3. Well Location (Municipal Block and Lot) Block # 19803 Lot # 8

## SECTION C. WELL LOCATION SPECIFICS

1. Well Permit Number (This number must be permanently affixed to the well casing):
2. Site Well Number (As shown on application or plans): MW-CR-3D
3. Geographic Coordinate NAD 83 to nearest 1/100 of a second:
   Latitude: North 40°42'37.45" Longitude: West 74°04'10.47"
4. New Jersey State Plane Coordinates NAD 83 datum, US survey feet units, to nearest foot:
   North 683987.8 East 611443.5
5. Elevation of Top of Inner Casing (cap off) at reference mark (nearest 0.01'): 14.88
   Elevation of Top of Outer Casing: 15.20 Elevation of Ground: 15.2
   *Check one:* [X] NAVD 88 [ ] NGVD29 [ ] On Site Datum [ ] Other
6. Source of elevation datum (benchmark, number/description and elevation/datum). If an on-site datum is used, identify here, assume datum of 100', and give approximated actual elevation (referencing NAVD 88).
   The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS Network on May 10, 2012. Benchmark: Reference Stations NJI2, NJNT, NYBP, NYBR and NYVH.
7. Significant observations and notes:
   Lot and Block information is for reference only and does not necessarily indicate that property, boundary, or lot lines have been surveyed relative to this well.

## SECTION D. LAND SURVEYOR'S CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

| MW6C | 13.93 | 12.90 | 683686.7 | 611301.5 | 6/13/2018 |

Notes:

1. The horizontal datum is the New Jersey State Plane Coordinate System NAD83 verified by differential GPS observations from the NGS CORS Network on September 3, 2015 using reference stations NJHT and NYBR.

2. The vertical datum is the North American Vertical Datum of 1988 (NAVD88) GEOID09 verified by differential GPS observations from the NGS CORS network on May 10, 2012.  Benchmark reference stations: NJI2, NJNT, NYBP, NYBR and NYVH.

3. All coordinates and elevations shown hereon are in U.S. Survey Feet.

4. All monitoring wells on this chart have been resurveyed to reflect a modification to the inner casing.

# Low Flow Groundwater Sample Collection Record

**Well ID:** 114-MW37A
Client: PPG
Project Number: 60550261.GA.GW.RI.GWSA/60544821.RAWP
Site Location: GA Group Sites, Jersey City
Field Personnel: Kyle Willis

Date: 9/26/2017
Start Time (24 HR): 0837
Finish Time (24 HR): 0950
Weather Conditions: 70°F mostly cloudy

**Well & Water Level Data (Measured from Top of Casing)**

Well Length (feet): 15.0
Depth to Water (feet): 4.53
Depth to Bottom (feet): 15.0
Length of Water Column (feet) 10.47
Screened Interval (feet bgs) 10.0 - 15.0

Casing Diameter (inches): 2
Material: PVC
Calculated System Volume (gallons):
Pump Depth Intake (feet below TOC) 12.5 ft bgs

**Field Testing Equipment**

| Equipment | Make | Model | Serial Number |
|---|---|---|---|

# Low Flow Ground Water Sample Collection Record

Client: PPG Industries  Date: 11/13/17  Time: Start 900 am/pm
Project No: 60317455  Finish _____ am/pm
Site Location: Garfield Avenue Sites
Weather Conds: 43°F rain  Collector: JA / JC

**1. WATER LEVEL DATA: (measured from Top of Casing)**

a. Total Well Length 12.00  c. Length of Water Column 9.23 (a-b)  Casing Diameter/Material 2" / PVC

b. Water Table Depth 2.77  d. Calculated System Volume (see back) 1.5 gal

**2. WELL PURGE DATA**

a. Purge Method: Bladder Pump

b. Acceptance Criteria defined (see workplan)

| | | | |
|---|---|---|---|
| - Temperature | 3% | -D.O. | 10% |
| - pH | ± 1.0 unit | - ORP | ± 10mV |
| - Sp. Cond. | 3% | - Drawdown | < 0.3' |

c. Field Testing Equipment used:

| | Make | Model | Serial Number |
|---|---|---|---|
| | YSI | 650 MDS | 17953 |
| | HACH | 2100 Q | 17070CC59586 |

| Time (24hr) | Volume Removed (Liters) | Temp. (°C) | pH | Spec. Cond. (mS/cm) | DO (mg/L) | ORP (mV) | Turbidity (NTU) | Flow Rate (ml/min) | Drawdown (feet) | Color | Odor |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 915 | - | 16.14 | 6.84 | 1.647 | 3.71 | 165.8 | 359 | 200 | 2.51 | brown | none |
| 920 | - | 16.75 | 6.81 | 1.671 | 2.79 | 8.6 | 289 | 200 | 2.68 | brown | none |
| 925 | - | 17.03 | 6.81 | 1.677 | 2.07 | -40.5 | 275 | 200 | 2.69 | brown | none |

(continued on back)

d. Acceptance criteria pass/fail

| | Yes | No | N/A |
|---|---|---|---|
| Has required volume been removed | ☐ | ☐ | ☒ |
| Has required turbidity been reached | ☒ | ☐ | ☐ |
| Have parameters stabilized | ☒ | ☐ | ☐ |

If no or N/A - Explain below.
No minimum purge volume required for low-flow sampling.

**3. SAMPLE COLLECTION:** Method: Low Flow

| Sample ID | Container Type | No. of Containers | Preservation | Analysis Req. | Time |
|---|---|---|---|---|---|
| 114-MW44A | 500mL PL | 2 | $HNO_3$ / None | Metals / XCR | 1030 |
| FSP-FB-20171113 | 500mL PL | 2 | $HNO_3$ / None | Metals / XCR | |

# Low Flow Ground Water Sample Collection Record

Client: PPG Industries
Project No: ~~60317455~~ 60550261
Site Location: Garfield Avenue Sites
Weather Conds: 40's overcast

Date: 12/12/2017
Time: Start 0945 (am/pm)
(SR) Finish ~~1000~~ 1305 (am/pm)
Collector: SHREE RAVI

1. **WATER LEVEL DATA: (measured from Top of Casing)**

a. Total Well Length 18 ft
b. Water Table Depth 5.88 ft
c. Length of Water Column _____ (a-b)
d. Calculated System Volume (see back) _____

Casing Diameter/Material: 4" PVC

2. **WELL PURGE DATA**

a. Purge Method: low flow w/ bladder pump.

b. Acceptance Criteria defined (see workplan)

| | | | |
|---|---|---|---|
| - Temperature | 3% | -D.O. | 10% |
| - pH | ± 1.0 unit | - ORP | ± 10mV |
| - Sp. Cond. | 3% | - Drawdown | < 0.3' |

c. Field Testing Equipment used:

| | Make | Model | Serial Number |

(continued on back)

d. Acceptance criteria pass/fail

| | Yes | No | N/A |
|---|---|---|---|
| Has required volume been removed | ☐ | ☐ | ☑ |
| Has required turbidity been reached | ☐ | ☑ | ☐ |
| Have parameters stabilized | ☑ | ☐ | ☐ |

If no or N/A - Explain below.
No minimum purge volume required for low-flow sampling. See comments on turbidity.

3. **SAMPLE COLLECTION:** Method: low flow, dedicated tubing.

| Sample ID | Container Type | No. of Containers | Preservation | Analysis Req. | Time |

# Low Flow Ground Water Sample Collection Record

Client: PPG Date: 12/20/17 Time: Start 1030 am/pm
Project No: Finish 1350 am/pm
Site Location: Garfield Avenue Group of Sites
Weather Conds: Collector:

**1. WATER LEVEL DATA: (measured from Top of Casing)**

a. Total Well Length 42 ft c. Length of Water Column 37.43 (a-b)

Casing Diameter/Material 2" PVC

b. Water Table Depth 4.57 d. Calculated System Volume (see back)

**2. WELL PURGE DATA**

a. Purge Method: Low Flow

b. Acceptance Criteria defined (see workplan)

| | | | |
|---|---|---|---|
| - Temperature | 3% | -D.O. | 10% |
| - pH | ± 1.0 unit | - ORP | ± 10mV |
| - Sp. Cond. | 3% | - Drawdown | < 0.3' |

c. Field Testing Equipment used: Make YSI Model Lamotte 2020we Serial Number

| Time (24hr) | Volume Removed (Liters) | Temp. (°C) | pH | Spec. Cond. (mS/cm) | DO (mg/L) | ORP (mV) | Turbidity (NTU) | Flow Rate (ml/min) | Drawdown (feet) | Color | Odor |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1105 | | [illegible] | 5.25 | 15.26 | 4.85 | -345.1 | 49.5 | 140 | 5.2 | Light Yellow | Organic-like |
| 1110 | 1.0 5.8 | [illegible] | 5.21 | 15.37 | 1.71 | -355.5 | 25 | 135 | 5.35 | Yellow-green | Organic like |
| 1115 | 1.25 | 5.83 | 5.21 | 15.39 | 1.49 | -344.3 | 610 | 135 | 5.38 | Cloudy-dark brown | Organic-like |
| 1120 | 1.50 | 5.95 | 5.17 | 15.50 | 0.84 | -346 | 965 AV | 135 | 5.39 | Yellow-green | Organic like |
| 1130 | 2.10 | 5.91 | 5.17 | 15.54 | 3.20 | -345 | 968 AV | 135 | 5.25 | " | " |
| 1140 | 2.15 | 5.91 | 5.23 | 15.48 | 0.20 | -334 | 794 AV | 135 | 4.52 | " | " |
| 1155 | " | 5.90 | 5.30 | 15.64 | 0.07 | -337 | 23 | 135 | 4.80 | " | " |

↳ NTU

(continued on back)

d. Acceptance criteria pass/fail

| | Yes | No | N/A |
|---|---|---|---|
| Has required volume been removed | ☐ | ☐ | ☒ |
| Has required turbidity been reached | ☐ | ☒ | ☐ |
| Have parameters stabilized | ☒ | ☐ | ☐ |

If no or N/A - Explain below.
No minimum purge volume required for low-flow sampling.

**3. SAMPLE COLLECTION:** Method: From Teflon Tubing

| Sample ID | Container Type | No. of Containers | Preservation | Analysis Req. | Time |
|---|---|---|---|---|---|
| ① 114-MC-PZ103-20171220 | | 2 | None | SVOC | ~~1320~~ 1320 |
| ② " | | 3 | HCL | VOC | " |

Comments Screen interval 37 - 42 ft bgs. Pump set at 39.5 ft bgs. Stick issues with locking flow cell. Tubing secured and leaking issues minimized. Issues with turbidity.

Signature Date 12/20/17

114-MW43A

# Low Flow Ground Water Sample Collection Record

Client: PPG Industries  Date: 4/17/18  Time: Start 0840 am/pm
Project No: 60550261  Finish _____ am/pm
Site Location: Garfield Avenue Sites
Weather Conds: Cloudy 40's  Collector: J. Angelone Alan B

**1. WATER LEVEL DATA: (measured from Top of Casing)**

a. Total Well Length 12 ft  c. Length of Water Column 11.88 (a-b)  Casing Diameter/Material 2" PVC

b. Water Table Depth 0.12 ft  d. Calculated System Volume (see back) _____

**2. WELL PURGE DATA**

a. Purge Method: Low Flow Bladder Pump

b. Acceptance Criteria defined (see workplan)

| | | | |
|---|---|---|---|
| - Temperature | 3% | -D.O. | 10% |
| - pH | ± 1.0 unit | - ORP | ± 10mV |
| - Sp. Cond. | 3% | - Drawdown | < 0.3' |

c. Field Testing Equipment used:

| Make | Model | | Serial Number |
|---|---|---|---|
| YSI | 600XL | Pine# | 01F0657 |
| LaMotte | 2020ue | Pine# | |

| Time (24hr) | Volume Removed (Liters) | Temp. (°C) | pH | Spec. Cond. (mS/cm) | DO (mg/L) | ORP (mV) | Turbidity (NTU) | Flow Rate (ml/min) | Drawdown (feet) | Color | Odor |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 0910 | | 11.16 | 6.91 | 1.889 | 0.24 | -82.9 | 89 | 120 | 0.2 | Opaque tan | none |
| 0915 | | 11.20 | 6.92 | 1.884 | 0.36 | -100.0 | 74 | 120 | 0.2 | ↓ | none |
| 0920 | | 11.23 | 6.94 | 1.880 | 0.49 | -106.6 | 88.5 | 120 | 0.3 | | none |
| 0925 | | 11.21 | 6.95 | 1.880 | 0.53 | -103.0 | 49.9 | 120 | 0.3 | | none |
